The
ProSpeed™ 386
desktop.

To understand
its massive
power,

In the past, people who were serious about their computers have had a serious dilemma.

They could either buy a powerful desktop and give up any thoughts of portability. Or get a laptop, and forget about expansion and connectivity capabilities.

But never could they find a

computer flexible enough to give them both.

Until now. With the ProSpeed 386 from NEC.

As you'd expect from a powerful 386 desktop, it runs at a swift 16MHz, has seven expansion slots and up to four drives. So it can handle anything you throw its way.

And when you want to take it

on the road, it's still a high-powered computer. The laptop unit is available with either a 40 or 100 MB hard disk. It's also battery operated and has up to 10 megabytes of memory. There's even a paper-white Monograph™ screen with EGA resolution that provides the readability

you have
to take it
apart.

and graphics capabilities of
a full-sized CRT.

All this and total connectivity capability, too. When you want to turn it back into a desktop, you merely slide the computer into a unique Docking Station™ that never leaves your desk. It contains two standard drive bays as well as the

capacity for four full-sized cards. So in a matter of seconds, you're fully integrated back into your office.

No manual reconfiguring.
No phone lines to connect.
No cable hookups.

What's more, for a computer with this kind of flexibility,

the price isn't a hassle either. So if you'd like us to continue taking the ProSpeed 386 apart, call NEC Home Electronics (USA) Inc. at 1-800-FONE-NEC. Or, if you'd like to dissect it yourself, call for product literature at 1-800-826-2255.

Bigger—

Vfeature Deluxe™ lets your DOS system use hard disks it thought it couldn't, all in one bootable piece—no artificial partitions! You can even span your old drive with the new one for more capacity. Use RLL, ESDI, or SCSI, and laugh at DOS partition limits. \$120

DUB-14™ takes a different approach to drive expansion, stretches your AT's Drive Table to support the drive YOU choose! Comes with setup and low-level format routines, and it's OS independent. \$95

Faster—

Vcache™ accelerates disk operations, avoids repetitive accesses by storing data in RAM as you read it so it's there for you the next time you need it—no waiting! Works with any type of memory, caches up to 15 Mb, bundles accelerators for your diskettes, screens, and keyboard. \$59.95

Vopt™ saves head motion by eliminating DOS file fragmentation. In a few seconds at boot time, Vopt arranges all your files neatly in contiguous clusters so you won't waste any time reading them back. Bundles timing and diagnostic utilities. \$59.95

Safer—

Vlock™ protects your system and its data from vandals and accidents. System access passwords control booting, activity menus decide who does what to which files, even locks out Ctrl-Break during boot! \$135

Easier—

Vtools™ is a slick set of disk management tools for DOS and OS/2. Display directories in whatever order you like, browse files and change or delete them, compare and update multiple versions, find and manipulate categories of files, and more! \$49.95

WHAT'S INSIDE

Never before has \$2.95 been worth so much to so many. There was a time when \$2.95 bought a frock coat and breeches. But even with that degree of buying power, it couldn't command 25,000 hours of work by 60 people testing and reviewing 104 386 PCs.

No other computer publication has ever attempted such a feat: to hands-on-test every 80386-based desktop computer in existence. The closest another magazine came was a roundup of 24 20-MHz 386s, and the highest number *PC Magazine* reviewed at one time was 15.

Team 386 began last summer in the PC Labs conference room with just two editors, one project leader, a free-lance writer, and three or four assorted techies. In theory we were assembled to flesh out the authors' guide, but the first questions to surface focused on more-immediate practical concerns. Where are we going to put them all? How will we get them photographed? What if there are 200 of them out there?

The last question led to a debate that went unresolved through a full 6 weeks of editorial meetings. Associate editor Ed Perratore and I, who worked together to produce this issue, were struck by something close to terror at the thought of simply running out of inventory and Labs space. We could handle 100 computers, but could we handle 150? Or more?

Writing, testing, editing: you name it. Team 386 did it—over 25,000 hours of hands-on work to review 104 computers.

We thought of various "filters" to screen out the expected overflow; the ideas ranged from cutting out 16-MHz machines to eliminating 386s with chips oscillated beyond their ratings. But in the end we surrendered ourselves to Fate and the magical process of vendor dropout. *PC Magazine's* comprehensive special-issue format survived the process.

The trivia doesn't end with an accounting of man-hours. The features table that appears in this issue, when printed out on a dot matrix printer, covers a 10- by 12-foot office's floor. The number of electronic-mail messages ferried among editors, reviewers, and labs personnel totals over 500. But more important than these statistics is the shelf life of this issue—counted not in hours or square feet, but in years.—Stephanie K. Losee

PC Magazine: The Independent Guide to IBM Standard Personal Computing (ISSN 0898-8507) is published bi-weekly except in July and August for \$7.97 per year (12 issues), \$6.97 for two years, and \$6.97 per year. Additional postage \$1.00 per copy or \$22.00 per year for Canada and all other foreign countries. Ziff-Davis Publishing Co., a division of Ziff Communications Co., One Park Ave., New York, NY 10019. Second-Class postage paid at New York, NY 10019 and at additional mailing offices. POSTMASTER: Address changes to PC Magazine, P.O. Box 54009, Boulder, CO 80521-4009.

The new BigBin holds five times more, so you feed it five times less.

**BigBin.
1000-sheet
capacity for
Canon SX,
Ricoh 4150 &
4080/4081
engine
laser printers.**

The BigBin™ sheet feeder replaces your laser printer's old 200-sheet paper tray to give you 1,000 sheets of paper. That means you spend more time working on printing jobs, and less time refilling paper.

Impressive numbers Think of BigBin as a motorized paper tray that lets you load 1,000 sheets of letter-size paper. All at once. You can even add a kit that handles legal-size.*

Even high-volume and multiuser environments get up to two hours of continuous printing. Without the interruption of another empty paper tray.

Simple addition All it takes to multiply your paper-handling capacity is a little addition. Just replace your printer's paper tray with the 1,000-sheet BigBin and plug it into the wall.

Despite the big name, BigBin needs only about a foot of space in front of your printer, and it weighs in at only 14 pounds.

A multiple of three BigBin is available in three models that connect to laser printers

with Canon SX¹, Ricoh² 4150 and Ricoh 4080/4081 engines.

The Canon SX works in the QMS-PS[®] 810, KISS[™] plus and HP[®] LaserJet Series II[®]. The Ricoh 4150 supports the QMS Lasergrafix[®] 1510, QMS SmartWriter[®] 150 and Texas Instruments Omnilaser[™], models 2015 and 2115. The Ricoh 4080/4081 series includes the AST TurboLaser[®], the DEC LN 03[®], and Texas Instruments Omnilaser 2108.

All three BigBin models are available exclusively through Laser Connection[™] dealers. For more information on how BigBin can maximize your paperhandling, call Laser Connection at **1-800-523-2696** for the dealer nearest you.

And be sure to ask for *The Sourcebook*[™]—our exclusive catalog filled with the latest laser printer products and enhancements.

* Fits Canon SX and Ricoh 4150 engines.

COVER STORY

80386: The Power and the Glory

Join in *PC Magazine's* celebration of the 386-based personal computer—an entire issue devoted to its technology, performance, and potential. In the most comprehensive 386 roundup ever published, we test and review a total of 104 desktop PCs representing 58 companies in all.

Editor-in-chief Bill Machrone analyzes the 386 microprocessor's impact on computing in today's world and tomorrow's. And to give sharper perspective to our reviews, we size up the 386SX as an increasingly attractive option, reveal the truth—beyond the rumors—about Intel's 486 chip, and step you through a smart buying plan so that you choose a system you won't

regret later	95

HOW TO CONTACT THE EDITORS

The editors of PC Magazine want to hear from you. Complaints, questions, and, of course, compliments should be sent by letter to One Park Ave., New York, NY 10016—at's probably the best way to reach us. You can also reach us electronically via MCI Mail (our account number is 157-9301) or by leaving a note on PC MagNet when you're finished downloading the latest issue. If nothing but a business note will do, call us at (212) 503-5255.

We are unable to look up past stories, recommend products, or diagnose problems with your PC by phone. If you bought a product advertised in PC Magazine, are dissatisfied, and can't resolve the problem, write (do not call) Michael Grasso, Advertising Department, at One Park Ave. Include copies of correspondence.

PC Magazine is under no obligation to review unsolicited products. All submissions accepted for publication become the property of PC Magazine.

PC MAGNET

PC MagNet, an on-line service, is a source for PC Magazine's utilities (both programs and source code), the PC Labs Benchmark Test programs, and an index of articles printed in the magazine. Callers can upload submissions to PC Magazine's Productivity section and you forums to discuss articles printed in PC Magazine with the authors and other readers. PC MagNet provides electronic mail and a gateway to CompuServe. For more information see the Productivity section or call (212) 503-5108.

PERMISSIONS, REPRINTS

Material in this publication may not be reproduced in any form without permission. If you want to quote from an article or use PC Magazine's logos in conjunction with an Editor's Choice designation, write Jean Lammeword, Licensing Director, for information on agents, write Jennifer Lucke, Ziff Davis Publishing Co., One Park Ave., New York, NY 10016.

SUBSCRIPTION QUESTIONS

If you want to subscribe to PC Magazine, if you have a question about your subscription, or if you're moving, call or write: PC Magazine, P.O. Box 54693, Boulder, CO 80322; (800) 289-6129. A 1-year subscription (12 issues) costs \$64.97. Canada and foreign add \$37.00 per year. New subscriptions and address changes take 6 to 8 weeks to process. For back issues, write Felicia Hunter, Back Issues Department, PC Magazine, P.O. Box 5999, Cherry Hill, NJ 08034. Send \$8 per issue (check or money order, \$9 outside the U.S.).

Editorial and Business Office One Park Ave., New York, NY 10016.

Get out of the danger zone with Oracle's dBASE compiler

Announcing ORACLE Quicksilver

All the database Top Guns are flying SQL, the industry-standard data management language first delivered by Oracle. Now, ORACLE Quicksilver adds SQL and connectivity to your dBASE applications, so you can fly them into the 1990s.

Your ticket to the future

ORACLE Quicksilver is a compiler that turns your dBASE programs into fast, secure, multi-user applications that can access both distributed ORACLE and dBASE data. It delivers all the capabilities of dBASE, plus powerful extensions like windowing, graphics and user-defined functions. You can even add SQL statements to your dBASE programs for more powerful, flexible data access.

ORACLE database included

ORACLE Quicksilver comes with the ORACLE RDBMS. So you can get automatic indexing, comprehensive security, and mainframe-class data integrity.

Why wait until dBASE IV can talk to SQL Server?

dBASE IV doesn't talk to SQL Server yet. When it finally does, it will only talk to SQL Server on OS/2—not on any other operating system. Which means you'll still be isolated from corporate data on minis and mainframes.

Add connectivity to your dBASE applications today

Your ORACLE Quicksilver applications can talk to ORACLE SQL databases on your PC today. And with our optional networking software, you can build distributed databases across ORACLE programs on PCs, minis and mainframes—including IBM DB2 data.

No-risk Money Back Guarantee

Test fly ORACLE Quicksilver now. If you're not out of the danger zone in 30 days, return it for a full refund. **Limited Time Free Offer:** Order now and, for a limited time, you'll receive ORACLE SQL**Tutor*—our on-line SQL training program—absolutely free.

Call 1-800-ORACLE, ext. 4425 today.
Or fill out and return the attached no-risk coupon now.

Deskdrive A Winner!

High Performance, Aggressive Prices and GE On-Site Service!

GE Computer Service

PC MAGAZINE SAYS,
JANUARY 31, 1989

"In short: Austin Computer Systems has a winning combination of classy parts, smart design, high performance, and aggressive pricing, all backed by a GE on-site service contract. How can you lose?"

Austin 286/12.5 Cache Standard Features:

- Intel 12.5 MHz 80286 Processor
- GE 1 Year On-Site Service Contract
- 14" EGA Color Monitor
- 16 Bit Paradise EEGA Autoswitch Display Adapter
- 40 MB-25 ms Super Fast Access Hard Drive
- 1:1 Fast Transfer Interleaving Controller Card
- 32K High Speed Hard Disk Cache
- Super PC Kwik Disk Caching Software
- 1 MB RAM (expands to 4 MB on board, 16 MB total)
- Shadow RAM Caching (BIOS Caching)
- EMS LIMM 4.0 Support
- American-Made MotherBoard
- 3.5" 1.44 or 5 1/4" 1.2 MB Floppy Disk Drive
- Phoenix BIOS
- Keytronics Enhanced 101 Keyboard
- 2 Serial Ports & 1 Parallel Port
- 1 PS/2 Mouse Port
- Clock with Battery Backup
- 80287 Math Co-Processor Socket
- FCC Class B Approved
- Users & Technical Reference Manual
- Built-in Setup & Diagnostics Program
- Fully DOS & OS/2 Compatible

Fully Loaded System . . .

Complete 286/12.5 Cache with EGA Color Monitor, 40MB Hard Drive, 1MB RAM, and 1 Year GE On-Site Service Contract. \$2295.00

1:1 hard drive controller	YES	
Disk caching software (rated as #1 in industry)	YES	
32K hard drive cache	YES	
1 full MB of RAM	YES	
Shadow RAM	YES	
Surface mount construction	YES	
VLSI technology	YES	
I/O ports fully integrated	YES	
American-made motherboard	YES	

Equally Equipped...The Competition Simply Costs More!

Our prices include a VGA color monitor, 16 bit VGA color adapter, screaming fast access hard drive, GE 1 year on-site service contract, performance boosting cache, and American made quality.

Extraordinary computers . . . at ordinary prices!

The Austin 286/16 Slim Line includes a VGA color monitor, 16 bit VGA color adapter, 40 MB-28 ms 1:1 hard drive, GE 1 year on-site service, 1 MB RAM, shadow RAM cache, Super PC Kwik disk cache software, 1.44-MB 3.5 floppy drive, 101 keyboard, a full array of I/O ports, and there are still 3 open, regular size expansion slots! Complete at \$2395.00

The Austin 286/20 Cache includes a VGA color monitor, 16 bit VGA color adapter, 40 MB-28 ms 1:1 hard drive, GE 1 year on-site service, 1 MB RAM, shadow RAM cache, Super PC Kwik disk cache software, 1.2 MB 5 1/4" floppy drive, 101 keyboard, and a full array of I/O ports. Complete at \$2695.00

The Austin 386/SX includes a VGA color monitor, 16 bit VGA color adapter, 40 MB-28 ms 1:1 hard drive, GE 1 year on-site service, 1 MB RAM, Super PC Kwik disk cache software, 1.2 MB 5 1/4" floppy drive, 101 keyboard, and a full array of I/O ports. Complete at \$2795.00

The Austin 386/20 Cache includes a 64K static RAM cache, VGA color monitor, 16 bit VGA color adapter, 80 MB-22 ms 1:1 hard drive, GE 1 year on-site service, 1 MB RAM, Super PC Kwik disk cache software, 1.2 MB 5 1/4" floppy drive, 101 keyboard, and a full array of I/O ports. Complete at \$1095.00

The Austin 386/25 HyperCache* includes a tremendous 128K static RAM cache, VGA color monitor, 16 bit VGA color adapter, 110 MB-17 ms ESDI hard drive, GE 1 year on-site service, 1 MB RAM, shadow RAM cache, Super PC Kwik disk cache software, 1.2 MB 5 1/4" floppy drive, 101 keyboard, and a full array of I/O ports. Complete at \$2795.00

Extremely High Performance!

Memory Caching, Shadow RAM, Integrated I/O, and Fast Access Hard Drives make our systems scream along . . . But we don't stop there! All Austin computers include 16 bit Video Adapters, the fastest available; 1:1 or ESDI Hard Drive Controllers to ensure the fastest access possible; and a hard Drive Caching Program so good that PC Magazine voted it the best in its class for 1988!

American Made Quality

Austin Computers, including the motherboards, are made and assembled in the USA! The latest design and manufacturing techniques allow us to offer the highest quality products at low prices!

A World Class Support Program

Featuring . . . GE On-Site Service! A Full One Year On-Site Service Contract from GE Computer Services is included with every Austin computer. Should your system fail, a GE technician will come to you and resolve the problem . . . Usually within 24 hours!

Unlimited Toll-Free Support . . .

If you require assistance for any reason, call our Toll Free 1-800 number. Our highly trained support personnel are available six days a week.

30 Day Money Back Guarantee . . .

If you're not satisfied for any reason, just return your system within 30 days for a full refund on the hardware price.

Fully Loaded Systems

We configure every Austin computer to include a Monitor, Video Adapter, Hard Drive, Floppy Drive, Keyboard, and a full array of I/O ports . . . If you desire a custom configuration, or additional options, just tell our sales personnel how you want it!

IBM, AT, PS/2, AND PS/2 ARE TRADEMARKS OR REGISTERED TRADEMARKS OF THE IBM CORPORATION. OTHER BRANDS AND PRODUCT NAMES AND TRADEMARKS ARE REGISTERED TRADEMARKS OF THEIR RESPECTIVE OWNERS. FOR EXACT DETAILS ON WARRANTY, CALL OR WRITE: GE COMPUTER SERVICE, GE, AND THE GE LOGO ARE ALL TRADEMARKS OF THE GENERAL ELECTRIC CORPORATION. PC MAGAZINE EDITORS CHOICE JAN. 31, 1989.

Only the new 44MB Bernoulli™ bridges the operating system gap. To transfer files between PCs, PS/2s™ and Macs, or between DOS, OS/2™ and Finder,™ just transfer the cartridge. For large amounts of data, Bernoulli is easier and cheaper than a LAN.

Get a handle on data transportability. Only the 44MB Bernoulli Disk Cartridge takes 1000Gs of shock without data loss—that's 6-8 times tougher than other removables and the only one you can drop from a desk top and not lose data.

Unlike fixed disks, removable Bernoulli Disk Cartridges can be locked away for the ultimate security. And only Bernoulli automatically checks and replaces marginal sectors to protect your data better than hard disks—fixed or removable.

WHAT DO YOU MAKE OF A THAT DOES MORE TH

You make sure you see it. Because no mass storage system anywhere, made by anyone, does all the things the new 44MB Bernoulli does so well. Or so fast—with access in 22ms. Or so affordably—at as little as

The new 44MB Bernoulli makes other backup systems a waste of time. It's 3-4 times faster than tape, and can back itself up in as little as 3 minutes.

The new 44MB Bernoulli gives you the performance of a hard disk with an effective access time of 22ms, but never fills up. When one Disk Cartridge is full, there's another. And another. And...

At \$2.84 per megabyte, the new 44MB Bernoulli Disk Cartridges are a penny-pinching place to put data. They deliver up to 5 times more storage per dollar than any hard disk, and even more than floppies.

MASS STORAGE SYSTEM AN MASS STORAGE?

1/5th the growth cost of other systems. And it's from Iomega, the world's number one removable mass storage company. So make time to call 1-800-342-8838 and find out about it. Because no matter what your mass storage problems, the new 44MB Bernoulli makes an ideal solution.

IOMEGA
Never ending storage solutions.

Bernoulli is a trademark and Bernoulli Box II is a registered trademark of Iomega. PS/2 is a trademark of IBM. OS/2 is a trademark of Microsoft. Finder is a trademark of Apple Computer, Inc.

More power to the people.

ORACLE has led a revolution in PC relational database technology. More power. More portability. More connectivity. More reasons than ever to make ORACLE your corporate standard database.

New tools with even more power.

We're proud to announce our newest release—Professional ORACLE Version 5.1B. Now you can run your applications in OS/2 or in protected mode above 640K in MS-DOS. So you have more room for more powerful applications. And those same applications run unmodified on almost all workstations, minicomputers and mainframes.

Version 5.1B delivers a new level of power to your PC developers including the latest versions of:

- **SQL*Forms®** NEW! Enhanced 4th-generation application development environment.
- **SQL*Menu®** NEW! Flexible interface builder for defining complex menu systems.

• **SQL*ReportWriter™** NEW! Non-procedural development and runtime powerhouses for producing any report.

• **SQL*Plus®** Oracle's ANSI-standard SQL query and administration tool.

• **Pro*C™** The C-language pre-compiler and subroutine call interface to ORACLE.

Learn SQL on us.

Learn the language of the revolution. Order Professional ORACLE today for \$1299 and we'll include ORACLE SQL*Tutor, a nine-module PC-based SQL instruction program that sells by itself for \$199.

Try ORACLE for \$199.

Our Trial Version is identical to Professional ORACLE, but can't be used in networked configurations and allows a maximum user database size of 1 MB. It's a powerful tool for prototyping your first ORACLE application. And its price can be applied to the purchase of a full Professional ORACLE license.

ORACLE®

COMPATIBILITY • PORTABILITY • CONNECTABILITY

Call 1-800-ORACLE1, ext.4431 today.

Money-back guarantee.

If you haven't tried ORACLE yet, now there's even more reason to join the SQL revolution. More tools. More power. If ORACLE 5.1B doesn't revolutionize the way you develop PC database applications, return it within 30 days for a full refund.

Call 1-800-ORACLE1 ext.4431, or an ORACLE MasterVAR today.

Dear Oracle

LETTERS TO PC MAGAZINE

BACK TO THE FUTURE

There is and always will be an important need to investigate and report new technology coming on-line in the industry. Remember, however, that you have an ever-growing base of installed users out here. Once potential PC buyers make the purchase, they are no longer so driven to know about the next level of technology. They need to know how to make better use of what they have.

I enjoy reading about the newest line of 20-MHz+ screamers, the best in multitasking software, and so forth, but I would like help in learning how to use what I already have to better advantage. I advocate that *PC Magazine* balance between these two extremes.

Robert P. Ward
Bonney Lake, Washington

There has been a great deal of writing in *PC Magazine* about the latest in hardware, especially the 386 chip. I like the emphasis on different utilities, and I find your reviews to be thorough and specific. Keep up that good work, but remember there are millions of us out here who work on XT's!

George Wilkinson III
Glenbrook, Connecticut

QUICK KUDOS

I want to thank you for the vast amount of time and money I've saved by using the tips and utilities found in each issue of *PC Magazine*.

Scott E. Loveless
Elmwood Park, New Jersey

Thanks for giving me the information to be a smart customer. Based on your review ("The Best of 1988," *PC Magazine*, January 17, 1989), I purchased *PFS:First*

Choice despite encountering difficulties with computer salesmen. *PFS:First Choice* is great, and the integrated color graphics make my reports look super!

Lowell Toms
Cincinnati, Ohio

MORE SHAREWARE, PLEASE

Bill Howard did a great injustice when he insinuated that no great software shipped in 1988 ("The Best of 1988," *PC Magazine*, January 17, 1989). He obviously ignored a large portion of the market: shareware.

Shareware is an excellent way for us "common users" to get outstanding products at a reasonable price, on time. Not everyone requires the ultimate product from some distant software house that cannot or will not support the user. For most of us, shareware is a practical, alternative way to greater productivity.

James R. Plosay
Monterey, California

LOOKING FORWARD

I enjoyed and appreciated the reviews on tax-preparation software (After Hours, *PC Magazine*, February 28 and March 14, 1989), but an important piece of information was not discussed: yearly upgrade costs.

J. Gregory Simpson
Savannah, Georgia

LIGHTEN UP, GUYS!

In an otherwise outstanding publication, the After Hours section is a big bore! Most

of the time, the products reviewed there are more business-oriented and stuffy than the rest of the magazine. On the rare occasion when you review an actual entertainment-oriented program, it is invariably one that has already become an industry standard for excellence and needs no review.

Despite what most of the computing world thinks, there are a great many high-quality entertainment programs and products available for the IBM PC. Why don't you start reviewing some of them?

Vasilios Spandagos
Tewksbury, Massachusetts

THE TRUE TEST

There appears to have been a lack of quality control in the testing of the multitasking environments ("When One PC Equals Four: 386 Multitasking Environments," *PC Magazine*, February 28, 1989). The more programs there are running concurrently under an operating system, the greater the time a task takes to complete. However, according to the benchmark tests, *Microsoft Windows/386* miraculous-

ly managed to actually run all of the *PC Magazine* benchmark tests up to 33 percent faster with four tasks running than with only three!

The second glaring error was that the times presented in the benchmark-test

VIEWPOINTS

LETTERS

charts were *only* the times required for the foreground program to complete, regardless of the number of background tests. Most tests involving multitasking environments that attempt to demonstrate performance degradation when adding more tasks do so by at least measuring the time it takes to complete all concurrently run programs in a specific test.

Brian J. Mullen
Tampa, Florida

In deciding how to test multitasking systems, PC Labs selected the criteria we felt would be of greatest interest to readers. We believe the degradation on foreground operation caused by background operations is an essential factor when you are judging a multitasking system. The results for background operation are less crucial since the foreground operation is occupying the user's time.

There was no error on the Microsoft Windows/386 results. We noticed the anomaly, ran the tests several times, and checked for possible mitigating factors. It's strange but true: three background operations will sometimes cause less degradation than two.—Ed.

YIVE LA DIFFERENCE

There isn't an issue of *PC Magazine* published in which someone isn't clamoring for the standardization of hardware or software, but frankly, I don't care if it ever happens. My computer has become as much a hobby to me as a business aid, and I enjoy the many hours I spend playing and trying to puzzle through its many little inconsistencies. If it were too logical and easy to use, I probably would have given up on it long ago. Say what you will, but I like DOS. Maybe I just don't know any better, but if so, I am blissful in my ignorance. I plan to spend many more years learning about and enjoying my computer.

Lloyd A. Walker
APO, New York

INQUIRING MINDS WANT TO KNOW

Over the last few years, the trend toward IBM-bashing has grown to the point where you might consider renaming your publication something more appropriate. "The IBM National Enquirer" ought to do nicely, or perhaps "The IBM Star."

William F. Zachmann's column was the proverbial last straw ("IBM at War with the World," *PC Magazine*, January 31, 1989). This column, combined with all the other anti-IBM snide remarks I have read in *PC Magazine*, has brought me to the conclusion that your magazine is never going to "grow up."

R. A. Dumon
Dunwoody, Georgia

OS/2 AHEAD

Although it may not be immediately obvious, based on your PC MagNet survey, it seems that the success of IBM's Micro Channel is assured ("The State of the PC

1988," sidebar to "The Best of 1988," *PC Magazine*, January 17, 1989).

My own prediction is that OS/2 will catch on faster than many users now believe likely. It is quite possible that by the end of 1989, we will see OS/2 versions of Lotus 1-2-3, dBase, Microsoft Word, WordPerfect, and various LAN servers.

Peter H. Strong
Los Angeles, California

A RICH HERITAGE

Stephen Manes might be interested to know that the language he inaccurately parodies has its roots in English as it was spoken during the reign of Elizabeth I ("Prodigy: It Don't Get No Better Than This!" *PC Magazine*, February 14, 1989), and it has been further developed and enriched for more than 200 years in the United States. I am proud of my origins and do not appreciate having them ridiculed.

Many of your readers are trying to teach themselves about computers. They start out knowing very little and try to progress from there. The information and advice in your magazine are a great help to the autodidact; the ill-tempered insults are not.

Alfred L. Wallace
Milwaukee, Wisconsin

THE COMPUSTAR[®] THEORY OF SENSIBILITY

$$C = at + mca^2 + eisa$$

Okay, we admit it may not be as profound as Einstein's Theory of Relativity. But, if you're a computer user, we bet it's a bit more, shall we say, "relative" — not to mention a whole lot more sensible.

The "C" stands for CompuStar[®] — the world's first and only multi-processor, convertible bus¹ microcomputer. And, as the theory states, CompuStar means AT, MCA and EISA compatibility — all in a single system.

A CONVERTIBLE BUS?

Each CompuStar features snap-in bus "modules" that let you convert from one bus standard to another — a PC/AT² bus, a PS/2 (MCA) bus... or both!

SNAP-IN PS/2
AND AT BUS MODULES.

Depending on configuration, you can have up to 13 AT and/or PS/2 bus expansion slots. Plus, when the new EISA bus becomes popular, we're licensed to offer it as well.

THREE COMPUTERS IN ONE.

Buscs are not the only thing you can reconfigure in a CompuStar. Each system can be equipped with any of three CPU Modules — an 8086, an 80286 or an 80386. Since the modules are interchangeable, you won't have to worry about buying the wrong computer system. We'll even let you trade-in your CPU Module toward the purchase of any of

the other more powerful modules.* But that's not all. CompuStar features an incredible seven disk/tape compartments that we'll gladly custom configure for you at the factory. No matter what your application, we can tailor fit a CompuStar to match it precisely.

CPU MODULES ARE INTERCHANGEABLE.

IT'S NUMBER ONE RATED.

If you're thinking a computer with as much flexibility as CompuStar would have to compromise something, like performance — think again. With a MIPS³ rating of 6.1, the CompuStar is one of the fastest, most powerful systems available. In fact, CompuStar's performance and flexibility so impressed *InfoWorld* magazine they gave it the highest rating of all hardware products tested in 1988! That's astonishing when you consider you can buy a CompuStar for thousands of dollars less than a comparably equipped system from IBM or Compaq.

If you're shopping for the next generation in personal computers, why not call us today at 803/796-7800 to arrange an on-site no obligation 30 day CompuStar[®] trial in your office.* Relatively speaking, it's the only sensible thing to do.

Wells American.

Graduate From Harvard.

"Graph Plus is an all-in-one business presentation powerhouse...in both drawing and chart/graphics realms."
PC Magazine - "Best of 1988"

*Buy Micrografx Graph Plus and get \$100 cash back.**

In the real world you need more than just a degree to make things happen. Fast and effective communication is the key. Graph Plus™ is the answer.

If you can use a mouse, you already know how to use Graph Plus. It has more chart types, more drawing tools, and greater flexibility than Harvard Graphics. Import data from any program. Point. Click. It's quick *and* easy. Paste your chart into other programs, from desktop publishing

applications and word processors, to spreadsheets and databases.

Join the Harvard Graphics alumni and graduate to Graph Plus. Send us your Graph Plus registration card and Harvard Graphics, and we'll send you \$100.*

Think of it as your graduation gift.

■ LETTERS

CHECK ALL THE ANGLES

I must agree with Phillip Anderson (Letters, *PC Magazine*, February 28, 1989) about the need for unbiased evaluations by your staff. Encouraged by Charles Petzold's enthusiastic review of the

■ The Okidata Laserline 6 comes with only 272K of RAM. The RAM can be extended to 656K with a \$400 memory cartridge, but memory boards are not supported.

Okidata Laserline 6 ("The 4th Annual All-Printer Review," *PC Magazine*, November 10, 1987), I purchased this printer last year only to discover that Petzold had left out some important information.

The Laserline 6 comes with only 272K of RAM, out of which only 128K is available for downloaded fonts and page formatting. The RAM can be extended to a total of 656K with a \$400 memory cartridge, but the printer does not support memory boards. In addition, the technical support service is minimal and costly.

Mike Vranjican
Franklin, Virginia

A CHANNEL'S TRUE PURPOSE

Channels are used to communicate with outboard peripherals, and memory access is a part of the function of the CPU and the DAT box, which performs Dynamic Address Translation ("Coproprocessing: Who Needs It?" Bill Machrone, *PC Magazine*, March 14, 1989). The channel may move data to or from memory, but the controlling of it is not the function of a channel.

Steven B. Olson
Bayonne, New Jersey

A LESSON FOR DVORAK

It is an old time-proven axiom that we always attack what we don't understand.

Might this be the underlying reason for John C. Dvorak's snide comments about Prodigy Services (Inside Track, *PC Magazine*, February 28, 1989)?

Among its different services, Prodigy provides free daily stock-market prices, bulletin board messages, an airline reservation system, banking and investment services, and weather reports. "It stinks"? No, Mr. Dvorak, you simply haven't learned to use it.

Lucien R. Greif
Chappaqua, New York

NO SOLUTION IN SIGHT

Bill Machrone's description of a book that teaches more about making viruses than stopping them ("Viruses: Sense and Nonsense," *PC Magazine*, February 28, 1989) reminds me of the education of the Army's Special Forces (Green Berets). Their training included a short course ostensibly on countermeasures to torture. The soldiers were taught, in graphic detail, some of the most brutal tortures ever devised by man. At the end of each description, when it came time to teach the countermeasures, the soldiers were told, "There are no known countermeasures."

What do you suppose the Army was really teaching the troops?

Steven Finell
New York, New York

CORRECTIONS/AMPLIFICATIONS

Jandel Scientific's *Sigma-Plot*, Version 3.1, supports both EGA and film recorders, runs from a batch file, and has excellent context-sensitive on-line help ("Scientific Graphing Software: Not Just a Pretty Picture," *PC Magazine*, March 14, 1989).

The correct telephone number for RightSoft Inc., maker of *RightWriter* 3.0 (First Looks, *PC Magazine*, February 14, 1989), is (813) 923-0244.

HOW TO WRITE TO PC MAGAZINE

Send letters to *PC Magazine*, One Park Avenue, New York, NY 10016, or upload to PC MagNet (see the Utilities column for access information).

All letters become the property of *PC Magazine* and are subject to editing.

They're All The Same.

Thanks to SOFTWARE BRIDGE.

Software Bridge converts documents from one word processing program to another. Converted documents keep the look and feel of one created on the target word processor—with tabs, indents, bold, underline, columns, fonts, footnotes, headers, footers and more—everything intact for immediate editing or printing. Software Bridge is the finest conversion software on the market today.

Converts Directly Between:

Q&A won PC Magazine's
1988 Technical Excellence Award
over all application software released
or upgraded in 1988.

AN EXCELLENT REASON TO HAVE TWO DATABASE STANDARDS.

Until now, File Managers couldn't handle corporate database needs, so corporations stayed with a single relational standard. Q&A 3.0 changed that. According to *PC Magazine*, Q&A "enables us to do things we could never do before." And according to corporations, Q&A is the new database standard. For managers.

Q&A delivers database power with the ease you'd expect from the award winning* #1 File Manager. It elegantly handles tasks like multi-file lookup and reporting, programmable database forms, and record locking on networks... tasks previously reserved for relational databases. And, with dBASE import/export, English language query, and a top-rated Executive Word Processor for easy mail merge, Q&A lets managers do things they could never do with a relational

database. Without expensive training or support.

That's why corporations buy relational databases for powerful applications created by programmers. And Q&A for powerful database solutions any manager can create himself. Call for a free Q&A demo disk (to celebrate our award, every 100th caller† wins a free Q&A). Technical Excellence. It's an award-winning reason for a double database standard.

■ LORI GRUNIN

PC ADVISOR

Managing the expanded memory in your 80386-based computer, booting up with your NumLock key off, and finding a game card for the PS/2.

MANAGING 386 MEMORY

I assume that I am not the only one who wants to upgrade from a 286 to a 386 machine, intends to stay with DOS, and needs expanded memory. But I am told that no one builds an EMS board for 386 machines. Why? Is there software that serves the same purpose?

Kenneth Wellner
Mamaroneck, New York

You're absolutely right that no one makes expanded memory boards for 386s—they're not really necessary. Software emulation of LIM EMS on a 386 machine is plenty fast, since these machines use 32-bit memory. With 286 machines, however, you're better off using an expanded memory board: emulating EMS in the PC AT's 16-bit extended memory can be extremely slow.

If you insist, you can use a 16-bit board from your old AT in a 386, but you'll miss the performance advantages of 32-bit memory.

Along the same lines, a 386 machine is perfectly capable of using the same expanded memory manager (EMM) software as a 286. But for optimal performance, you should use software that will take advantage of the unique memory-management capabilities built into the 80386 chip—in particular, its ability to re-map extended memory into any address.

Qualitas and Quarterdeck Office Systems offer expanded memory managers that should give you everything that you need. Both of these products were listed among PC Magazine's Best of 1988 (see

the issue of January 17, 1989).

Both products emulate LIM EMS 4.0, just as most EMMs do on ATs. But as a 386-based bonus, they also unclutter your precious base 640K by loading well-behaved TSRs into high memory while re-mapping your system's ROM—generally stored in 16-bit memory—into faster 32-bit RAM (a process known as shadowing). And all this comes without sacrificing more than 2K of conventional memory.

These products are not identical, as their loyal fans are quick to point out. QEMM-386 (\$59.95 from Quarterdeck Office Systems, 150 Pico Blvd., Santa Monica, CA 90405; (213) 392-9851) ferrets out the fastest RAM chips in your system to use as your DOS-accessible 640K, and it can load device drivers into high memory. In addition, QEMM-386 is optimized for use with Quarterdeck's multitasking environment, DESView.

On the other hand, 386-to-the-Max

(\$74.95 from Qualitas Inc., 8314 Thoreau Dr., Bethesda, MD 20817; (301) 469-8848) seeks out segments of unused memory in the 384K reserved for video RAM, giving you additional base RAM to play with. How much memory you gain depends on your graphics adapter. The newest release of the program, 386-to-the-Max Professional, should be out by the time you read this; it will be able to load device drivers into high memory as well.

NUMLOCK WOES

When the new 101-key Enhanced keyboards came out, I was glad to see a second set of arrow keys. Our new Zenith, however, boots up with the NumLock key on. Every time I use my word processor, I invariably type numbers when I'm trying to edit or move within the program. Is there any way I can turn off the NumLock key from within my AUTOEXEC.BAT?

Daniel J. Reed
Manhattan, Kansas

■ For optimal performance, use an EMM that harnesses the unique memory-management capabilities of the 80386 chip.

You're not alone. Many of the new ROMs boot with NumLock turned on. Not a major crisis in the world of computing, just an action that requires an annoying extra keystroke (which is often irritatingly belated).

But never fear: PC Magazine's NUMLOCKOFF.COM will solve your problem. You can download the program from the Utilities Forum on PC MagNet; then just stick it into your AUTOEXEC.BAT and forget about it. (See the "By Modem" sidebar in this issue's Utilities column for instructions on how to download programs from PC MagNet.)

■ PC ADVISOR

PLAYING GAMES ON THE PS/2

I was hoping you could help me with what I think is one of the largest irritations of the IBM PS/2 series: the lack of a game port for a joystick. I would appreciate it if you could tell me who makes a game port for the MCA bus, because one is greatly needed by users everywhere.

John E. Stafford
Greensboro, North Carolina

Many people agree with you that the PS/2 isn't just for business anymore. Therefore, I'm pleased to announce that, yes, Virginia, there is a game card for the Micro Channel. CH Products (1225 Stone Dr., San Marcos, CA 92069; (619) 744-8546), maker of peripherals for game players, sells a \$79.95 game-control adapter called GameCard III Plus-MCA, a Micro Channel version of its GameCard III Plus. If you prefer to play games à deux, \$89.95 buys the card plus a Y-cable that allows

you to connect two joysticks.

The GameCard's external switch lets you choose one of three sensitivity levels, ranging from 70,000 to 200,000 ohms, to

■ If you prefer to play games à deux, invest in a Y-cable to connect two joysticks.

match the needs of your application. AutoCAD, for instance, requires a lower sensitivity level than does Centipede. CH Products designed the GameCard to avoid the timing problems that may be inescapable with cards meant for machines with slower CPUs—it can be used in machines with

clock speeds as high as 20 MHz.

In addition, the GameCard supports four analog inputs, such as paddles, and four digital inputs, such as push buttons. A joystick with two buttons counts as two digital and one analog input; hence the card's ability to support two joysticks.

To install the 8-bit card, you merely slip it into an empty slot—there's no need to run the PS/2 setup program. One caveat: the instructions that come with the card include a one-line BASIC program to ensure that everything is working properly, but this program goes into an infinite loop that can only be broken by rebooting.

Let the games begin!

ASK THE ADVISOR

Send your questions to PC Advisor, PC Magazine, One Park Avenue, New York, NY 10016, or upload to PC MagNet (see the Utilities column for access information). Please specify your equipment. ☐

1-2-3 works better when everyone works together.

Now you can harness the power of Lotus® 1-2-3* throughout your work group, department, even your entire organization.

@Liberty® lets you create worksheet applications in 1-2-3, and distribute "execute only" copies that other users simply can't alter. @Liberty lets you lock in formulas, hide macros, freeze labels and formats, and define input cells in your application exactly the way you want. So you're guaranteed security, and consistent, reliable results from everyone that uses them. Even people with no 1-2-3 training. In fact, they don't even need a copy of 1-2-3 to run @Liberty applications. So you'll save money, too.

@Liberty is perfect for group projects, electronic

business forms, data collection and consolidation. And for controlling the integrity of all the 1-2-3 data you deal with.

Get your whole team going in the same direction with @Liberty. Call now for complete information.

CIRCLE 334 ON READER SERVICE CARD

Look great without a lot of makeup.

Transforming a blank piece of paper into a document that's as appealing as this calls for plenty of page makeup.

But if you're like the rest of the world, you've barely got enough time to write, let alone struggle with formatting.

Well, now you don't have to. Because Am! is here. And it's about time.

Am! can save you about three quarters of the time you're currently spending on everything from simple letters and memos to presentations, reports and newsletters.

How?

By letting you write your words and make up your pages *at the same time*.

In fact, you don't have to do any makeup at all.

Because Am! gives you over two dozen pre-designed style sheets that let you instantaneously transform

plain words into gorgeous documents.

Am! looks a lot like a desktop publisher. And the documents you can create with it have desktop publishing written all over them.

But as you'll quickly discover, Am! is a serious word processor that makes the most of Microsoft® Windows.

(If you don't have Windows, don't

worry. A runtime version is included.) You can integrate text and graphics. Import both from other programs. And admire your documents from four fully editable page views.

Right now, we suggest you admire the \$199 price tag and

"A fast personal word processor... that makes it easier to produce great-looking reports, letters and memos than any other PC word processor."

PC/Computing

"Surprisingly sophisticated... quite simple to learn and use... among the most powerful of the executive word processors."

Michael J. Miller, in InfoWorld

"Makes desktop publishing class output a snap for the average user."

William Zachmann, in PC Week

CIRCLE 131 ON READER SERVICE CARD

WE PROUDLY ANNOUNCE
THE BIRTH OF

THE DUAL DISC

 Some babies simply change the world. Take ours, for example. The Dual-Disc Mirror (welcome, welcome) consists of two identical hard discs. All data is written simultaneously on both discs to rule out data loss. We call it 'mirroring'. And we call it a revolution.

A back-up can be made from one of the discs onto back-up media without affecting the system users. And there is more. Like alternate read. When information is needed from the disc, DDM issues read instructions alternately to each of the two discs. This results in an increase in speed because the system does not have to wait for one disc to finish each operation. And, as an option, both discs can be reorganised automatically at any time you preselect. Programs and data remain accessible in a flash.

The Dual-Disc Mirror works on Unix.[®] Our software is in use at several international organizations, companies that depend on their data files around the clock. From the moment they were installed, they simply never failed. So our baby will go a long way.

CIRCLE 729 ON READER SERVICE CARD

Introducing the world's first cellular computer.

Now cellular communication is more than just talk.

Get all the power of portable computing and the convenience of cellular communications too. Meet the ITC 286 CAT from Intelligence Technology Corporation. It's two technologies in one efficient package, ready to work at a remote jobsite or an office downtown.

This unique patented portable offers fail-safe transmission. The built-in cellular telephone and error-correcting modem let you trust valuable data to the cellular network — even during hand-off and channel changes.

And it provides more than 2 hours of battery-powered operation, automatically converting to 110/220V or to 12V for in-vehicle use. Batteries can even be recharged during operation.

The ITC 286 CAT is IBM PC/AT-compatible and features 12 MHz processing, 640K memory,

a high-speed hard disk drive, a high-resolution EGA screen, full-size keyboard and more. The numeric keypad and built-in speakerphone simplify your voice and data calls. A headset and cellular telephone handset are included for more versatility. And it all comes in an easy-to-carry case.

For a complete workstation just take along a portable printer. Or connect with other ITC 286 CATs for an instant mobile LAN. It's a brand new way to keep your company on the move.

If you thought cellular communications was all just a lot of talk, we invite you to hear and see more about this technological merger. ITC made a remote possibility reality. For details call: 1-800-356-3493.

33-MHz 386: Zenith Breaks the Ice

PC PREVIEW

BY LORI GRUNIN

The novelty has begun to wear off, and we can finally stop ooohing and aahing over those 25-MHz speed demons, right? Nope. Now it's time to start all over again with the even speedier demons made possible by Intel's 33-MHz 80386 chip.

The first 33-MHz machine to grace the benches of PC Labs bears the Zenith logo and a \$7,999 base price comparable to that of a high-end 25-MHz box. Unfortunately, the performance of our evaluation machine, an early production unit,

was also comparable to that of a high-end 25-MHz system.

The processor in the Zenith Z-386/33 operates roughly 30 percent faster than a 25-MHz chip, so why doesn't the machine reflect the higher speed? In a word: memory. Zenith chose to hobble the Z-386/33 by populating the motherboard with 100-nanosecond DRAM; most high-end systems today use nothing slower than 80-ns chips.

In addition, the standard configuration comes with only a 16K memory cache—compared with the 32K or 64K caches of the higher-performance machines.

The news isn't all bad, however. The Z-386/33's cache can be easily upgraded to 32K or 64K, a move sure to improve performance, and the machine seems designed for speed in most respects.

Speed Features

Governed by a Zenith-designed, NEC-manufactured controller, the Zenith's standard 16K memory cache uses 15-ns. memory and features Zenith's 16-layer posted write queue, which stores writes to memory until the CPU becomes idle. Rather than putting the cache memory on the motherboard, Zenith places it on a card that

fits into a proprietary internal slot, making cache board replacements and upgrades a breeze.

Behind the cache, the standard 2MB of 100-ns. RAM can be upgraded to 32MB on the motherboard, using 1MB or 4MB SIMMs (when the latter become available). 32MB of additional 32-bit slotted memory brings the possible system total up to 64MB.

In addition to the Model I—outfitted with a 1.44MB floppy disk drive and an I/O controller with one parallel and two serial ports—Zenith offers two hard disk configurations.

Lucid 3-D Adds Graphics, Imports/Exports 1-2-3 Files

PC HANDS ON

BY CRAIG STINSON

When the first version of Personal Computer Support Group's *Lucid 3-D* appeared just over a year ago, First Looks praised it as an "inspired little spreadsheet that solves all the usual problems in most unusual ways." In its new garments, as Version 2.0 from Dac Software, it is still inspired but rather less "little," and it now solves some problems it ignored before.

The essentials are unchanged: *Lucid 3-D* remains a budget-priced, memory-efficient, mouse-hospitable pop-up spreadsheet that offers linking, built-in auditing, a rich macro language, and an assortment of other conveniences.

But Version 2.0 sports 15 major improvements, according to Dac Software, the company that took the product over in 1988.

In TSR mode, the original *Lucid* handled only about 60K of data at a time. You could

(continued on next page)

Lucid 3-D lets you simultaneously view up to nine spreadsheets and an optional calculator. Calculator values can be plugged directly into worksheet cells.

(continued from page 33)

beyond that, but only by taking advantage of the program's worksheet-linking capability. Now you can build much larger structures with as much or as little modularization as you like.

Lucid 3-D 2.0, in either its standalone mode or as a TSR, supports up to 8MB of expanded memory. If you don't have an EMS board, you can still take advantage of a command-line switch to increase Lucid's capacity in pop-up mode. The command-line switch also lets you restrict the maximum worksheet size to as little as 32K, making Lucid one of the few spreadsheet programs able to run on 256K machines. Since the program itself consumes only 141K (compared with about 200K for Lotus 1-2-3, Release 2, and much more than that for Quattro, SuperCalc 5, and Microsoft Excel), you can now build pretty hefty worksheets without having to break

ways. Before, when you made an external reference, Lucid cleared the calling worksheet from the screen to show the supporting worksheet. Now you have the option of seeing both at once—you can keep as many as nine linked or unlinked worksheets visible at any time. You'll also find a new one-step procedure for linking a range in one worksheet to a range in another, as well as an auditing option that shows all current linkages in a tree diagram.

While these improvements are convenient, the change that will matter most to heavy-duty linkers concerns recalculation. At recalc time, Lucid now evaluates each sheet in a chain only once, regardless of how many times each sheet is referenced. In a complex web of interrelated files, the time savings brought about by this enhancement can be dramatic.

The old Lucid was strictly a spreadsheet; it did neither databases nor graphics. The new one includes GX, a separate

Lucid 3-D generates graphs in three-dimensional perspective. Options allow you to change a graph's orientation and transpose data series and points.

Lucid 2.0 takes a similar plug/unplug approach to data file conversion. Bidirectional translation utilities are now provided for 1-2-3, dBASE II and III, comma-delimited ASCII, and files created by Dac Easy Accounting. Each is a standalone TSR consuming about 10K. With the appropriate utility installed, you can load and save foreign data files just by specifying the appropriate extension: .WK1 for 1-2-3, Release 2, for example.

The ability to read and write 1-2-3 files directly is a plus, but it doesn't remedy a major shortcoming of Lucid 3-D: the program isn't very compatible with the industry-standard spreadsheet program. Lucid has neither database functions nor string functions, so 1-2-3 cells that use those functions contain the text "Cannot Convert on arrival in Lucid." Lotus 1-2-3 macros are ported over as useless string literals. Oddly enough, the translate utility doesn't even bother to preserve the numeric and date formats of your 1-2-3 cells, even though Lucid offers all of 1-2-3's formatting options and more.

The other major area of improvement in this release is in the macro language and development environment. Augmenting an already rich set, the language offers a few new looping and conditional directives, and a compiler has been added to the environment.

Serious programmers will appreciate the compiler, even though the entire Lucid macro

language is available through menus and keystroke recording. The compiler lets you add commentary to your macros using your favorite editor, and includes a C-like preprocessor with which you can mold and extend the language.

For spreadsheet work that does not require database functionality or a high degree of compatibility with 1-2-3, Lucid 3-D remains an extremely appealing product. It's fast, easy on memory, and inexpensive. Incomplete compatibility with 1-2-3 has historically been the kiss of death for innovative spreadsheet programs. Lucid 3-D 2.0 deserves to be the exception.

Lucid 3-D's new TSR graphics utility offers seven types of graphs. The utility occupies 123K but can be left unloaded to conserve memory.

them up into linked modules.

Of course, if you want to think modular, Lucid 3-D is glad to accommodate and encourage you. Worksheet linking is Lucid's last name, though the 3-D moniker is misleading. Lucid supports separate-but-linked sheets in the manner of Excel, not the multipage three-dimensionality offered by SuperCalc 5 and the forthcoming Lotus 1-2-3, Release 3.

Version 2.0 improves the linking of the original in several

123K TSR graphing utility. With GX installed, Lucid offers seven basic graph types, including some with three-dimensional perspective views.

The inclusion of graphics does not alter Lucid's profile as a lean and mean spreadsheet. If memory is at a premium, you can leave the graphics behind. Or you can simply pop out in DOS when you need a chart, invoke GX, then return to DOS and unload GX when you've finished graphing.

CIRCLE 446 ON READER SERVICE CARD

Zenith Z-386/33

(continued from page 33)

The Model 150 comes equipped with an 18-millisecond 150MB hard disk (\$11,490), while the Model 320's 320MB hard disk (\$13,499) boasts an average access time of 16 ms.

An ESDI controller with a 10-megabyte-per-second data transfer rate and 1:1 interleave further boosts the speed of these already fast drives. Despite the relatively poor showing on the DOS File Access benchmark test, the 16-ms. CDC drive in the Model 320 evaluation unit performed slightly faster than rated.

In another move to enhance speed, Zenith provides a combination of software and firmware—whimsically named Slushware—that shadows the 8-bit ROM into 32-bit RAM. For floating-point support, there's a socket for an 80387 or a Weitek 3167.

SuperSet Slots

Leaving behind the passive backplane architecture of earlier Zenith machines, the Z-386/33's motherboard looks much the same as most other desktop systems—with the exception of the expansion slots. Four out of the seven are Zenith's own 32-bit SuperSet slots, in which you can plug 8-, 16-, or 32-bit cards; the system automatically senses a card's

frequency and adjusts the bus speed accordingly.

One of the SuperSet slots is sacrificed to an I/O card with one parallel and two serial ports. The second serial port uses one of the machine's three punchouts.

In the Models 150 and 320, a Zenith Z-549 16-bit VGA card occupies one of the three remaining 16-bit slots. The benchmark test results for the card in our Model 320 evaluation unit were only average, but

drives and two hard disk drives. An excellent setup program accessible with the Ctrl-Alt-Ins key combination allows you to configure your system easily. Through one on-screen menu not only are you able to specify your hardware—memory, drives, and video—but you can also set a power-on password or choose to bypass the A: drive automatically when booting your system.

The SETUP program also lets you determine how many

The combination of a 33-MHz chip and the SuperSet slot architecture make the Zenith Z-386/33 a powerful and flexible desktop workstation.

Zenith is planning to bundle a Video 7 VGA card with the machine for buyers desiring better video performance.

On the Model 320, the half-height floppy disk drive and full-height hard disk leave only two drive bays available for expansion. The disk controller supports up to two floppy disk

layers deep—between 0 and 16—your posted-write buffer will be. The Z-386/33 can operate at three speeds that you specify with the SETUP program: Slow (AT compatible), Fast, or Smart. Zenith bundles Microsoft Windows/386 and its own incarnation of DOS, MS-DOS 3.3 Plus, with the Z-386/33.

PC FACT FILE

Zenith Z-386/33

Zenith Data Systems
1000 Milwaukee Ave.
Glenview, IL 60025
(800) 842-9000, ext. 1
List Price: Model 1, \$7,999;
Model 150, \$11,490; Model
320, \$13,499. MS-OS/2,
\$339.

In Short: A solid 33-MHz desktop system whose price and performance rival that of good 25-MHz machines.

CIRCLE 450 ON READER SERVICE CARD

MS-OS/2 1.1 will also be available for \$339. The system comes with a 1-year warranty.

If you're looking for the fastest machine money can buy, wait to see what the competition has to offer: the performance of our evaluation unit was disappointing for a 33-MHz machine. On the other hand, if you are considering a high-end 25-MHz box, the Zenith Z-386/33's price and performance may make it a smarter buy. 

Benchmark Tests: Zenith Z-386/33 vs. 8-MHz IBM PC AT and 25-MHz IBM PS/2 Model 70-A21

While the Zenith Z-386/33's 33-MHz processor gives it the edge on the Instruction Mix test, it fared poorly on the Conventional Memory test, with times slower than those of most 25-MHz machines. The standard configuration uses a relatively small memory cache (16K) and a NEC cache controller.

Performance Times (Times given in seconds)	80386 Instruction Mix	Conventional Memory	DOS File Access (small record)	DOS File Access (large record)
8-MHz IBM PC AT	N/A	0.77	72.63	19.74
25-MHz IBM PS/2 Model 70-A21	2.28	0.28	72.37	6.77
33-MHz Zenith Z-386 33	2.08	0.36	60.65	9.83

N/A—Not applicable; not an 80386 machine.

The 80386 Instruction Mix benchmark test measures the time it takes to execute a selected series of processor-intensive tasks. This test program uses 80386 instruction code. These instructions are a subset of the total processor instruction set. The 80386 Instruction Mix implements a number of 32-bit operations. In the 80386 processor these become single instructions, whereas in the 8086 and 80286 versions of the benchmark test they remain multiple instructions.

The Conventional Memory benchmark test allocates 256K of conventional memory and treats it as a series of 64-byte records. Then, 18,384 random records are read into and written from this memory. The result shown is the average of the read and write times.

The DOS File Access benchmark test measures the throughput rate of the disk being tested. In this case, throughout times are measured in terms of how long the disk takes to perform common DOS file-management functions. Five tasks—file creation,

sequential file write, sequential file read, random file write, and random file read—were timed and the results summed.

The test is carried out for two different types of files—small-record files and large-record files—that are used by common PC applications. Files created using small records are typically used by database management programs, and large records are typically used for word processing and spreadsheet files. Loading a DOS program is also simulated by the large-record test.

QuickC 2.0 Shows Off New Interface, Adds Memory Models, In-line Assembler

PC HANDS ON

BY RICHARD HALE SHAW

With QuickC 2.0, Microsoft has redefined the notion of an integrated development environment for C programmers. Sporting an improved interface, QuickC now has several features designed to appeal to the novice C programmer, and it

has taken the time to consider how people will use this program—beyond the pull-down menus and other features that are intrinsic in integrated development environments. The interface is even easier to use if you have a mouse. And you can add your own entries to one of the pull-down menus. This allows you to integrate your own programs into QuickC, so you

yourself. The first half of this book is an excellent introduction to C for people who have programmed in other languages. It doesn't explain basic programming concepts, but it does describe how to implement and express them in C. A novice will find that it presents the full range of C topics, with chapters on functions, data types, and operators. It also includes two chapters on pointers, and all are replete with examples and explanations. The second half of *C for Yourself* covers the advanced topics that more-experienced C programmers will use, and the QuickC Toolkit covers more-technical issues such as compiling, linking, and managing function libraries.

The QuickC Advisor is without a doubt the hottest aspect of QuickC 2.0. This hypertext-based cross-referencing system lets you look up information in a structured manner (via an index or table of contents) or an unstructured manner (like "Find all references to the printf function"). Suppose you need to know what header files a particular function requires or what arguments should be passed to it. Place your cursor (or mouse pointer) on the function and select it. The help system will find the reference and display a complete summary of the function with a description and examples. If you find that you can use the example in your program, you can copy it from the help screen and paste it into your code via the editor.

The Advisor also lets you search for any reference to a word or phrase. It can repeatedly scan through the nearly 1,800 pages of disk-based documentation for the information you need. With this capability, you'll be able to leave the manuals on the shelf.

For more-advanced C programmers, Microsoft has improved the QuickC debugger. It's easier to use and includes a history function that will keep track of the steps you take dur-

ing a debugging session. You can step backward through the code or rerun a series of steps. An animation facility lets you watch the debugger as it steps through the code. While I have a love-hate relationship with Microsoft CodeView (I hate its interface, but I love the results it produces), this debugger is much nicer, even if it's not nearly as powerful.

While the program claims to run in the OS/2 compatibility box (or DOS session), it seemed to have intermittent problems when I ran it (in the DOS session under OS/2 Standard Edition 1.1). Still, you can use it to generate code for OS/2's protected mode, although you can't run it in an OS/2 protected-mode session yet.

All in all, I like this compiler. Inevitably everyone will ask, How does it compare with Borland's Turbo C 2.0? That is a difficult question, and QuickC 2.0 doesn't make it any easier to answer because Microsoft has corrected many of its previous deficiencies in this version. The comparison boils down to differences in taste and style. But if you haven't looked at integrated development environments for C before, you should consider QuickC 2.0.

The QuickC debugger resembles Microsoft CodeView: you can view program variables, registers, and source code as you step through your program.

addresses the needs of professional developers too.

Experienced QuickC users have long griped about its lack of support for more than one memory model. They've also stressed the need to embed in-line assembler into their C programs. QuickC 2.0 addresses both concerns. It provides support for five memory models and in-line assembly language. It includes a new set of presentation graphics libraries, and you can use it to create protected-mode programs for OS/2. Microsoft has also improved the built-in editor and debugger. And all users will enjoy the QuickC Advisor, an on-line help system that virtually eliminates the need for documentation.

I love the new QuickC interface. It behaves the way you expect it to behave, and it seems to anticipate your needs. Someone

won't have to exit QuickC or load DOS to use them.

QuickC 2.0 boasts an improved graphics library with powerful presentation graphics functions. It includes routines for generating bar, column, line, and pie graphs and charts. You can also select from a variety of fonts.

Microsoft also has improved the QuickC editor. While the editor interface has not changed much, it is much closer to the editor supplied with Microsoft C 5.1 under the hood. You can configure it and make it behave like other popular program editors such as *Brief* and *Epsilon Text Editor*.

Microsoft has completely rewritten the QuickC documentation with Version 2.0. Instead of a reference and a user manual, QuickC comes with a small installation guide, the QuickC Toolkit, and a book called *C for*

New Installation Kits-\$79.95.

Glyphix Installation Kits for Microsoft Word 5.0 and WordPerfect 5.0 make short work of installing your new Glyphix fonts. It only takes about two minutes to load hundreds of fonts. Then you're ready to use bold, italic, bold italic, outlined and shaded type in every point size from 3 to 120.

Glyphix fonts literally become part of your word processor and operate side by side with fonts you already own. You just pick the fonts you want and print.

New Business Series-\$99.95.

Each Business Series font set includes four foundry quality typefaces with the ASCII, Roman-8 and Glyphix Character Set for special symbols and foreign characters.

To match the variety and quality of a single Glyphix font set you would have to spend more than \$800 with Bitstream, HP or Compugraphic. We invite you to compare our fonts to theirs. You'll find ours are better and easier to use. That's why Glyphix is clearly the best font value in the industry.

A Special Introductory Offer!

Order the Glyphix Installation Kit for Microsoft Word 5.0 or WordPerfect 5.0 (\$79.95) and any font set (\$99.95) and get a second Business Series font set absolutely free!

That's a \$99.95 value, plus we'll include valuable coupons for new Glyphix Foundry Series fonts with your order.

Join the thousands of loyal Glyphix users who have already discovered quality, easy-to-use type at affordable prices. Order today!

Volkswriter Adds Grammar Checking

PC HANDS ON

BY JONATHAN MATZKIN

You can teach old software new tricks. *Volkswriter*, from Lifetree Software, has been around for almost as long as the PC. It offers a good balance of basic performance and ease-of-use. But Version 4 adds something calculated to make users sit up and take notice: an integrated grammar checker. No other major word processor offers grammar checking as a built-in feature.

Perfect Grammar, as it is called, is the most obvious enhancement in *Volkswriter*, Version 4, but it's far from the only change. The other upgrades are in keeping with *Volkswriter*'s blend of strong functionality and a simple interface.

Lifetree has always made ease-of-use a selling point for *Volkswriter*, and the new

designated document directory. You simply point-and-shoot to load a document or type the name of a different directory. The window displays the contents of the new directory you have selected. Simply typing a filespec (including path) will retrieve a file from anywhere on your disk. Files are sorted by creation date in reverse chronological order, so your most recently created files appear in the upper left of the document selection screen.

Beyond file selection, *Volkswriter 4* offers some other important enhancements. *Volkswriter 4* maintains full compatibility with Lifetree's previous *Volkswriter 3* and *Total Word* software while addressing some of the shortcomings of earlier versions. We complained about the lack of an "undelete" capability in our last review of *Volkswriter 3* ("Fast, Flexible, and Forward-

Perfect Grammar: Almost An Editor

The big news about *Volkswriter 4* is that Lifetree has included a full-feature grammar and style checker in the word processor. *Perfect Grammar* can be called by simply tapping the F2 key from anywhere in a document. It suggests changes intended to make your writing reflect rules of standard business English.

Because it is so tightly integrated with the word processor, *Perfect Grammar* has one obvious advantage over separate grammar-checking packages. You don't have to exit the word processor and run other software in order to check your document.

Perfect Grammar has an impressive lineage; it is descended from *CorrectText*, an ambitious grammar checker developed by Houghton Mifflin to run on mini and mainframe systems.

In actual practice, *Perfect Grammar* displays many of the shortcomings of standalone packages such as *Grammatik III* and *RightWriter*. The sentence "We need to have a meeting, the car is in the garage" is identified as a run-on sentence. *Perfect Grammar* displays information about run-ons and how to correct them. But eliminating the comma between the two clauses causes the software to skip over it without comment. Still, that's better than either *Grammatik III* or *RightWriter* did with the same sentence. Neither program objected to the run-on whether or not it had a comma.

Perfect Grammar seems to do about as well as the other PC-based packages in most other areas. It doesn't seem likely that a sophisticated package designed to run on larger systems can easily be brought down to the PC with all its power intact, and *Perfect Grammar* is subject to that limitation.

Obviously, some additional compromises had to be made in the size of the software in order to allow it to be simultaneously resident with the word processor. As it is, the combination of the two requires a full 640K RAM to run. Lifetree wisely gives you the option of loading the word processor alone.

While PC-based grammar checkers won't "edit" your documents in the same way that a human being would, they do catch many mistakes. *Perfect Grammar* is an extremely convenient way of passing your work through this limited filter without having to leave your work environment.—Jonathan Matzkin

Run-on sentences contain clauses that can stand alone, separated by a comma. Use a conjunction (like "when," "because," or "and") or a semicolon to clarify the relationship between the clauses.

This appears to be a run-on sentence.

Choose: E-Edit I-Ignore S-Skip B-Build H-Help C-Cancel

place. The Mainly Based of the Association for Good Grammar in Computer Publications has reached its decision for a winner of this year's People in Computer Publications Contest. Among the few who were chosen as finalists for the award were 3 women. The effect of this choice will be felt industry-wide, women have come of age in computer publications. The women computerists each won several different programming languages and were also scholars of English management. In his keynote speech Professor J.B. Machine alluded to the famous Women in Computing Speech delivered at the University of Minnesota in the Fall of '04 when he said that these contestants each reflected her personality in her professional career. The winner,

Layout: 1 Spacing: 1 Justify: M Reformat: Y Char. Size: 10 C: Correct ABC Perfection Summary... 16 CIS FI

Volkswriter 4's integral grammar checker will catch many common writing faults, such as this run-on, but it won't replace human editors.

"point-and-pick" file-selection screen is in keeping with that philosophy. When you boot up *Volkswriter 4*, the package presents a screen divided into two windows. The top of the screen is a simple menu that lists many of the basic commands for getting or saving documents. You can also access style sheets from this menu.

The bottom half of the screen lists the files in your pre-

looking." *PC Magazine*, February 29, 1988), and Version 4 adds that feature.

Printer support has also been beefed up to include drivers for PostScript printers. An envelope-printing menu lets you specify top and left margins as well as line spacing. Landscape envelope printing on laser printers is also supported. And you can specify a range of pages and a number of copies to print.

A word-count feature is another welcome addition, and Version 4 also offers a time- and date-stamp feature. Simply tap Alt-D and a window pops up with the current time and date in every format you could possibly imagine. A single keystroke inserts the time and/or date at the current cursor position.

Volkswriter doesn't offer the quasi-desktop publishing features that many other word processors have recently sprouted. Version 4 is aimed squarely at the same corporate and personal users who have made earlier versions a familiar sight on many desktops. The new enhancements improve the tool while keeping it simple to learn and use.

PIPELINE

TOP TEN SELLERS — A 5-Week History

Lotus 1-2-3 bounced back into the top spot when word leaked out that Release 3 will not be the only way to upgrade Lotus's spreadsheet. With Release 3 in the hands of early testers, it's clear that Release 3 will require a fast and fully loaded system; sales of the current

version started to sag as that sank in.

Lotus has now decided on a two-tiered approach. Release 2.2 will have a modest choice of new features and will be suitable for 8088-based PCs. Release 3 will have a wealth of new features but will need the speed of a 286 or 386 to perform well—and it may well require an OS/2 upgrade for peak performance.

New features are nice, but consider what's happened to Ashton-Tate: *dBASE III Plus* is still in the Top Ten and *dBASE IV* is trailing at number 12.

SURVEY

The continued success of Fifth Generation Systems' *Fastback Plus* and other backup programs (see Top Ten Sellers) proves that many people understand the importance of regular backups.

So we asked callers to PC MagNet, How often is enough? The results ought to give pause to those of us who haven't been taking the time to protect our files.

More than 1,300 callers answered the survey.

How often do you back up?

THE 486: MORE OF THE SAME. FASTER.

After months of speculation, Intel has finally unveiled the specs on its next-generation PC microprocessor, the 80486. The chip is months away from large-scale production, and computers based on the 486 won't go on sale until the end of this year—at the earliest.

Right now, it looks as though those who speculated that the chip portends thunderous changes throughout personal computing will be proven wrong. Those who had the more modest expectation of finding a smooth path to higher performance and easier multitasking will not be disappointed.

The 486 is completely code compatible with the 386—there are no new modes and few additional instructions. The 286 protected mode and virtual 86 mode will work flawlessly. DOS and OS/2 applications will run unchanged.

Still, there's plenty of flashy technology to be found among the 1,180,285 transistors in the 32-bit processor.

Intel rolled all of the math coprocessing features of the 80387 inside the CPU—that doesn't just cut down on part costs, it dramatically improves floating-point calculations, since the extra hand-shaking and communicating code that's

been needed for use of the 387 (and the earlier 287 and 8087) is avoided.

Another big performance gain will come from an integrated 8K data cache inside the 486. Intel's engineers have employed a four-way set associative logic that, they claim, will have a better than

tive cache means that four distinct buffers are maintained. Algorithms choose the best distribution of saved addresses for the cache. In contrast, the memory caches used in today's 386 PCs use a linear, direct-mapped logic.

Bus Snooping

The chip was designed to work smoothly with several proces-

three times what a 386 costs (\$950 versus \$300), so the premium for a 486 PC will not be as severe as some expected.

The first chips will have 25-MHz clock speeds and, several months later, a 33-MHz version will ship. Although those speeds match the fastest 386s now, Intel believes that the 1-micron, high-speed CMOS design of the 486 will carry it far

Inside Intel's 80486

90 percent hit rate when retrieving the contents of RAM. In addition to the performance boost, the cache will be a cost saver: it saves on the amount of memory system designers are tempted to devote to an on-board cache.

The four-way set associa-

sors on the same bus, and so the cache includes a bus snooping technique that monitors changes to memory locations. As a result, two or three 486s could be reading from and writing to the same bank of RAM—the ideal setup for running OS/2 applications that are sharing files.

In fact, Microsoft's OS/2 engineers had plenty of advice for Intel's design team. As a result, 386 instructions that affect semaphores were optimized in the 486. Down the road, you're likely to see OS/2 shipping with two sets of dynamic-link libraries, one for each processor. While the 486 will run such 286/386-specific code, the improved semaphore handling of the 486 will give a performance boost when running DLLs that take advantage of the changes.

The processor is expected to cost computer makers about

ahead—up to 50 and 60 MHz in the early '90s.

No Quick Switch

Clearly, a 486 transplant could be used to pump a little more speed out of current 386 PC designs; although the 168-pin 486 is not pin compatible with the 132-pin 386, adapter cards could be created. But since the 486 design sets new demands on bus specifications, little would be gained. The new processor can handle fast burst-mode transfers that current bus designs won't provide.

The 486's true potential is a server in which three or more processors each run separate multitasking applications, sharing memory and storage.

But there's nothing to stop you from buying this latest toy simply to pump the last bit of juice out of your biggest, toughest spreadsheet.

Teflon[®] Protection
on Recording Surface
Lifetime Warranty

For People Who Put A Premium On Performance. And Protection.

The more invaluable your data is to you, the more you'll value Verbatim.[®] Because when it comes to high performance and data protection, Verbatim has the winning combination no other floppies can copy.

Consider this: Verbatim DataLife[®] floppies are engineered to perform an average of 50 million revolutions. That's 15 times the industry standard.

Then consider that Verbatim DataLifePlus[™] and DataLife HD 5¼" disks were the first floppies to be factory formatted.

Verbatim also gives you plenty to consider when it comes to data protection. After all, nearly 50% of all computer users have lost time and money due to accidental data loss. That's why Verbatim offers advantages like DataHold[™] and DataHold II

anti-static liners. So static charges are dispersed before they ever have a chance to build up.

For the world's ultimate data protection, DataLifePlus floppies have an exclusive DuPont Teflon[®] coating. So fingerprints and spills can be easily wiped from the recording surface.

And of course, all Verbatim floppy disks are tested to be 100% error free and are backed by a lifetime warranty.

Verbatim data cassettes and cartridges, 8", 5¼" and 3½" diskettes. For people who put a premium on performance and protection.

For more information on the full line of high-quality Verbatim products call 1-800-538-8589.

CIRCLE 260 ON READER SERVICE CARD

Actor: Object-oriented Development Tool Lessens MS Windows Programming Load

PC HANDS ON

BY ROBERT L. HUMMEL

Simply put, *Actor* is a programming environment that helps you design *Microsoft Windows* applications. A programmer's tool rather than an application generator, it won't do you any thinking for you, but it can make programming for *Windows* easier.

Instead of separating the active programming instructions from the passive data, *Actor* integrates the two into a unit called an object. Objects are easily explained as smart data. Consider a dancer, a singer, and a piano player. Without knowing anything about which is which, you can issue the command "Perform!" The command itself is ambiguous, but because the performers (the data) are smart, they each know what to do.

Application development in *Actor* still requires program design, coding, and generation. First, you specify the objects needed by your program. Every object is simply a specific instance of a general, descriptive class. A class is somewhat analogous to a data type.

A large number of classes, many relating specifically to *Windows*, are available in the *Actor* environment. These can be used without any programming effort. If you can't find one that's suitable, you can modify an existing one by a process called inheritance. This ability makes it easy and desirable to reuse code.

Once you define the objects, you then write the routines, or methods, that the objects will execute as they receive messages. For example, if you defined an object called Table-Lamp and decide it should act on the messages TurnOn and TurnOff, you would write two methods to implement those actions. Despite the strangeness of the means, you still wind up

with the same end.

Actor is an interpreter. This makes programming highly interactive and leads to rapid application development. But, when complete, your application will run only under *Actor*. If your goal is to produce a

The Debug and Browser tools have been improved by adding command shortcuts and scrolling improvements. Some of the biggest complaints about the environment have also been addressed. Fatal errors caused by using an incorrect number of

Actor's ability to display several programs while maintaining control of the environment makes complex programming tasks easier.

standalone version that will run under *Windows*, you must undertake a conversion process.

Creating a standalone application means taking the generic *Actor* runtime kernel, adding specific classes and methods you need, and removing those you don't. After this editing, two files are produced: an .EXE file that launches the application and an .IMA file that is really a runtime subset of the *Actor* environment. When executed, your finished program looks and runs like any other *Windows* application.

Actor 1.2 contains several improvements and changes from the previous version. It now works only with *Windows/286* and *Windows/386*. Version 2.1 and later, but it gives programmers full access to all *Windows* 2.x functions, messages, styles, and resources. Overall performance is improved through the efficient use of expanded memory, if available.

arguments in a *Windows* function call or making a call to an invalid window have been eliminated.

The ease by which programming (such as with a macro or batch language) can be included in your application is a major improvement. And despite the additional functionality and overhead of running under *Microsoft Windows*, *Actor* performance remains quite acceptable.

Interfacing with C and *Windows* routines has been made easier by the addition of a new *Actor* class, CStruct. Three new facilities permit low-level programming, including physical memory access, hardware I/O, and software interrupts.

The first step to using *Actor* effectively is to understand object-oriented programming. If you've never used objects before, it will probably take you twice as long to learn *Actor* as another linear language. But the program's 600-page-plus man-

ual provides an excellent tutorial on object-oriented programming and, overall, I believe you could turn out your first *Windows* application sooner than if you learned to program for *Windows* in C.

Writing programs in *Actor* has a different feel than with traditional languages. Your aim is to minimize program complexity and thus produce easily maintained code. But *Actor* can camouflage errors that occur at the hardware level or in the operating system routines. When deciding whether or not to use *Actor*, it's important to know what's more important to you: understanding what *Windows* is doing at the hardware level or getting an application written quickly.

Who can benefit most from *Actor*? As more large firms develop in-house applications designed to run under the *Windows* environment, they'll find *Actor* is a quick way to start turning out applications. I would recommend *Actor* to anyone with an interest in programming for *Windows*. ☐

IQ Engineering's Super Cartridge™ 1

Awarded "***The Best of 1988***"
in printer fonts by PC Magazine.

January 17, 1989

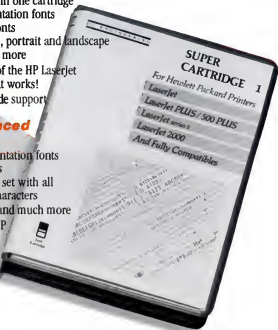

Now there's **Super Cartridge 1 Enhanced** to bring your HP LaserJet Printer to its fullest capability with the highest quality fonts.

Super Cartridge 1

- 97 % of all standard cartridge fonts in one cartridge
Including:
 - 14 and 16 point Presentation fonts
 - Linedraw and Math fonts
 - All proportional fonts, portrait and landscape
 - Legal fonts and much more
- Totally compatible with all models of the HP LaserJet Printer family — This is the one that works!
- Outstanding documentation and wide support

Super Cartridge 1 Enhanced

- Adds over 100 soft fonts
Including:
 - 24 and 30 point Presentation fonts
 - All Tax Cartridge fonts
 - Full Roman-8 symbol set with all European language characters
 - All bar codes, OCR-B and much more
- Compatible with all models of the HP LaserJet Printer family which accept downloadable soft fonts
- Outstanding documentation and wide support

introducing SoftSafe™ Powerful New Protection For Your Valuable PC Data

*Effortless software security system locks out unauthorized
PC file accessing, viewing and viruses!*

Now, SoftSafe™ — the easiest-to-use PC data security program available — protects and preserves the integrity of your sensitive computer files in four ways:

Hard Disk Access Control

With SoftSafe, all data on your hard disk can only be accessed by using a valid password. Each computer has one "Owner", and only the Owner can add or remove up to 7 users. All hard disk information is fully protected from access, viewing, copying or modification by unauthorized users even if your PC is booted from a diskette.

Automatic File Encryption

SoftSafe provides effortless file encryption. Simply save sensitive data to a subdirectory name that includes the word "SAFE" (i.e. C:/123/SAFE/BOB). It can only be accessed by the file

creator or the computer Owner. It's easy, automatic, and does not interfere with your programs.

Virus Detection

SoftSafe also includes a powerful virus detection/protection

option. It checks your critical system files for any tampering each time you boot (start) your computer. If infection is detected, SoftSafe sounds an alarm and visually indicates which files have been attacked. You can then choose to KILL or IGNORE the virus.

Screen Privacy

SoftSafe even provides a solution to the problem of interruptions when working with sensitive data. With LOCKOUT, you simply hit the hot-key sequence and your screen is covered with the SoftSafe password display. Then only your password will unlock the computer.

Installs in seconds! Easy to use!

SoftSafe is 100% software — no complicated hardware — one command installs it in seconds. It's easy to use — no administration needed — and no program or system modifications required. SoftSafe works on all IBM/PC/XT/AT, PS/2 and 100% compatibles running DOS 3.0 and up.

VP Toolbox: The Easy Way to Manage Ventura Publisher Files and Style Sheets

PC HANDS ON

BY EDWARD MENDELSON

"Ventura Secrets Exposed" should be the headline on every copy of *VP Toolbox*, Version 3.0. This \$99 file manager for *Ventura Publisher* lets you easily catalog, display, or rearrange the files in *Ventura* chapters, and view, compare, or alter the contents of *Ventura* style sheets. In *Ventura* you perform some—not all—of these functions, but only after hours of tedious mouse-maneuvers in a dozen disconnected menus.

VP Toolbox runs from the DOS command line. You use arrow keys or a mouse to access screens that list the files included in your publications and the contents of the associated style sheets. The program lets you maintain a catalog of information about chapters and style sheets in any directory on your disk, so you get quick access to information that's almost impossible to find within *Ventura*. You can view or print lists of text, line art, and image files included in any chapter. And you can automatically display word counts for all text files, or peek at the opening screen of each.

VP Toolbox is even more impressive when managing style sheets. A keystroke brings up a summary listing of each tag in a style sheet. Another keystroke zooms in on the full contents of any tag. You can print summary or detailed reports of style sheets, or generate a file to print from *Ventura* that contains samples of the font, spacing, and alignment of each tag. You can also determine which tags are actually used in any chapter and compare two style sheets for similarities and differences.

The \$149 Advanced Edition and Network Edition of *VP Toolbox* let you modify all the tags in a style sheet that use the same font, point size, line spacing, or other attributes. Instead of searching through a dozen tags to make sure you've

changed every instance of 10-point Helvetica to 11-point Futura, you can make the change with a few keystrokes. With the Advanced and Network Editions you can also generate a dBASE or comma-delimited file from the program's

catalog of style sheets and chapters.

VP Toolbox isn't perfect. It tends to drop you abruptly into the opening menu when you want to get further work done in a deeper menu. And it needs a function that lets you search for

a text string in all the files in a chapter or publication. But no other program makes it as easy to harness the multitude of files that *Ventura* can print.

List Price: *VP Toolbox*, Version 3.0, \$99; Advanced and Network Editions, \$149 each. **Requires:** 256K RAM, DOS 2.1 or later. Not copy protected. SNA Inc., P.O. Box 3662, Princeton, NJ 08543; (609) 799-9605.

CIRCLE 446 ON READER SERVICE CARD

SLEd Adds Graphics to Text-based Applications

PC HANDS ON

BY EDWARD MENDELSON

You have a choice of two ways to add a logo or signature in your laser-printed documents. If you're lucky enough to use a word processor that handles graphics, you can import the digitized image and then go out and get a cup of coffee while the image prints slowly in graphics

and other text-based applications. Although *SLEd* lets you scan, create, import, resize, and edit .PCX and .IMG files like any other graphics editor, you're better off with almost anything from *PC Paintbrush* to *Micrografx Designer* if all you need to do is edit and print graphics.

You need *SLEd* when you want to use graphics in applications that don't know anything

application and then type the letters of the alphabet in a block. *SLEd* specifies the length and width of the block when it converts the graphic. You adjust the location of the image just as you would text.

The simpler way, which works only with HP LaserJets and compatibles, is to use *SLEd* in conjunction with its 10K TSR. You simply type the name of the converted soft font between two caret characters in your document.

The TSR, which monitors output to the printer, detects the filename and substitutes the characters in the converted font instead.

SLEd also makes it easy to integrate text into graphics. Using any soft font stored on your disk, you can superimpose text over existing images. You can't modify individual letters as easily as you can with high-end graphics programs like *Corel Draw!*, but you can use the results in any application.

The package comes with two soft fonts and a disk of decorative border patterns, along with a few scraps of clip art. You can send images to VS Software to be digitized for \$25 each (\$50 with touch-up), and every registered user gets one digitized image free. The order form has room for a signature as imposing as John Hancock's.

List Price: *SLEd Image Processor*, \$295. **Requires:** 512K RAM; hard disk; graphics display; HP, Canon, Ricoh, or Cordata laser printer. Mouse or tablet recommended. Not copy protected. VS Software, 209 W. 2nd St., P.O. Box 6158, Little Rock, AR 72216; (501) 376-2084.

CIRCLE 445 ON READER SERVICE CARD

SLEd lets you enter text into a graphic screen and then copy it as white-on-black text into any part of the image.

mode. Or you can use *SLEd* to convert the graphics image into a soft font, download it, and print it as quickly as if it were text.

VS Software's \$295 *SLEd Image Processor* is a graphics editor designed solely for laser printers and mostly to prepare graphics for word processing

about graphics, or that include graphics only as an awkward add-on. *SLEd* takes a graphics image and slices it into pieces the size of the letters in a standard Courier font. You can then print the image in one of two ways.

The complicated way is to switch to this new font in your

Quicken is easy because it looks like your paper checkbook. There's nothing new to learn.

Quicken automatically updates your check register, recalculates balances, and prints your checks.

Quicken prints checks even on laser printers. Pre-approved by all financial institutions, Quicken checks are easily ordered through the form in the package.

Quicken gives you these reports in seconds:

- Budget vs. Actual
- Taxable Income/ Deductions
- Income and Expense (P&L)
- Rental Property/ Job Costs
- Accounts Payable
- Cash Flow/ Cash Needs
- Payroll Taxes

Quicken eliminates work. It instantly writes recurring checks without typing.

End Financial Hassles. Quicken®, \$49.95

Quicken is the absolute fastest, easiest way to do your personal or small business finances. It saves you hours of time while perfectly organizing your finances. With Quicken, you'll always know exactly how much money you have and where it's going.

Forget Financial Hassle

Quicken is so automatic, it does your financial work for you. It actually learns your regular bills, just confirm the payment amounts on your auto loan, utilities, and other bills. Quicken does 14 bookkeeping steps and hands you the printed checks already addressed for mailing. All you do is sign them and seal the envelopes. Plus, install Quicken on your hard disk and the pop-up Billminder™ appears on your screen to remind you when you have bills to pay—even if you forget!

Finish Financial Work in Seconds
Instead of dreading tax time, use Quicken to print itemized lists supporting each tax deduction. Or, let Quicken deliver other detailed reports such as income and expenses by category, P&Ls, and budget vs. actual comparisons. Quicken provides complete reports on screen or on paper almost instantaneously. Quicken will finish in seconds the same work that used to take you hours.

No Accounting Mumbo Jumbo
Quicken is as easy as the pen and paper you use now. You'll see the familiar checkbook and check register right on your screen. The only thing that changes is how fast you finish your financial chores. This is bookkeeping that's totally hassle-free.

**The World's #1 Selling
Financial Software**
Here's why Quicken is the world's most popular:

Quicken is about as good as software gets: powerful, affordable, and easy to use.
Bill Howard, Executive Editor
PC Magazine, December 27, 1988

For Personal and Business Use
No other financial software provides more flexibility to handle the wide range of personal or business needs. Quicken is for service and manufacturing businesses, doctors, consultants, designers, retailers, as well as for households. Quicken is ideal for anyone who wants relief from bookkeeping hassles.

Specifications:
Software Compatibility: Exports data in dBase format. Also exports in Lotus® format with optional Transfer Utility.
Hardware Compatibility: Regular Versions All IBM® PC, AT, PS/2® and compatibles with 256K RAM and DOS 2.0 or higher. All printers. All monitors.
Hardware Compatibility—DeskMate Version: Tandy 1000 SL with 384K RAM or IBM PC, AT, PS/2, and compatible computers with 512K RAM and DOS 2.0 or higher. All printers. All monitors (monitors require a Hercules or compatible graphics card). Also available for Macintosh and Apple II.
Capacity: Unlimited number of bank accounts. Unlimited number of transactions. Maximum amounts to \$9,999,999.99.
Other: Unlimited FREE technical support. Not copy-protected. Checks are preapproved by all financial institutions in the U.S. and Canada. Sample checks and order form are enclosed in Quicken package.

Try Quicken FREE for 30 Days
Order Quicken from the coupon below, or through our toll-free 800 number. If you're not completely satisfied with Quicken for any reason, simply return it for a full, no-questions-asked refund.

New! Now Available in DeskMate™
Quicken's new DeskMate version offers mouse-driven "point and click" ease. This version has exactly the same features as regular Quicken, but in the graphic DeskMate interface.

Quicken **\$49.95**

I want to try Quicken on your no-risk 30-day guarantee. If I'm not completely satisfied, I may return it within 30 days for a full refund. Quicken, \$49.95 plus \$3.00 shipping and handling. California residents add sales tax.

Collage Plus Pops Up over Windows, Ventura Publisher To Capture and Manage .PCX Files

PC HANDS ON

BY EDWARD MENDELSON

Collage Plus disobeys all the rules.

Memory-resident programs aren't supposed to be able to pop up over the graphics screens of *Microsoft Windows* and *Ventura Publisher*, much less capture *Windows* and *Ventura* screens. To the amazement of everyone who sees it, Inner Media's \$89.95 set of desktop publishing utilities does exactly that.

When you need to glance through a dozen .PCX files to find the one you want to import

The *Collage Plus* window, shown in the upper-left portion of the *Ventura Publisher* screen, can pop up over nearly any application to view .PCX files.

into *PageMaker*, *Ventura*, or other applications, *Collage Plus* pops up in the corner of the screen and opens a small window for viewing any .PCX or .PCC file on-disk. If you need to see more detail, you can blow up any portion of the image to fill the window.

That little window opens onto many interesting possibilities. *Capture Plus* also lets you capture screens. You can adjust the color palette of the application's screen and then capture the screen as a .PCX file. And you can choose whether to save the screen in color or, for desktop-publishing, in gray-scale or two-color black-and-white format. Nine different .PCX formats are accessible from the menu. Text screens can be saved as text files and edited in any word processor.

The pop-up utility comes on-disk in three different sizes and capabilities to suit different memory requirements. Any of them can be forced to store most of its code in expanded memory, leaving only 7K in DOS.

The other half of *Collage Plus* is a full-screen nonresident viewing program that lets you examine all or part of any .PCX file and rename or delete it. You don't have to load the TSR program to use this viewer, but you can use the TSR to convert color images into monochrome by displaying them in the full-screen viewer and then capturing them and converting them with the TSR.

You may have to juggle the loading order of any existing TSRs to make *Collage Plus* work smoothly with them, but the result is worth the initial effort. Afterwards, you'll find that using graphics images in desktop publishing suddenly stopped being a headache. **List Price:** *Collage Plus*, \$89.95. **Requires:** 256K RAM, DOS 2.0 or later. Not copy protected. Inner Media, 60 Plain Rd., Hollis, NH 03049; (603) 465-3211.

PC-MIX: DOS Multitasking Made Simple

PC HANDS ON

BY BARRY SIMON

Multitasking under DOS is a precarious undertaking at best: setting up the multitasker is not for the faint of heart, and once you're up and running, things don't always work the way they should.

Proware hopes to change all that with its \$49.95 DOS multitasker, *PC-MIX*. The idea behind *PC-MIX* is a good one: sacrifice some of the sophistication of multitaskers like *DESQview* for ease of setup and use. Alas, *PC-MIX* may sacrifice too much sophistication to be truly useful to most users.

To keep the multitasking down to a manageable level, *PC-MIX* lets you run only three partitions. The menu-driven configuration program requires only that you assign a priority to each partition and specify how much memory each partition can use.

Once up and running, each of the three partitions occupies the full screen. *MIX* avoids the problems other multitaskers have with graphics by not allowing you to run graphics in

the background at all. And if you run a graphics program in the foreground, all background tasks are frozen.

If you have EMS 4.0 swappable memory below 640K, each partition can be as large as the amount of memory you have before *MIX* loads minus about 30K for *MIX* itself—in the neighborhood of 500K. But if you don't have the swappable EMS memory, the sum of your partitions is limited to this same size—less RAM than DOS normally allows you for a single application.

Another caveat: programs that write directly to the screen (most of my applications do) will bleed through to the foreground when running as background tasks unless you follow a special setup treatment. The special treatment involves loading the programs via a special batch file. On monochrome systems, programs loaded this way are suspended when in the background. On color systems, you are limited to one such program in the background rather than two. *MIX* also has problems with applications that use multiple pages of video display memory, such as Turbo Pascal pro-

grams and *Brief*.

Running a communications program in the background was a shaky experience. I did succeed some of the time, but I crashed often while downloading files. Proware conjectured that this could have something to do with my running *PC-MIX* on a 25-MHz 386 system. I had no problems when compiling a program or recalculating a spreadsheet in the background.

The idea of a simple but limited multitasker is an interesting one, and this current version is an attractive first step. But except a few problems if you install this program. And if you don't have expanded memory, you should think twice before plunking down your money: limited to 640K, you'll be hard-pressed to run two full-size applications at once, much less three.

List Price: *PC-MIX*, Version 1.1, \$49.95. **Requires:** 256K RAM (640K recommended), EMS or EMS 4.0 memory recommended, DOS 2.0 or later. Not copy protected. Proware, P.O. Box 551314, Dallas, TX 75355; (800) 842-3787.

CIRCLE 444 ON READER SERVICE CARD

Don't drag your PC along! Take the shortcut between programs and files with Software Carousel.*

Why get dragged down by that old PC technology?

Despite the sophistication of today's PCs, there's one thing they still don't do. And that's work the way people work. Jumping from one task to another—from budgets to memos to phone calls and back.

So every time you need to change programs—or just look at another file—it's the same old, tiresome routine—saving, exiting, loading, retrieving. Not very convenient. Not very human. Now you could wait for the "next generation" of computers. Or use Software Carousel, and get the speed and convenience you need today, with the software, and computer, you already own. **Here's how to make Software Carousel work for you.**

Software Carousel is the amazingly easy way to switch almost instantly from WordPerfect to 1-2-3 to dBASE to DOS to whatever else you want. Or go from one file to another in the same program. All without saving or retrieving—or wasting a precious moment of your time. Or your computer's memory.

It works by creating a number of independent software slots to load your programs into. You get up to ten of these software slots, so you can load up to ten programs.

Need to crunch numbers? Hit a key and there's your spreadsheet. Need your word processor? Don't bother saving your spreadsheet file. Just whip over to your document and do your work. Snap back to your spreadsheet and it's just like you left it. It's like all your programs are "pop-ups," just a hotkey away.

Or load the same program into a few different slots, each with a different file. Now go from one to another in an instant.

Here's the best part of all.

You may have heard about some other "environment" programs that claim to do something similar to Software Carousel. But there are several important differences.

First, they make you split your memory up among the programs you want to use. Software Carousel lets you use all available memory in each and every program. It even supports expanded and extended memory.

Other environment programs work with only some software. Software Carousel

works with everything. Period. It even resolves conflicts among memory resident programs.

Other software creates a working environment that's complex, unfamiliar, with cramped little windows and strange commands. Software Carousel takes minutes to set-up just the way you want it. All your software looks and acts exactly as it always did. **It's so downright useful, even IBM® recommends it.**

Even as you read this page, there are tens of thousands of Software Carousel users zipping through their work without laborious and repetitive commands. And without the usual 640K limit imposed by DOS. In fact, even IBM recommends Software Carousel for use with their most popular mainframe-to-PC communications package.

We think you'll agree, that with this kind of speed, convenience, and next-generation performance, \$79.95 is a small price to pay.

Look for Software Carousel at software dealers everywhere. Or order direct from SoftLogic Solutions by calling us toll-free. If, after thirty days, you're not satisfied that Software Carousel is the right way to get that old PC technology off your back, we'll gladly arrange for a refund of your purchase price.

Here's what people are saying about Software Carousel:

"Can't believe how well it works. Who needs 80386?"
—Ralph Evans, Attorney, Fullerton, CA

"Unlike other attempts (e.g. MS Windows, DesqView) yours works, is not fragile and does not intrude its 'personality' on everything that we do."
—Colin Ralph, Ralph & Ponce, Inc., Seattle, WA

"Fantastic program. Great book. Saves me an hour a day! Thanks."
—Larry Parnal, Rolling Hills Covenant Church, Rolling Hills Estates, CA

"Solved all my problems with resident software."
—Walter Affowitz, West Islip, NY

Test fly the CPU performance/price winners.

Precision High Performance

All CPU computers offer super fast features at prices that have the competition grounded.

Our 386 models include your choice of MFM or RLL 1:1 hard disk drive controller with caching, 16MB 32 BIT memory on board and shadow bios/video RAM features, so they fly much faster than the rest.

And they support virtually every popular operating system to give you top-gun power including, MS-DOS, PC-DOS, OS/2, PC-MOS, Xenix, PICK and many others.

Custom Ordered

Every order is filled according to your specifications. Add the options you need. VGA Deluxe, VGA, EGA color, or TTL monochrome monitors. Specify the disk drives of your choice—up to 2 gigabytes, and your system is ready to power up.

Authorized Novell LAN Systems

Since we're also a Novell Gold-Authorized Dealer we can offer you an entire turnkey network package that will take off straight out of the box.

And our staff will provide design planning and technical expertise to keep it flying.

Choose from Arcnet, Token Ring

or Ethernet. We can even gateway our PCs to your IBM mainframe.

Call now for a free estimate.

Made in the U.S.A.

All our computers are fully assembled, burned-in and tested before they leave our California factory.

And since we manufacture the main system board domestically, we can offer a warranty that's longer than any other company—a full 18 months on the system board along with an optional one year on-site service contract covering the entire system.

Unlimited Free Support

If you need assistance, our trained technical staff is on duty to assist you.

And our sales technicians can help you plan your system and prepare a quick quotation by mail, fax or phone.

Factory-Direct To You

We can offer better features at the best performance/price package because we sell factory-direct, so there's no middleman. You get the quality and features you want, and savings, too, because there's no reseller markup.

30 Day Money Back Guarantee

Our systems are installed and running at thousands of satisfied

customer sites

across America. We guarantee you'll be satisfied, too. If for any reason within 30 days you're not, simply return the system for a full refund of your purchase price. Call toll-free and order now. We'll take you up above the rest.

by Lori Grunin

Serial I/O Controller
For the Micro Channel

If much of the work you do with your Micro Channel machine involves serial communications, you may want to offload some of your CPU's burden onto the 16-MHz 80C186 processor located on **Metacomp's** PScomm2/4 serial I/O controller board. The 16-bit bus-mastering board comes in two versions, the two-channel PScomm2 (\$1,395) and the four-channel PScomm4 (\$1,495).

The PScomm2/4's two-transmitter, two-receiver 85C30 Serial Communications Controllers (SCC) enable you to program each channel separately for protocols such as SNA, X.25, SDLC, and HDLC. The SCCs can be configured to operate in polled, interrupt, and DMA modes and set up for common interfaces, such as RS-232C. The board supports full-duplex DMA on all channels, and two of the channels can operate at full duplex at a rate of up to 2.48 megabits per second.

Four EPROM sockets, two of which are configurable with 256K of EEPROM or static RAM, will hold a maximum of 512K of nonvolatile memory. The PScomm2/4 comes with 512K of triported, byte-parity protected DRAM that serves the on-board 16-bit processor, local DMA communications controllers, and the Micro Channel. Eight LED indicators help you to monitor diagnostic and software status.

Metacomp offers optional communications software and firmware that include X.25, SNA, debug, and development tool kits and power-up diagnostics. You can currently obtain drivers for DOS 4.0.

List Price: PScomm2, \$1,395; PScomm4, \$1,495. **Requires:** Micro Channel machine. Metacomp Inc., 15175 Innovation Dr., Suite A, San Diego, CA 92128; (619) 673-0800.

Four EPROM sockets let you configure the PScomm4 with up to 512K of nonvolatile memory.

LAN Operates Over
Ordinary Phone Lines

The IEEE hasn't yet approved the pending 10BASE-T standard for networking over unshielded twisted-pair wiring, but **NetWorth** is betting that the current proposal will pass: it plans to be first out of the chute with its EtherneXi UTP LAN.

EtherneXi, a star-topology Ethernet LAN that complies with the existing IEEE 802.3 standard, consists of 8-bit (\$495) and 16-bit (\$595) network cards and a 12-port UTP concentrator (\$1,995) that can be configured in various ways. The board comes in an MCA version, too.

The system supports 1,024 nodes per network, with up to 10,000 workstations. Stations can be up to 328 feet from a concentrator, and fiber-optic cabling will allow concentrators to stand over 328 feet apart. Data transfers occur at a rate of 10 megabits per second.

EtherneXi incorporates CSMA/CE—Carrier Sense Multi-Access with Collision Elimination—the firm's proprietary scheduling scheme for avoiding signal collisions.

List Price: EtherneXi, 8-bit network card, \$495; 16-bit network card, \$595; 10-slot chassis with power supply, \$1,220; 12-port UTP concentrator, \$1,995. NetWorth Inc., 8101 Ridgepoint Dr., #107, Irving, TX 75063; (800) 544-5255, (214) 869-1331 (in Tex.).

You can plug seven 12-port UTP concentrators or 4-port fiber-optic concentrators into EtherneXi's 10-slot chassis.

HOT PROSPECT

\$295 CAT Reader Unites
OCR and Hand Scanners

Computer Aided Technology's \$295 CAT Reader promises to give you 200-dot-per-inch hand scanner the OCR capabilities previously available only in desktop scanners.

When using a hand scanner, text tends to skew—characters compress and lines slant—making character recognition difficult. *CAT Reader* can handle a skew of up to plus or minus 10 degrees. The program merges the pieces scanned by a hand scanner into one page, can exclude graphics, and can perform OCR solely on selected sections of pages.

Using a feature-extraction algorithm, *CAT Reader* reads monospaced, proportionally spaced, and typeset characters, including those using kerning and ligatures. Recognition occurs at an average of 75 characters per second on an IBM PC AT or compatible with an accuracy of approximately 99.5 per-

cent, according to Computer Aided Technology.

The software comes with ten pretrained typescripts, but you can train it (interactively or non-interactively) to recognize other characters between 6 and 20 points. Editing *CAT Reader's* font dictionaries permits correction of mistrained characters.

CAT Reader supports The Complete Hand Scanners, The Complete Half Page Scanner, DFI Handy Scanners, GeniScan GS-2000, Logitech ScanMan, Mitsubishi Hand Scanner, NIS-CAN, and SkySCAN, and outputs files in *WordPerfect*, *WordStar*, and ASCII formats. **List Price:** *CAT Reader*, \$295. **Requires:** Hand Scanner, 640K RAM, graphics adapter, DOS 3.x. Not copy protected. Computer Aided Technology Inc., 7411 Hines Pl., #212, Dallas, TX 75235; (214) 631-6688.

NEW ON THE MARKET

Xerox Graph Ports Scientific, Technical Graphing from Macintosh to Windows

Adding to the growing list of software ported from the Macintosh, Xerox brings the acclaimed technical graphing package *Cricket Graph* to the PC under the name *Xerox Graph*. The \$295 program, which includes the rarely found capability to create polar plots, runs under *Microsoft Windows*.

Xerox Graph produces variations on pie, column, bar, line, area, scatter, double-y line and scatter graphs, as well as horizontal and vertical error bars and text charts. It also performs simple, polynomial, logarithmic, exponential, and interpolated curve fitting.

Tiling windows allows a user to work on multiple graphs simultaneously, and graphs can be resized and repositioned by dragging with the mouse. You can also overlay certain types of graphs and print several graphs on the same page.

The worksheet built into *Xerox Graph* handles a data matrix of up to 40 columns by 2,700 rows (also the maximum data-

set size); it enables you to sort, recode, and transform data as well as perform simple math, calculate frequencies, and smooth data.

Text may be positioned anywhere on the page, and you control font, size, typestyle, text and background colors, orientation, and justification. The package comes with two Bit-stream typestyles.

Xerox Graph imports files in .WK7, .XYLK, .DIF, ASCII, and Macintosh Cricket Graph 1.2 formats and will export graphs as a *Windows* Metafile for use with *Ventura Publisher* and *Xerox Presents*.

List Price: *Xerox Graph* (includes a runtime version of *Microsoft Windows*), \$295. **Requires:** 640K RAM (1MB recommended), graphics adapter (mouse recommended), DOS 3.1 or later. Not copy protected. *Xerox Desktop Software Business Unit*, 9745 Southwest Park Ave., San Diego, CA 92131; (800) 822-8221.

CIRCLE 437 ON READER SERVICE CARD

(\$1,325) and the external RD45e (\$1,625). Two SCSI interface kits, one for the PC bus (\$195) and one for the MCA bus (\$250) make possible the RD45's 16-bit DMA transfers.

Sysgen's \$175 cartridges hold 44.44MB of data, have a write-protect switch, and are rated at 20,000 hours MTBF. **List Price:** MAXI RD45i, \$1,325; MAXI RD45e, \$1,625; MAXI PCD kit (PC bus interface), \$195; MAXI MCD kit (MCA interface), \$250; 45MB cartridge, \$175. CIRCLE 441 ON READER SERVICE CARD

2,400-bps Modem Won't Monopolize Your Serial Port

If you've been sacrificing the I/O ports on your machine

grudgingly, Micro Electronic Technologies' \$295 pass-thru modem will let you put your irritation aside for at least one peripheral.

The company's Hayes-compatible 2400X provides 2,400-bit-per-second communications when active and feeds data to another device when off.

The external modem is 5.5 by 4.2 by 1.5 inches; made possible by the use of surface-mount technology, automatic fallback to 300 or 1,200 bps, and the ability to store phone numbers in nonvolatile memory. One DB-25, one 9-pin, and two RJ-11 jacks comprise connection options.

List Price: MET 2400X, \$295. **Requires:** RS-232 port. Micro Electronic Technologies Inc., 35 South St., Hopkinton, MA 01748; (508) 435-6481.

CIRCLE 442 ON READER SERVICE CARD

LED indicators and a modem/serial switch adorn the front panel of the small-footprint MET 2400X modem.

Sysgen's Removable Disk System Eases Storage Crunch

Expanding your system's storage becomes as easy as slipping in a new 45MB cartridge with

Sysgen's MAXI RD45 removable hard drive subsystems. The SCSI drive unit features 25-millisecond disk access times, 1:1 interleave, and a data transfer rate of up to 500K per second.

The half-height 5¼-inch MAXI RD45 drive comes in two models: the internal RD45i

The read/write heads in Sysgen's MAXI RD45 removable hard disk drive system reside in the drive unit rather than in the disk cartridges.

**12-MHz Compaq Deskpro 286e Offers Small Footprint, VGA on Motherboard**

If you had doubts about the vitality of the AT-compatible market, Compaq's new 12-MHz Deskpro 286e should lay them to rest.

The machine comes in three models, all with 1MB of RAM on the motherboard and a high-density 5¼-inch floppy disk drive. The \$2,699 Model I has no hard disk drive, while the \$3,199 Model 20 and \$3,599 Model 40 have 20MB and 40MB hard disk drives, respectively.

Since Compaq integrates the VGA, serial and parallel ports and the drive controller into the motherboard, you don't lose any of the four 16-bit expansion slots to one of these cards.

List Price: Compaq Deskpro 286e, Model I, \$2,699; Model 20, \$3,199; Model 40, \$3,599. Compaq Computer Corp., 20555 FM 149, P.O. Box 692000, Houston, TX 77269; (713) 370-0670.

\$80 QuickTalk: Janitor for Dialed-in Data

PC HANDS ON

BY BRUCE BROWN

Don't you just love reaching out and downloading data via modem? Don't you just hate cleaning it up for your application? With *QuickTalk*, you won't have to play janitor anymore.

SilverSoft's \$79.95 RAM-resident telecommunications program takes away the mess, saving you time and aggravation. It lets you bring on-line database dumps, transferred files, e-mail, or whatever else you get via modem into your application program directly.

QuickTalk won't make you save the incoming information as an ASCII text file and then clean it up by getting rid of unwanted carriage returns. Your application will treat data com-

With *QuickTalk* loaded, you can import data from PC MagNet, for example, directly into a WordPerfect 5.0 file without having to clean it up.

ing in from *QuickTalk* just as it would if someone were typing it on your keyboard.

QuickTalk takes up just 76K

of RAM. Whenever you want, just pop up *QuickTalk*, dial the computer or service of your choice, and hit F10 to transform

QuickTalk into your personal data-entry drone—all without leaving your original program.

QuickTalk is convenient for retrieving ASCII files from anywhere, not just from the telephone, and bringing them into any other program, whether it's a spreadsheet, database manager, or whatever. You can also use *QuickTalk* to download and upload files in the background while you work with other software.

If you live by electronic mail or download lots of files, *QuickTalk* may be just what you need to make life via modem a little less tedious.

List Price: *QuickTalk*, Version 1.21, \$79.95. **Requires:** 76K free RAM, modem and telephone line, DOS 2.0 or later. Not copy protected. SilverSoft Inc., 1301 Geranium St. NW, Washington, D.C. 20012; (202) 291-8212.

OS/2 Programming the Duncan Way

PC BOOK REVIEW

BY ROBERT L. HUMMEL

Writing programs for OS/2 used to be costly in terms of both time and money. But now, for a very modest outlay, you can acquire a suitable assembler or compiler and a copy of OS/2. Combine these with Ray Duncan's latest book, *Advanced OS/2 Programming*, and you can be writing OS/2 programs tonight.

Advanced OS/2 Programming contains everything you need to know to write character-based applications with the 250-plus OS/2 kernel functions. You won't find, however, discussions of object-oriented programming or the specifics of the Presentation Manager. Dedicated to teaching OS/2 programming rather than OS/2-speak, the author shuns the cryptic naming conventions, complex macros, and bloated header files usually associated with OS/2. Readers get straight talk and plenty of examples.

After reviewing the basics, Duncan plunges into advanced OS/2 techniques. This section

explains memory management, multitasking, interprocess communication, and techniques for direct hardware access. A final section covers special-purpose programs, including filters, device drivers, device monitors, and dynamic-link libraries (DLLs). The 270-page reference section provides complete

specifications of all OS/2 kernel functions, indexed alphabetically and topically.

Straightforward explanations, useful programming examples, and comprehensive reference sections combine to make *Advanced OS/2 Programming* an indispensable resource for all OS/2 programmers. A

companion disk that contains the source code for functions and programs is available from Microsoft Press for \$19.95.

List Price: *Advanced OS/2 Programming*, by Ray Duncan, \$24.95; companion disk, \$19.95. ISBN: 1-55615-045-8. Microsoft Press, 1601 N.E. 36th Way, Box 97017, Redmond, WA 98073; (206) 882-8080.

CIRCLE 434 ON READER SERVICE CARD

@Stat: Lotus 1-2-3 Math Manipulations

PC HANDS ON

BY BARRY SIMON

@Stat is a \$295 Lotus 1-2-3/Symphony add-on, published by the British firm 4-5-6 World and distributed in this country by Intex Solutions. As the name implies, it gives you additional @functions inside 1-2-3 that allow statistical and mathematical manipulations. Once installed through Lotus's add-on manager, @Stat acts exactly like the built-in Lotus @functions.

@Stat's 44 functions are divided into three sets: four general mathematical, including a

Simpson's rule numerical integration; 15 that analyze those numbers in a spreadsheet range that are also within a certain numerical range; and 25 statistical functions.

The core of statistical routines includes linear correlations, student's T-test, and percentiles. For many of these, two different versions of the function are included: one that analyzes a single range of numbers and a second that analyzes a pair of ranges that represent the values sampled together with their frequencies.

Keep in mind that spreadsheets with @Stat functions

will not be usable by 1-2-3 users who don't have @Stat.

For some, this product is overpriced—it would take me only a few days to duplicate the numerical analysis parts of @Stat in Turbo Pascal—but if you need statistical analysis and use 1-2-3, it may be worth buying, despite the high price.

List Price: @Stat, Version 1.0, \$295. **Requires:** 36K free RAM; Lotus 1-2-3, Version 2.0 or 2.1, or Symphony; DOS 2.0 or higher. Not copy protected. Intex Solutions, 161 Highland Ave., Needham, MA 02194; (617) 449-6222.

CIRCLE 435 ON READER SERVICE CARD

Power without pain.

Multi-table form dynamically displaying information from three related tables.

You don't have to be a programmer to have easy access to our highly sophisticated, powerful relational database, Paradox® 3.0.

Paradox 3.0 is all powerful and never painful because it makes all the complex inside moves, you don't. While it does the complex for you, the complexity is hidden beneath clear, natural, even intuitive pathways and patterns that make life easy for you.

With Paradox 3.0, there are no Unclears, no Unknowns. You don't need an army of in-house technical support people. And best of all, you *don't have to be a programmer* to be a pro with Paradox. It's all gain, no pain.

“Query-by-Example” for example

Use this checkmark and you're using QBE. It's that easy. Let's say you need to know in a hurry which of your Los Angeles customers bought more than 5 pairs of white shoes. First ✓ the customer field, then type "LA," "white," and ">5," and you're done. Paradox gives you the right answer right now. And how much programming to do all that? Zero.

If your database experience so far is limited to the flat-file type rather than relational, or even if a

spreadsheet is the only program you've used before, Paradox gets you up and running immediately with just a ✓.

Record-locking and Auto-Refresh make the network safely network

Paradox has become the leading networker because it handles multi-users intelligently. If someone in your group or network has accessed a record, automatic record-locking keeps everyone else from changing it.

That way, two or more people can't change the same data at the same time. (As a bonus, Paradox also tells you *who* is using a record at a particular instant.)

Once the record has been changed by someone in the network, *Auto-Refresh* kicks in *automatically* and updates everything. Everyone in the network is looking at up-to-the-minute information.

Paradox, for the looks of things

Presentation-quality graphics are another Paradox distinction. They give you and your work the professional look.

Paradox instantly turns your tables into graphs with *one* keystroke—and in multiuser environments, with a few keystrokes your graph can show up-to-the-minute changes. Not only does everyone get the picture, they get an accurate picture.

Award-winning Paradox Family

Paradox 3.0 is the latest addition to the award-winning Paradox Family. Paradox OS/2 and 386 received PC Magazine's BEST OF 1988 AWARD in the database category.

it out

To order a trial version of Paradox 3.0 (\$14.95) or a demonstration disk (\$4.95), call (800) 345-2888, extension 100. Paradox owners may upgrade (\$175.00) by calling (800) 331-0877. (Please have your serial number available.)

60 day money-back guarantee*

*Customer satisfaction is our most concern. The Heavy-Duty Word Processor for 1-2-3: All the Comforts of 1-2-3, Including 1-2-3

PC HANDS ON

BY CRAIG STINSON

The *Heavy-Duty Word Processor* for 1-2-3 sounds like a pretentious title for something that comes on two diskettes in a no-frills plastic box. But surprise! This \$45 item is a gem—for a certain class of user.

Not an add-in but a pass-through, *HDWP* is a word processor designed specifically for those who spend their whole day inside a spreadsheet. You invoke it by typing HD 1-2-3 at the DOS command line. DOS loads *HDWP*, and *HDWP* immediately invokes *Lotus 1-2-3* as a child process. From the spreadsheet, you can skip back to the word processor by tapping the 5 key. Quitting the word processor takes you back to the spreadsheet but leaves *HDWP*—and your current

The table below shows quarterly income figures by location for 1980. In you can see, *Greenhaw* outdid itself once again.

Location	Qtr1	Qtr2	Qtr3	Qtr4	Total
Berkank	\$194,258	\$286,258	\$273,225	\$273,758	\$947,475
Greenhaw	\$184,875	\$112,358	\$114,825	\$798,888	\$1,881,258
Pasadena	\$148,588	\$175,588	\$244,588	\$382,888	\$958,588
Tarzana	\$181,775	\$319,875	\$219,425	\$321,438	\$958,495

Commands are similar to those of 1-2-3, evoked with function keys or slash combinations. The rectangular border, shown above, can be changed to a spreadsheet border.

itself eats about 128K, so you'll need a full 640K to use it effectively).

Lotus dwellers will feel right at home in *HDWP*. The horizontal menu at the top of the screen, the flashing status indi-

cator in the upper-right corner, and even the retention of *Lotus*-style print commands (/Print Range, /Print Go, /Print Line) conspire to present the lowest-possible learning hurdle. You can even throw out the default rectangular window frame in favor of spreadsheet borders if you wish.

HDWP offers a respectable

array of editing features, including a simple search/replace (without wildcards or other fancy options), the customary block operations (copy, move, delete), an undo command, and the ability to define a custom menu of six print attributes. There is also a mail-merge capability (tailored to work with 1-2-3 databases), a built-in macro recorder, and a stand-alone spelling checker. Although the mail-merge facility works with spreadsheet databases, it also accepts data from any quote- and comma-delimited text file.

The performance of *HDWP* is satisfactory, if not spectacular; the program's biggest drawback in terms of speed is its insistence on updating the screen, line by line, as it carries out a search/replace or other global operation.

From the perspective of its intended user, probably the most significant virtue of *HDWP* is its ability to exchange data with spreadsheet programs. A /File Transfer command lets you import full or partial .WK? files into *HDWP*. The imported data can be from 1-2-3 (any version), *Symphony*, or even *Quattro*. More important, the worksheet in question does not have to be in memory; that means that *HDWP* can import

very large models as easily as small ones.

Going the other direction, a /File Xtract command writes out selected text from *HDWP* as a .WKS file. This file, in turn, can be folded into any flavor of 1-2-3 worksheet via /File Combine.

And just in case these transfer facilities aren't enough, *HDWP* sports a *DESQview*-like screen-capture utility that lets you mark any portion of a screen (text mode only) and port it into the word processor. This feature makes it easy to transfer your row and column headings along with your labels and numbers.

You can make the linkage between an *HDWP* file and spreadsheet data permanent and "hot" by means of a merge command. Just insert a merge marker as well as the specs for a spreadsheet file and range, and *HDWP* gets the current values from that range every time you print. A similar procedure allows you to hot-link to a *Lotus* graph.

HDWP is not going to intimidate *WordPerfect* Corp. It doesn't do columns, its tabs are fixed-width, it doesn't have a thesaurus, and it doesn't have style sheets. It's just a hassle-free, single-minded product that offers unusual value for the money.

PC FACT FILE

The Heavy-Duty Word Processor for 1-2-3, Version 2.0

BI-Intelligence Inc.
210 E. 86th St., #501
New York, NY 10028
(212) 439-6900
(800) 451-0303 (orders only)
List Price: \$45

Requires: 640K RAM (to run resident with *Lotus 1-2-3*), DOS 2.0 or later.

In Short: A well-designed, modestly priced word processor with features tailored for spreadsheet users. Not copy protected.

The *Heavy-Duty Word Processor* runs *Lotus 1-2-3* as a child and lets you toggle between the programs. It also lets you cut and paste between 1-2-3 files.

text—memory-resident; quitting the spreadsheet returns you to DOS and removes *HDWP* from memory.

The role reversal makes sense. Having *HDWP* play the parent, not the child, means you can also run it standalone. Or run it with any other application that doesn't overwhelm your memory resources (*HDWP* by

Appearances count.

Quattro: The Professional Spreadsheet

Good ideas usually vanish in bad presentations. Important data is missed because it can't be shown. Quattro®, meanwhile, lets you make colorful, graphic improvements in the way you make your spreadsheet presentations.

Quattro does the impossible.

Quattro's advanced graphics include graphs that *can't be done* by the leading spreadsheet. Quattro also includes more graph types than the best-known spreadsheet—like horizontal bar, line-bar, 3-D bar, and area charts.

Quattro's spreadsheet graphics are also completely and easily customizable. With Quattro's color at your fingertips, you can easily highlight, compare, analyze, print, present, discuss and decide.

Quattro is 100% compatible with the Other Spreadsheet.

Quattro is file, macro, and keystroke compatible with Lotus® 1-2-3*. Quattro can read and write 1-2-3 and Symphony* files, so none of your existing files are lost when you make the graphic switch to Quattro.

Quattro also understands database programs like Paradox* and dBASE* and can directly load and use their files.

Because Quattro is so compatible with the Other Spreadsheet, you can switch to Quattro without having to learn a new program.

It's all so easy and batteries *are* included.

Quattro's presentation-quality graphics are part of the spreadsheet program, not a separate program—which you incidentally pay separate money for. You print out your graphics from *inside your spreadsheet*, instead of being sent off to a separate print program.

Quattro is the way things should be instead of the way things are with the leading spreadsheet.

Quattro does it all *now*.

Quattro is colorful, picture-perfect and about half the price of the leading spreadsheet. At \$247.50 Quattro is an exceptional value and leading-edge technology.

Software Digest ranks Quattro #1 for "Overall Usability," so it isn't hard to make you and your work both look good.

After all, appearances count.

60-day money back guarantee.*

3X-LINK16 the LAN ALTERNATIVE!

3X-LINK 16
HIGH-FLYING
COMMUNICATIONS

**Connect up to 16 computers and printers
without network nightmares.**

Power file transfer

Imagine transferring files at 500,000 bps, without a network! Just plug a 3X-LINK16 cable into the parallel port on up to 16 computers, up to 400 feet cable length (your printer stays connected). Then run our software.

In just seconds, you'll be transferring files in full background mode! No need to interrupt your current program. And no need to interrupt your business as you install (and maintain) an expensive network. You can even transfer files automatically, using our auto-script feature.

Instant printer sharing

And our optional 3X-Spool16 intelligent printer spooling software lets you share connected printers (up to 16), automatically managing paper sizes all without waiting. And without buying limited, expensive printer sharing boxes.

Invisible E-Mail

What's more, our built-in E-Mail feature lets you send messages in background mode, no extra E-Mail software required.

The choice is yours :

3X-LINK16 comes complete with 3 1/2" and 5 1/4" software diskettes, parallel connectors, and a 12 foot cable... all you need to connect two PCs for only \$199. Additional stations can be added for \$139 each. 3X spool16, our printer sharing software option, can be added for only \$149.

And you get our 30-day money back guarantee to insure your satisfaction.

The only thing easier than choosing 3X-LINK16® is using it.

For more information or to order 3X-LINK16®, contact your local dealer or call:

PC UPDATE

by Elisa J. Hirsch

Lotus Plans Another Upgrade Path For 1-2-3

Soon after *Lotus 1-2-3, Release 3*, ships later this year, Lotus Development Corp. will begin selling *Lotus 1-2-3, Release 2.2*, an upgrade for owners of PCs not equipped with the extra memory and faster processors that Release 3 will demand. Release 2.2 will provide spreadsheet linking, undo, print style sheets, and a macro library manager. Macro learning, which is now available as an add-in for Release 2.01, will be incorporated into the main menu. Release 3, which will run under both DOS and OS/2, will incorporate all of these features, plus it will let users create layered or 3-D spreadsheets. Lotus expects to ship Release 3 in June and Release 2.2 several months later. Pricing has not been established. Lotus Development Corp., Cambridge, Mass.; (617) 577-8500.

Draw Applause Drives Film Recorders

Ashton-Tate Corp. announced the availability of new device drivers for its *Draw Applause* presentation graphics software. The new drivers support film recorders, laser printers, and electronic presentation systems including the Apple LaserWriter II PostScript printer, the General Parametrics VideoShow (Executive, Professional, and SlideMaker Image Recorders), and the Hewlett-Packard PaintJet color inkjet printer. The new device drivers are free for registered users of *Draw Applause* and are contained on one diskette. Ashton-Tate Corp., Torrance, Calif.; (213) 329-8000.

MicraSoft Adds an Accounts Payable Module

The *Small Business Accounting* series from MicraSoft now includes an Accounts Payable module. The upgrade allows users to print checks and various reports including discounts taken/lost, pending orders, and monthly ven-

An Accounts Payable input screen in the *Small Business Accounting* series.

dor purchases. The cost of the new module is \$125; however, registered owners of existing modules are entitled to a 50 percent discount (plus \$7.50 for shipping and handling). MicraSoft Inc., New Braunfels, Tex.; (512) 629-4341.

Enhanced 2-D Graphics for Lotus 1-2-3

The *Lotus 1-2-3* and *Symphony* graphics add-in, *2-D Graphics*, has been enhanced to mix line graphs and Hi-Lo-Open-Close charts with-

The enhanced 2-D Graphics package enables you to mix line graphs and bar charts in one graph.

in one graph. In addition, *2-D Graphics* now sports improved log-scale display, manual scaling of bar graphs, and expanded titles and legends. Version 1.01 of *2-D Graphics* retails for \$145 (plus \$5 shipping and handling). Upgrades are available from Intex for \$25 (plus \$5 shipping and handling). Intex Solutions Inc., Needham, Mass.; (617) 449-6222.

Generic Software Repackages Its CADD Software

Generic Software has added several modules to its CADD packages. *Generic CADD Level 3* (which has EMS support, hatches, and dynamic drag) now includes Generic's DotPlot, which allows CADD drawings to paint on dot matrix and laser printers, and DeskConvert, which converts CADD drawings into formats compatible with desktop and paint programs. In addition, *Level 3* includes pen plotter support. *Level 3* will sell for \$299.95. *Generic CADD Level 2*, which has auto-dimensioning and snaps to trims, will be enhanced with DeskConvert and PenPlot. *Level 2* already contains DotPlot and will retail for \$149.95. Generic's *CADD Starter Kit* now includes the updated *Generic CADD Level 2*, a CADD tutorial workbook, Generic's Basic Home Design Symbols Library, and several sample drawings. It retails for \$199.95. Generic Software Inc., Bothell, Wash.; (206) 487-CADD.

Freedom of Press Adds Color Drivers

Freedom of Press, Release 2.0, adds drivers for six color printers. In addition, Release 2.0 interprets files faster than previous versions. The color drivers provided by the new version support the Hewlett-Packard PaintJet, Howtek Pixelmaster, Xerox 4020 ink jet printers, and assorted 24-wire dot matrix printers from AMT, Fujitsu, and NEC. Upgrades are \$45 for all registered users, and new packages retail for \$495. Custom Applications Inc., Billerica, Mass.; (508) 667-8585.

12:00	Can do all Press Club with person association
1:30	Call NY Times re article on brain-damaged chip
2:00	Chancellor of Commerce business prop idea presentation
2:30	Chancellor of Commerce business prop idea presentation
3:00	Chancellor of Commerce business prop idea presentation

If the Market Crashes Again, He Can Always Become a Stand-up Comic

"Becoming the fourth-largest PC company [after IBM, Apple, and Compaq] is somewhat akin to becoming king of a Central African country in the 1960s—barriers to entry are low, but there is very little job security."

—Andrew J. Neff, Bear Stearns technology report, January 13, 1989

Wilde: I Wish I'd Said That. Whistler: You Will, Oscar, You Will

According to columnist Jerry Pournelle in *InfoWorld* (March 13, 1989), Microsoft's perceived plan to promote a 386-specific version of OS/2 over today's OS/2 286 "conforms to my prejudices. Last year I said the 286 was a brain-damaged chip. This year Bill Gates used that phrase."

To give credit where it's due, "brain-damaged 286" dates to 1987, when PC Magazine editor Bill Machrone keynoted the OS/2 Developers' Conference and thus described the 80286.

"NANNY—HE'S NOT THAT SMART. HE WON'T BACK UP HIS HARD DISK, FORGETS TO CONSISTENTLY NAME HIS FILES, AND PRODS ALL OVER THE KEYBOARD."

Have you seen anything offbeat about the computer industry? Send submissions to *Communiqué's* PC Magazine, One Park Avenue, New York, NY 10016. Don't make marks on submissions. Contributors receive \$50 and a PC Magazine T-shirt.

Winners this issue include Roger Sheadman (disk drive shakedown), Stephen Shore (SQL), Theresa Najma (mea culpa).

Introducing

The NEW Systemizer Plus

The Ultimate in Connectivity!

Up to 31 users can...

- Share Printers
- Share Plotters
- Share a Modem
- Share a FAX
- Exchange EMAIL
- Transfer Datafiles

Example: 17 micros (mixed brands, some on a LAN) and a mainframe, each equipped with a Systemizer Plus, sharing 3 printers, a plotter, and EMAIL.

Systemizing has become the connectivity standard at many of the world's largest corporations and throughout the federal government. Ten's of thousands are already in use. The new Systemizer Plus is the latest model in Applied Creative Technology's line of Systemizing products, and it delivers what 95% of corporate computer users want from a Local Area Network—at far less cost and complexity, and yet with much more versatility.

Corporate computing managers prefer Systemizing over other connectivity methods because it offers:

- Up to 62 IO ports, each parallel and serial capable.
- Compatibility. Mix PC's, LAN's, mainframes, laptops.
- Easy owner installation. Low cost cabling.
- 5 min. user training with no support needed after.
- Flexibility; readily accommodates growth and changes.
- Powerful distributed buffering (up to 31 Megabytes)
- Distributed processing for high speed and reliability.

Who Says FoxBASE+ is Better than dBASE?

The Experts!

The Best Just Got Better—Now Shipping New FoxBASE+ Version 2.10!

Nicholas Petreley, InfoWorld Review Board:

"FoxBASE+ has outdone itself. Once again, FoxBASE+ earns an "excellent" in performance, with kudos for responding to user suggestions. For sheer productivity, there is no other choice." *InfoWorld* "Editor's Choice" for 1987 and 1988!

P.L. Olympia, Founder & President, National Dbase Users Group / Government Computer News:

"FoxBASE+ is a supercharged dBASE, with all the features Ashton-Tate forgot. If you're into serious dBASE development and have not tried FoxBASE+, you are living in the dark ages and wasting your company's money."

George F. Goley IV, Cont. Editor, Data Based Advisor:

"The product is fast, very compatible, fast, easy to use, fast, relatively inexpensive, and very fast. In every test, FoxBASE+ outperformed the other products. And people who answer the phone at Fox know what they are talking about."

David Irwin, Former President/CEO, Data Based Advisor:

"From the dBASE compatibility standpoint, FoxBASE+ is flawless. From the speed standpoint, FoxBASE+ is unbelievable. From the "lazy factor" standpoint, FoxBASE+ is perfect."

Glenn Hart, Contributing Editor, PC Magazine:

"Initial tests of FoxBASE+ were simply stunning. In many ways, FoxBASE+ gives you the best of both worlds: all the benefits of interactive development and debugging, plus the speed and code protection of a compiler."

Adam Green, Contributing Editor, Data Based Advisor, dBASE Author:

"For the PC, FoxBASE+ has consistently set the performance standard for dBASE compatible languages. For the Macintosh, FoxBASE+/Mac will set standards for innovation and leadership in a new dBASE implementation."

Don Crabb, Contributing Editor, InfoWorld:

"You can expect blazing speed on the Mac. FoxBASE+/Mac breezes past tests that have proven stumbling blocks for Macintosh databases in the past. FoxBASE+/Mac combines complete dBASE compatibility with a genuine Macintosh user interface."

This is what they said about Version 2.00 of FoxBASE+. Imagine what The Experts will say about New Version 2.10 with these added features: Menu-Driven Interface, Program Documentor, Screen Painter and Template-Based Application Generator . . . and Version 2.10 is even faster than 2.00!

Join The Experts. Get your copy of the New FoxBASE+ Version 2.10 today! Now available at your nearest, quality software retailer, or directly from us by calling (419) 874-0162 Ext. 760.

Because, when it comes to speed, compatibility and value, nothing runs like the New FOX—Version 2.10!

■ BILL MACHRONE

THE THRILL IS BACK

In the world of laptop computers, there's a definite pecking order. The Radio Shack Model 100 is chicken feed and the NEC UltraLite rules the roost.

I first started carrying a laptop in the summer of 1983. That machine was, of course, the Radio Shack Model 100. It was my constant companion for nearly 6 years. Until last fall, virtually every column and article I did for *PC Magazine* was written on that machine. It kept me in touch on three different continents through MCI Mail. It logged enough frequent-flyer miles to qualify for round-trip tickets anywhere in the solar system. It was x-rayed more often than Joe Montana's knees.

The Model 100 caused a furor wherever it went in those early days. On the train to New York one day, a man leaned across the aisle and asked, "Is that a computer?" He regarded it and me with suspicion for a moment, and then asked in a stage whisper (so the computer wouldn't overhear, I presume), "What's it telling you?"

A woman on a coast-to-coast flight spied me working away in my aisle seat and deduced that I was a writer or an editor. She proceeded to tell me her life story: her divorce, poems she'd written about her dentist, the challenge of being a suburban matron in the latter part of the 20th century, and more. Flight attendants worked around her as she went on. I prayed for turbulence and a seatbelt sign. They never came. An hour later, I finally got back to my work. The man next to me, having feigned sleep so that he wouldn't have to get involved, opened one eye and said, "If you'd just carry a calculator like normal folks, that wouldn't happen."

NEW RESPECT In the last few years, however, those awestruck expressions on

the faces of the uninitiated have been replaced by the patronizing looks of computer-savvy passengers on planes and trains. The Model 100 isn't a serious machine in the minds of serious users.

Now that the NEC UltraLite is my travelling companion, I'm getting raised eyebrows and approving looks. I'm also getting questions just like the good old days. Wow, an UltraLite! Is the keyboard really OK? How's the battery life? Where can I get one? How much does it cost?

The first time I used an UltraLite on an airplane, it caused a small commotion. It was a prerelease machine, so I couldn't answer any questions about it. But my fellow passengers couldn't help noticing its diminutive size, sleek styling, and backlit screen. One guy looked at his big Zenith, then at the tiny UltraLite, and asked, "How long do I have to wait?" The guy across the aisle watched enviously while I slipped the UltraLite into a slim leather

portfolio as he wrestled with the carrying case for his Toshiba 1200HD.

When I first saw the Model 100, I called it *The \$795 Cure for Loneliness*. Times have changed, prices have risen, but the effect of the laptop remains the same.

EXECUTIVE GADGET When we did a First Look on the UltraLite, we called it a "laptop for the executive set," and that's certainly proving true (see "NEC's 4.4-Pound UltraLite Sets a New Standard for Portable Machines," *PC Magazine*, November 15, 1988, page 33). Lotus's Jim Manzi and all his vice presidents use UltraLites, mostly as portable *Agenda* machines.

One of the criticisms leveled against personal information managers is that they're of little use unless they're always with you. A lightweight laptop is the hardware embodiment of a PIM: you can take it anywhere. The UltraLite is no larger or heavier than a full-size Day-Timer. And, as Lotus's Bob Frankston says, it's not a write-only medium.

Other manufacturers have cast covetous eyes on the UltraLite's market, but they'll have an uphill fight against NEC. As I use the UltraLite more, I become increasingly convinced that it will retain market share even against equally light laptops with 2-inch floppy disk drives and lower prices. NEC's silicon hard disk dishes up performance and instant file saves that no floppy can hope to match. Besides, would you tolerate a Day-Timer if lights flashed and disks whirled every time you made a note or tried to find something?

"RAM-Resident" Is No Longer A Dirty Word.

Remove, Replace, Even Deactivate RAM-Resident Programs Without Rebooting Your System!

If you use RAM-resident programs such as spell checkers, desktop organizers,

Other products gobble up to 40K of your precious memory. PopDrop provides a complete RAM management system with power and flexibility while occupying only 0.6K for the first layer and 0.2K for additional layers.

print spoolers and keyboard macros, you know these "pop-up" programs provide convenience and enhance productivity.

The problem is managing them. Some create memory or keyboard conflicts and therefore can't be loaded with others, while some gobble up so much memory that you can't use anything else. PopDrop solves these problems by allowing you to actually remove, replace, even deactivate RAM-resident programs—without rebooting your system!

PopDrop will support expanded memory (EMS), so you can manage the "new-generation" RAM-resident programs like *Sidekick Plus*, *WordPerfect Library* and *VCache*. And PopDrop also allows easy removal of popular network software.

Voted one of "The Best Of The Best Utilities" by *PC Magazine*, PopDrop is an invaluable PC tool.

PopDrop Divides Your RAM Into "Layers"

PopDrop works by dividing your memory into layers (up to 16), each of which may contain several programs. After loading DOS and your application programs, RAM-resident programs are loaded with these layers between them, the most permanent at the bottom, the least permanent at the top.

You can create batch files to remove layers one at a time, or several at once.

Available on 5 1/4 inch or 3 1/2 inch diskettes. It is compatible with IBM PC or compatible and the PS/2, VGA, MasterCard or AMEX accepted. Add \$4.50 for shipping. Florida residents add 6 percent sales tax. International orders add \$10.00. Please include street address—no P.O. boxes please.

PopDrop Keeps Tabs On Your Memory Usage

Our unique "PopView" screen feature displays exactly how much memory is being used—you'll never see another "Insufficient Memory" message.

Program	Size	Layer	Free	Used	Total	Free	Used	Total
MS-DOS	1024K	1	1024K	0K	1024K	1024K	0K	1024K

The PopDrop "PopView" Screen. From here, you can see which programs are loaded, how much memory each consumes, and how much is free.

Control Your RAM

If you want to run a RAM disk, a print spooler and one or more pop-up programs most of the time, but need them out of the way to work on a large spreadsheet, you can do it easily with PopDrop. You can also "activate" and "deactivate" programs in a specified layer of RAM that may conflict with the program you're using.

PopDrop™
Just \$49.95

■ BILL MACHRONE

The UltraLite is a design tour de force, squeezing more computer into less space than ever before. While no computer is perfect, using the UltraLite daily hasn't uncovered any major flaws other than the obvious ones mentioned in the initial review. For my daily commute, battery life is no problem. A little less than an hour's working time each way puts me right at the edge of the machine's battery life, but then it has all night to recharge. If you don't use the UltraLite on a commute, the 2-hour life is enough for frequent use throughout the business day, especially if it can recharge over lunch. For my transcontinental commute, 2 hours isn't enough. NEC won't sell you a spare battery pack because it doesn't consider the battery to be user-replaceable. A ham-handed user could, in fact, damage the main circuit board. I can't tell you where I got a spare, but it's a god-send and I'm being very careful.

The production model gained a pop-up setup program in ROM that wasn't in the first unit I tested. It controls backlight brightness, color-to-LCD display conversions, and other odds and ends. Utterly lacking are control over the cursor blink and keyboard repeat rates. I harnessed the former with SkiSoft's *No-Squint Laptop Cursor*. I find the standard repeat-key rate to be intolerably slow, especially in moving the cursor; here, a classic *PC Magazine* utility came to my rescue. *QUICKKEYS* consumes only 672 bytes and works like a charm. You can download it from PC MagNet, and it works for almost any PC or XT compatible. Microsoft's *MS-DOS Manager* is one of the 455K worth of DOS programs and utilities hiding as drive D: in the UltraLite's ROM, but I don't have the patience for it. I use Michael Mefford's *PC Magazine* file utilities, RN and DR.

SOCIAL CHANGE The UltraLite and its eventual competitors will change the way computers are perceived and used by executives and managers. Today, in most quarters it's considered gauche to be typing while conversing with others, even if it's just to look up an item that contributes to the topic at hand. Nevertheless, we've all been in meetings where the participants read their mail. Old attitudes die hard, but the UltraLite will help change them. It has a rightful place in the revolution. ☐

Introducing Lucid 3-D. Version 2.0!

A Remarkable New
Spreadsheet
at a Familiar
DacEasy™
Price!

\$99.95
(Suggested Retail Price)

Home Office
EDITORS' PICK

1987 Winner

Application Software

Version 2.0 of Lucid 3-D is more than a bag of new features. It's a masterpiece! The original Lucid 3-D captured the industry's attention with its simple to use, yet remarkable three dimensional capabilities. Last year's winner of *PC Magazine's* Award for Technical Excellence, Lucid 3-D is fast, even on a 256K, 8088 computer. Lucid 3-D is the super spreadsheet that doesn't require a super computer!

DacEasy is proud to produce this leading edge product. Its innovative design allows first time users to learn quickly while power users of other spreadsheets move to our advance features effortlessly. The Lucid 3-D featured pull-down menus, optional instant command keys, multiple windows, a notepad in every cell, optional ram, total

"Lucid is a spreadsheet for our times. It is technical tour de force in an era that seems to have forgotten how to write tight code." PC MAGAZINE

"You might think that a RAM resident spreadsheet would necessarily be limited in features. We found that Lucid 3-D is anything but limited in power." INFO WORLD

"Lucid 3-D is a package that could alter the face of future spreadsheets. It offers residence, multiple windows, colour, mouse support and rapid execution." PC USER

Version 2.0 is Even More Amazing!

Lucid 2.0 has vastly improved speed of recalculation of 3-D models due to the minimal 3-D recalc. Huge multi-megabyte models with complicated linking

which would have taken over an hour now takes less than a minute! Version 2.0 can now accept files as big as RAM (up to 8 megabytes) with models as large as allowable disk space. Lucid 2.0 can now read and write 1-2-3 and dBase files directly.

Create bar and pie charts; line graphs and more, directly from your spreadsheet.

You can open unlimited windows (up to nine on a screen) in different directories, drives, & 3-D levels.

mouseability and both a reference and tutorial manual. These features alone make this spreadsheet a must buy at only \$99.95. It's no wonder Lucid 3-D was voted Editors' Pick for 1988 by *Home Office Computing*.

3-D Graphics
Unlimited Spreadsheet Size
Reads And Writes Lotus® Files Directly
3-D Linking Of Any Cell Range

by
DacEasy

Version 2.0 makes doing "what ifs" a pleasure! Now build your 3-D spreadsheet (the wave of the future) by linking any range of cells to another spreadsheet. What's more, do graphics instantly (includes 3-D bar charts) by just selecting a range. Customize colors for any cells, and use the enhanced text inserting library feature. Further, you can now instantly have up to nine windows of your 3-D levels showing on the screen at once. And that's not all, 38 other new features make spreadsheeting really exciting!

Buy Lucid 3-D for only \$99.95 at all leading retailers. Upgrades to Version 2.0 are only \$35.00. For more information call us at our toll-free number!

Solutions For Your Growing Business Come with One Name. . . *DacEasy™!*

"The Breakthru 286 achieved the best performance results of the caching boards tested."
Ted Mirecki,
PC Tech Journal
(Rated #1)

8MHz \$395
12MHz \$595

Breakthru 286™

New by DacEasy is the Breakthru 286 speedup board, the most advanced turbo board for your business dollar. Available in two clock speeds (8MHz and 12MHz), and providing the most cost-effective way to convert your PC (most clones and Compaq portables) so that it's faster than an AT without the expense. Simple 1-2-3 installation of a half card and there's no software required! Software compatibility is universal so all system RAM, hardware, and peripheral cards can be used without modification. Breakthru works with LAN and mainframe communication products and conforms to the Lotus/Intel/Microsoft Expanded Memory Specification (EMS). And included with your board, is DacEasy Lightning™, a disk-caching program (*PC Magazine's* 1986 Editor's Best) that retails at \$69.95, yours absolutely **FREE**.

\$69.95

DacEasy Light™

A great way to do personal and business finances without being an accounting expert. For the home, you'll be able to track your financials, reconcile bank statements, and budget your cash flow for the year. Don't worry if you don't know a debit from a credit, because with Light, all you see are familiar formats such as checks and credit card slips! If you're a sole proprietor or if your business doesn't require extensive accounting capabilities, Light performs multi-level, double-entry accounting behind the screen so you can easily track customers, vendors, sales and expenses. With Light you can easily generate invoices, statements and the option to enter manual checks or use preprinted checks. And forecasting a 12-month budget is a snap. Fast becoming the people's choice for home/office in IBM and Macintosh environments.

\$69.95

Lucid 3-D™

All new, by DacEasy, version 2.0, the most incredible spreadsheet value. Simple to use (even for beginners!), yet remarkable for its three dimensional capacity and beautiful graphics. Transport accounting data into Lucid for budgets and proposals without ever keying. Winner of the coveted *PC Magazine's* Technical Excellence Award (1987) and *Home Office Computing Editors' Pick* (1988).

DacEasy's newest way to save time and keep track of people, places and events at the touch of a key. For any home or office, there's never been an easier, more organized way to create, update and print Rolodex cards, custom labels and envelopes. Instant lookup (pops up over any other software) for tip of the tongue information. Bring your Rolodex cards to life!

■ JOHN C. DVORAK

THE SUN CLONE ALSO RISES

By encouraging others to spawn SPARC machines, Sun hopes to clone the success of the IBM PC. But without Big Blue's marketing prowess, Sun may lose out to the new breed.

"It seemed like a good idea at the time." Those are the words, I'm afraid, that Sun Microsystems will be repeating in a couple of years to defend the bet it's placing today—a gamble that will affect us all.

Sun is trying to encourage other vendors to clone its pricey workstations, especially the SPARCstations. It doesn't take too much research to unearth the company's peculiar scheme. A recent visit to the offices of BIOS cloner Phoenix Technologies revealed a presentation Phoenix is making to cloners for its services. Phoenix hopes to cash in big on a future world of Sun clones.

Sun decided that the popularity of the IBM PC was greatly enhanced by its early "open" architecture and the subsequent cloning and popularizing of the PC design by everyone who could piece together a few boards. The bandwagon effect made everyone rich.

Sun is hoping that if the same bandwagon effect takes place around the Sun machines running an updated Unix and based on either the Motorola 680X0 chip family or the Sun-designed SPARC chip, then the market will blossom for personal workstations. In fact, the workstation company figures that the market will explode and make Sun a corporate behemoth—even if its actual market share diminishes. It will be just like what happened with the IBM PC—even though IBM's share of the PC market shrank, its revenues grew fantastically.

It sounds like a good idea, doesn't it? Well, maybe as a desperation move. This

idealized marketing concept is almost laughable, and I think we should all get ready for a big belly-laugh.

Sun's model for future success ignores too many facets for me to pass it by without comment. First of all, IBM never intended the PC scenario to happen the way it did. Big Blue didn't even like the results and has changed its strategy to prevent its happening again.

Note: Above all, IBM is a marketing company. Sun is a techie-nerd company with little, if any, marketing prowess. Therein lies the rub. I once told a friend that the way Sun sells its computers is to have some guy follow a DEC salesman around and visit the same companies, armed with a better deal and the Sun "open systems" pitch. That strategy works fine with DEC accounts. But ask Sun how retail sales are doing for its 386i machine. "What retail sales?"

Also, Sun doesn't make a plug-and-go

machine. It takes a lot of work to get a Sun running. If Dell or CompuAdd, for example, cloned a Sun and added some user-friendly notions and a cut-rate price, then who would buy a Sun?

The basic mistake Sun makes with this concept stems from the same arrogance exhibited by DEC when it entered the PC world with the now-defunct Rainbow. Digital assumed that people would buy the Rainbow because it was made by DEC, a world-famous company. World famous? Who, except people in the computer business or customers who are already using a VAX, has ever heard of DEC? Ask your mother if she's ever heard of DEC. Ask your mother if she's ever heard of Sun. Then ask her if she's heard of IBM. See what I mean?

I'm greatly amused that Sun has the collective ego to imagine—even remotely—that it can copy the IBM PC's success with a similar, but overt, marketing ploy. I'll tell you, it sure misses the point. It's kind of like watching Arnold Schwarzenegger win the Mr. World contest and saying to yourself, "Gee, if I wore those tight red shorts, I could win that contest too!"

If a wave of Sun-clone workstations comes into our lives and leads the way to new computing power, then you can be sure of one thing: Sun will be the loser as it gets undersold, undercut, ripped off, and outmaneuvered by the faster gunboats now playing in the world of the PC. Sun has been basking in the lazy netherworld of the minicomputer customer. They don't know what hardball is all about. Hey, but I like the machines. I wish them luck.

Why Buy A Library When A Single Volume Has It All?

You could spend close to a thousand dollars buying all the software pictured above.

Or, for a fraction of the price, you could get all of their best features in one easy-to-use utilities package: PC Tools® Deluxe.

PC Tools Deluxe is the most complete and capable utilities product available at any price.

It includes data recovery utilities for recovering accidentally deleted files or repairing corrupted disks. Its resident DOS shell allows you to view multiple directories simultaneously and copy or move files with just a click of a mouse. The hard disk backup program is fast,

has an adaptable data compression feature for cutting backup time by as much as 50 percent, and even tells you how long the backup will take and the number of disks you'll need before you start. There are file unfragmentation and disk-caching utilities for enhancing your system's performance. And PC Tools' desktop manager features a unique windowed environment, full mouse support, pull-down menus and context-sensitive help that make learning and using the product a breeze.

So before you invest in an entire library, check out PC Tools Deluxe. With more than a half million copies in use, it's on everybody's best sellers list.

INSIDE TRACK

The death of assembly language; uninterruptible power.

It's no coincidence that the popularity of C and other high-level languages comes at a time when an influx of **incompatible microprocessors** is headed our way. By incompatible microprocessors, I mean the RISC chips: SPARC, MIPS, 88000, and i860, for starters. According to industry pundit George Morrow, this influx of chips will worsen, and it's all a result of Motorola and Intel's decision to cease second-sourcing the 68000 and 386/486 chips. Morrow, once the head of Morrow Designs, a defunct CP/M computer maker, knows that all manufacturers get nervous if they don't have more than one source for their required parts. The thinking goes that today's manufacturers will flock to a new microprocessor that is easily available from many sources. We can expect a **deluge of different processors** all claiming to be the chip of choice. Most of them will use the easy-to-design RISC architecture. RISC-mania has gotten so crazy that Intel and Motorola joined the fray unaware of the consequences.

Doomsday scenario: As soon as more than two processors become popular, assembly language code writing will die. It will be in the best interests of programmers to write programs in high-level languages that can be ported. This trend has been predicted for years, but the small number of mass-market platforms and memory limitations, combined with **slow processor speed**, have kept assembler alive. All of these factors will change. In chaotic times, uncertainty itself demands high-level language coding. "They went broke? OK, I can port to something else tomorrow!" This is very much a newer, **weirder version** of the desktop computing market of 1977.

Ask Microsoft, Borland, or any other seller of high-level languages; they'll all

tell you that the language business, specifically C and Pascal, is **hotter than ever**. The boys at Symantec are stunned by the sales of the Lightspeed products that the company acquired. Assembler is going down fast. Once it dies, then the importance of the individual chip with its peculiar instruction set will diminish. All that will count will be performance and price. Do you see the vicious circle here? Tough sledding ahead for Intel and Motorola.

(Meanwhile, I'm waiting to see what happens when someone rolls out the chip of chips: a **bit-slice RISC transputer chip with built-in floating point, cache, and digital signal processing.**)

Scorn the Users Dept.: I've never seen a phenomenon quite like this. Last year System Enhancement Associates (SEA) and PKWare got into a **legal battle** over the use of the .ARC file extension, which SEA claimed was its property. SEA invented modern micro Archiving software. Over time, Phil Katz at PKWare developed archiving and dearchiving software that many users preferred. He also made the stuff compatible with the SEA.ARC format. Software from both companies worked with each other's files nicely. Then came the suit. Well, SEA won the **legal battle**, and PKWare was forced to stop providing compatible dearchiving software and couldn't archive a file with the SEA format and the .ARC extension.

Boy, did this make truckloads of BBS sysops **steaming mad**. Phil Katz went to work and developed a system called ZIP. A slug of programmers wrote programs that converted the tonnage of .ARC files into .ZIP files, and now .ZIP appears to be the new standard for shrinking and archiving programs and documents. The BBSs around the country

have **simply rebelled** against the legal action taken by SEA. The thinking goes thus: "We're all in this together, and we can all profit if someone doesn't get greedy." SEA was perceived as greedy. In my years as a student at Cal Berkeley, I saw **riots and boycotts and sit-ins** of all sorts, but this is the most interesting grass-roots boycott movement I've seen yet. The boys at SEA think it will pass. I'm not so sure. My advice to those of you who rely on software to shrink and archive files: Get a copy of **PKZIP**. (You'll find it on most BBSs and CompuServe.) This is a case where the loser of the lawsuit **profited immensely** from the publicity and public sentiment. The instigator of the lawsuit seems to be temporarily, at least, damaged. Lotus, Ashton-Tate, Apple, and other **litigious firms** should examine this phenomenon.

The Mature Computer User Dept.: It was Stan Hayes of Ad Works in Atlanta who talked me into doing something I've resisted for years: adding an **uninterruptible power supply (UPS)** to my computer system. I'm now pleased as punch, especially since the thing already saved one file during a very short **power outage** caused by a storm. And the next time there's a blackout, I can unplug the computer, plug in a 150-watt lamp, and keep the room lit for nearly an hour. These things are actually **fancy batteries** with all kinds of power conditioning and regulating circuitry. Who needs surge protection with one of these babies online? If you're running a network in rural Anyplace, U.S.A., you need a UPS, **let's face it**. Even without LAN or rural **paranoia**, these things are generally a good idea. I was loaned the Taesung (TSi) Industries 3160H, made by Samsung and sold by TSi of Alpharetta, Georgia ((404) 664-8944). It's flawless and surprisingly compact. Expect to pay \$350 to \$450 for one of these units. Highly recommended. ☐

Do they call it a h it's so hard to find wh

You're looking for a specific piece of information on your PC. But you can't remember which memo, spreadsheet or even which file it's contained in.

And you're certainly not about to

search through each directory, much less load and unload every file to find it.

That's why we created Magellan.[®] The first utility that helps you find your files by letting you instantly see their contents as

The Speed of Lightning

Keystrokes. Screen updates. All virtually as fast as the applications program. That's the result of REMOTE²™ error-checked, data compressed link. It won't keep you waiting.

The Cost-Efficiency of Scrooge

Some programs want you to buy both parts—the calling program and the host program—even if you only need one. Not REMOTE². It comes in two parts—R2HOST™ and R2CALL™. Buy either. Or both. Whatever you need. And no more.

The Flexibility of Rubber Man

R2HOST isn't snobbish. It'll take a call from R2CALL from one of the Crosstalk Communications programs, from almost any other communications program, or from a communications terminal. R2CALL connected with R2HOST does give you all of the power and features of REMOTE² including exact keyboard mapping and the ability to transfer files with error-checking even while an applications program is running.

The Heritage of CROSSTALK[®]

You'd expect a remote control program from the makers of CROSSTALK to be more advanced. We've been leaders in PC communications since the beginning of PC communications.

That's REMOTE²'s family tree. And it shows.

Better, more convenient remote control for almost any application you can think of. Support. Training. Collaboration. Branch office or home computing with a central PC.

REMOTE² essentially puts you in front of the remote computer. You have total control of the keyboard, DOS or any applications software. And what you would see on the remote computer's screen, you see on yours. Instantly.

It also provides a wealth of features that make it more efficient and easier to use. A chat window so that you and the person at the distant computer can chat without disturbing the application that's running. An integrated help system that provides help for wherever you are. A phone book of commonly used numbers—along with their communications settings. LAN and mainframe access. And an activity log.

If you need to operate a distant computer by remote control, look at this one—REMOTE². From the makers of CROSSTALK. See your dealer or contact us for details.

THE WINDOWS TEST

DOS is going to stay in charge for some time. But to make up for its shortcomings, we've got to find a good second-in-command. Can Windows meet the need? Well, maybe.

People with strong views on The Future of Personal Computing often get caught up in arguments that focus on the wrong issues, or in apples-and-oranges comparisons that provide heat but shed little light.

One example of these inapt comparisons is found in the debates over whether DOS or OS/2 will be the next-generation power-user operating system for IBM PCs. The flaw here lies within the question. The issue isn't really DOS vs. OS/2, but Unix vs. OS/2.

HERE TO STAY DOS is going to be around for a long time. The idea that we're all going to wake up some morning soon, decide we can't live with DOS any longer, then feverishly clutch OS/2 to our breasts, has been thoroughly discredited—in these pages and elsewhere.

Let me set aside OS/2 vs. Unix for another column. Whatever the outcome of that battle, DOS is going to remain important and—for at least several years to come—dominant.

What I wonder about is the form in which we'll use DOS. I see DOS undergoing a metamorphosis. While DOS will reign well into the '90s, it's not going to be DOS as we know it today. It's going to be DOS Plus Something. The interesting question is, DOS Plus What?

INEVITABLE INTERFACES Part of the change—but only part of it—will be the inevitable migration toward graphical interfaces. Most "Is DOS Dead?" analyses make too much of this: many of us

neither need nor want graphical interfaces for most of our work . . . at least not at this time.

Few *WordPerfect* users, for example, are ready to give up the clean look and snappy performance of their favorite word processor just to get pointing and clicking. Ditto for users of *dBASE*, *Paradox*, *1-2-3*, and many other widely used PC applications.

But I call that migration inevitable because, as more programs appear that were designed from the ground up to be used graphically, more of us are going to be seduced by the legitimate charms of the graphical interface.

Another deficiency is memory management. Clearly the days of the 640K barrier are limited. Now we have so many ways to make end runs around 640K—from EMS and EEMS memory boards to such control programs as *Windows/386* and *DESQview*, from memory managers such as *386-*

to-the-Max to hardware workarounds such as the All Chargecard—that no one who really needs more memory need stay within that limit.

The third gap that needs filling involves ease of use. As the DOS market has expanded downward explosively over the past 3 years, lots of people who have been swept into the PC-compatibles world refuse to put up with the stupidities of DOS's command-line interface and syntax.

They're right, of course: those of us in the grizzled-veterans camp learned to put up with DOS's shortcomings only because we're zealots. But personal computing is becoming a mass phenomenon, and zealots don't make mass markets.

So what looks like the winner?

THE MULTIPANED FUTURE The easy choice, the one I want to say will be the winner, is *Microsoft Windows*. I like many things about *Windows*. But even in its latest versions, it is still operationally clumsy, as well as being a performance burden.

Windows, which—among other fail-ures—requires navigation through long lists of filenames, falls far short of a true graphical interface. And though *Windows*' performance improves with fast 286 and faster 386 PCs, a winning DOS-Plus-Something product is going to have to work well enough on 8088/8086 machines, too.

Some of the pundits in the industry predict 1989 will be The Year of *Windows*, when a critical mass of us succumb to its

■ JIM SEYMOUR

charms and migrate into the multipaned world of the future.

For some time, I have been posing a test as a leading indicator, or early predictor, of that moment. That test is simple: I'm looking for people who've begun using a mainstream *Windows* application—say *Microsoft Excel*, or maybe *Aldus's PageMaker*, or *Micrografx Designer*, or another native, no-choice-about-it *Windows* product—and have decided that they like the *Windows* environment so much that they want to stay inside that world and start searching for other native *Windows* applications to round out their basic applications-software tool kit.

I've come to know a lot of perfervid users of *Excel* and *PageMaker* and *Designer*, but not many who've decided they want to stay in *Windows*. Some use non-*Windows* apps full-screen sometimes, and occasionally run even more than one non-*Windows* app at a time, in tiled or overlapped *Windows*. But as much as they may like *Excel* or *PageMaker* or *Designer*, these "leading-indicator users" typically exit *Windows* and work in a straight DOS environment with their other programs.

Since those three programs are so good—if you don't like *Excel*, it's hard to imagine that you have much enthusiasm for any business software on the PC!—you'd think they'd have the effect of promoting *Windows*, pushing people along the path toward adopting or trying to adopt the *Windows* world as *their* world.

But that hasn't happened yet.

Such alternatives to *Windows* as *DeskMate*, *DESQview*, and *VM/386* are interesting but carry distribution, performance, or computing-power liabilities; they're unlikely bets for widespread use.

So I remain stumped as to what's going to become the winner in that DOS-Plus-Something market.

Clearly, the PC community has become a more pluralistic world over the past year or so; we support far more diversity than we did 3 or 4 years ago. Perhaps that pluralism will be the answer to the question, *DOS Plus What?*

The part I'm certain about is that DOS can't stand alone much longer . . . but is far too hardy to fall before the likes of OS/2. □

Not only does Telebit make the world's fastest modems, we also endorse your checks.

If you're looking for a high-speed, dial-up modem that endorses industry standards and more, check out the Telebit® T2500.

As well as transmitting data error-free at a lightning-fast 19,200 bps with Telebit's PEP™ modulation, the T2500 also adds V.32 to its modulation list. That means you can automatically use the CCITT V.32 standard for synchronous or asynchronous connections.

So, for large-volume or interactive transmissions, you won't find a better modem than the Telebit T2500. It supports all major modem standards, and is ideal for connecting micros to LANs or mainframes. Plus it easily handles international transmissions. And speaks fluently with more dial-up modems than any other.

In addition to the industry's highest data rate, Telebit's multicarrier PEP technology makes hang-ups and bad line problems a thing of the past.

To find out more about the world's fastest modem, call 1-800-TELEBIT today. Or write us at 1345 Shorebird Way, Mountain View, CA 94043-1329. Phone: (415) 969-3800.

Some views on why the NEC MultiSync

There's a lot more to the new MultiSync® 3D monitor from NEC than meets the eye. Because instead of making one monitor for each

graphics board, we've developed a monitor that enhances

the performance of the modes on practically *any* board.

With its new microprocessor-controlled digital tuning system, MultiSync 3D can adjust to a given video standard with a precision matched only by a few high-end single-frequency monitors.

Making it perfectly compatible with virtually all systems and boards. From 8514A, SuperVGA and Mac II to VGA, EGA, MDA and

3D is the new monitor standard.

CGA. For an incredible maximum resolution of 1024 x 768.

What's more, MultiSync 3D is equally compatible with you and your workplace. There are upfront controls, for easier access. A 14" non-glare screen on a tilt-swivel base, for more comfortable viewing. And, as you can see, there's even a full 360 degree design.

Side

The way we see it, MultiSync 3D

Top

has dramatically raised the

standards by which all other color monitors will be judged.

■ WILLIAM F. ZACHMANN

ADVENTURES IN CYBERSPACE

Journey through the cyberspace of on-line communications and meet the people who inhabit this brave new world. A PC and a modem will take you there.

In William Gibson's Hugo Award-winning 1984 science fiction book, *Neuromancer* (the ultimate hacker's novel), characters in a future world "jack in" to a parallel reality of "cyberspace." Somewhat like the hallucinatory but real worlds of the shaman in Carlos Castañeda's tales of the Yaqui Indian sorcerer Juan Matus, Gibson's cyberspace has complex (and potentially deadly) intersections with the ordinary world of experience.

CLOSE ENCOUNTERS After many months of spending 2 or 3 hours a day reading and sending messages on PC MagNet and CompuServe, I have been struck recently by the degree to which intense immersion in on-line communications evokes aspects of the cyberspace world that Gibson describes. Just as Gibson's characters encounter one another sometimes in cyberspace and sometimes in ordinary reality, one encounters others in the on-line world as well as in real life. There are even people I've encountered almost daily for weeks now whom I have never met—except electronically in the form of ASCII text strings.

If graduate departments of sociology or anthropology were on their toes, they'd be doing studies of this emerging electronic society. It isn't often that one has an opportunity to be a participant/observer in a radically new form of human society. What makes it even more interesting, however, is that new cyberspace communities like PC MagNet's are almost certain to become a normal part of human life as we approach the year 2000.

Already, electronic information services, electronic-mail systems, and bulletin boards are in daily use by hundreds of thousands of people. In addition to major services like CompuServe, MCI Mail, Dow Jones News Retrieval, The Source, and others, there are hundreds of small local bulletin board services for various user groups.

With no more than a personal computer, a modem, a telephone line, and software like Fort Lauderdale, Florida-based Galacticom's *The Major BBS*, anybody can create a cyberspace domain. And, indeed, more and more businesses and individuals are doing so all the time.

Yet all of this is barely the beginning. As even more-powerful PCs and communications capabilities become more widely affordable, large segments of the world's population will be able to meet one another and exchange information electronically in cyberspace.

MEET ME IN CYBERIA? Before the end of the next decade, high-school students from the U.S., Europe, China, Russia, and maybe even Afghanistan will be able to meet in cyberspace through computer communications. Businesses will routinely rely on international messaging and conferencing systems for coordinating their sales forces, for communicating with customers and suppliers, and for monitoring market trends.

In fact, the basic pieces are already in place for a major explosion in cyberspace use. The astonishing speed with which digital facsimile transmission has been accepted and has transformed the way business is done is an indicator of how rapidly things can happen once the time is right.

What's more, the stunning success of fax has very likely prepared the way for the acceptance of modem-based computer communications as well. Fax—by working its way into the local drugstore, accountant's office, and lumberyard—has awakened even small businesses to the potential of electronic communications.

With continued advances in modem technology making transmission speeds of 2,400 bits per second or faster readily affordable, signs of a major acceleration in use are mounting. And, although ordinary phone lines are limited by the 19.2-kilobit-per-second (uncompressed) upper limit of RS-232 communications today, the phone companies' promised Integrated Services Digital Network (ISDN) and eventual fiber-optic local connections are likely to raise those limits substantially in the future.

■ WILLIAM F. ZACHMANN

FORA FORAYS But even the current technology is enough to create entire communities in various parts of cyberspace. PC MagNet is typical of these. There, not only do more than 50,000 PC Magazine

readers, writers, and editors exchange ideas, information, and opinions about industry topics, but they also discuss an enormous range of "extracurricular" topics such as music, philosophy, and poli-

tics. CompuServe forums (or "fora" as they are called in cyberspace) cover as wide a range of topics as there are people willing to participate in them. Whether your interest is fine wines, race cars, religion, investments, comic books, literature, the law, or scuba diving, there is a forum for you. And if you are interested in an area for which a forum doesn't exist, you can probably convince CompuServe to set one up, provided there are enough other folks willing to use it.

If you're a cyberspace traveler already, you know what I'm talking about. If you're not, then you are missing out on a terrific opportunity to participate in the early development of the information age.

TURBS: THE SEQUEL Modern electronic-information services are creating literally a new dimension of society. The communities that form in services like PC MagNet and CompuServe are just as much

■ Whether your interest is race cars or religion, there's a CompuServe forum for you.

a part of the future evolution of modern society as were the movements from the farms to the cities early in this century or the development of the suburbs after World War II. The difference is just that the newer communities are developing in the cyberspace of digital electronic communications rather than in the physical space of real estate.

The exciting thing about this latest migration, however, is that anybody can participate without leaving the office (or home). All that is required for a modern cyberspace traveler is a personal computer with a modem. And, unlike Gibson's cyberspace world or Castañeda's world of the shaman, the possibilities of mortal danger are extremely small. The risks one takes are the more ordinary social risks of encountering a new group of people in a most novel and unusual manner!

Discover the newest technology in high-speed memory!

New Attraction™ Memory Is Not Expensive Anymore

- Provides these memory modes - Conventional Memory - from zero K to 640K
- AT Extended Memory - up to the 16MB limit
- LIM/EMS 4.0 Expanded Memory - using our optional Charade™ emulation software
- For 286 and 386 computers.

4MB 32-Bit Memory Module for Compaq® Desktop 386/20, 386/20c and 386/25 computers.

- Adds up to 16MB of high-speed memory.
- Comes with Industry Leading chip level diagnostics.
- Available for immediate delivery.
- Full one-year warranty!

Compare the power, performance and price!

Our Products Speak for Themselves

Our products speak for themselves. Loud and clear, they say "quality, reliability and performance." For more than 20 years, Monolithic Systems Corporation has manufactured superior computer products for OEMs and corporate end-users. Our advanced memory boards, motherboards, and serial port expansion boards are designed to meet the exacting demands of power users. For products that say "quality," look to MSC.

JustRAM Memories

MSC supplies JustRAM memory boards from 1MB to 16MB per slot, builds custom memory subsystems with one gigabyte or more of DRAM, and also manufactures individual SIP and SIMM memory modules for a variety of standard microcomputers.

MicroFrame Motherboards

MSC MicroFrame motherboards are available with 16, 20 or 25MHz 80386 and 386SX processors, some with the added advantage of cache, and with up to 16MB of 32-bit RAM on board.

Connect I/O Boards

MSC's Connect series of intelligent serial port expansion boards adds four, eight or sixteen serial ports per board.

Systems integrators can put it all together using MSC's new line of enclosures as platforms for building high-performance systems.

MSC backs its products with some of the best warranties on the market: three years on motherboards, five years on memory boards and lifetime on memory modules.

With VM/386 Multitasking, Each DOS Stands Alone

Unlike multitasking environments which force each task to share one copy of DOS, VM/386™ is the only 386 control program which provides complete task independence. With our virtual machine architecture, designed specifically for the 80386 microprocessor, you can even crash and reboot an application—without affecting any of the others. Richard Eckhouse of IEEE Computer said “Unlike other such systems, VM/386 not only works well, but seems to be unbreakable.”

Each virtual machine is just like a stand-alone PC, complete with its own copy of PC-DOS or MS-DOS (the real thing, mind you, *not* an imitation). So each virtual machine in your multitasking environment gets its own terminate-and-stay-resident (TSR) programs, AUTOEXEC, and CONFIG files.

As Namir Clement Shammas said in our Byte review: “VM/386 provides you with excellent control

for adjusting the performance and operation of each virtual machine.”

VM/386 gives you other kinds of flexibility, too. You can set I/O privilege level and interrupt priorities so multiple devices can be run simultaneously and efficiently. You can adjust the amount of memory used by each application, including extended and expanded memory. VM/386 even eliminates “RAMcram,” because you load each application in its own virtual machine.

And, most importantly for anyone trying to control complicated systems, you can adjust time slices down to the milli-second level. Developers are using this feature to update virtual machine performance “on the fly.”

Another significant capability of VM/386 is the ability to run graphics and communications

programs full-time in the background. VM/386 supports MDA, Hercules, EGA, and

VGA. It runs Novell, 3COM, and IBM Token Ring networks, and micro-

to-mainframe communications.

Why wait for a “new” operating system, and its inevitable compatibility and “first-release” problems? With VM/386, it takes only a few minutes to set up a fully-configurable, DOS-compatible multitasking environment on your 386.

■ STEPHEN MANES

ANY DAY NOW: ENGINES OF THE FUTURE

There's nothing like buying a highly touted "platform for the future"—especially if the platform rusts out before the future arrives.

"I'm looking for a vehicle," Dad told the salesman at Hondler Motors. "What's the story on this one?" The Chivey Gorp that Dad was pointing to had the lowest sticker price in the place—and was still no bargain.

"Good transportation," the salesman said disdainfully. "All new this year, bumper to bumper."

Dad went over and opened the hood. "New? This is the same underpowered 88 cube engine you've had for years!"

"Look closer. It's actually a super 86. Extra valves," the salesman puffed. "Sixteen instead of eight."

"So that'll do what?" Dad snorted. "Make it go 56 mph instead of 55? And the body's narrower than it used to be. I could never get this fat butt of mine in."

"Easier to park." The salesman smirked. "But when you get down to it, you're absolutely right—the Gorp is not state of the art. Come take a look at our new line of Ill cars. Here's our Chive-a-lait Ill."

"Looks like one of last year's models—what was it, the Luger, the Daisy, the Spud Pistol?—only smaller," Dad jested.

"Downsizing is a reality we all have to live with," the salesman sniffed. "But this Ill car is different in every possible way."

My father rolled his eyes and cracked the hood. "This has the same lousy 286 motor that's been around for years."

BUILT-IN OPTIONS "But it's driving a whole new platform for the future. First, look at this sticker: lots of options are built

right in. Last year, a temperature gauge was an extra-cost option; this year it's standard. Last year we charged extra for the map light; this year it comes in every Ill we sell."

"Thrilling," Dad said impatiently.

"That's just the beginning." The salesman reached into the car and tugged at the steering wheel, which came right off. He held it up like a trophy. "Modularity. That's the vision. Every available option just snaps in. You can customize it exactly the way you want. If you change your mind, you can make adjustments in seconds. You don't need a wrench. You don't need a screwdriver."

"And neither do the guys who swipe parts," Dad retorted. "How often do I change steering wheels, anyway?"

"That's not our real selling point," said the salesman, unruffled. "This is." He opened a little flap on the rear deck.

"What is it?" Dad asked.

"The Macro Connection Link." The salesman beamed. "MCL. There's another socket up front and two more inside."

"What does it do?"

An MCL brochure magically appeared. "All the details are here. In the future there are going to be only two kinds of cars: those with MCL and those without it."

"But what's it for? What good is it?"

"I'm sure you realize that Generic Motors has one of the largest R and D operations in the free world. The MCL means your car is ready to hook up to any new development that comes out of the labs."

"Like what?"

"The only limit is imagination." He pointed to a picture of an impending head-on collision. The Chivey Ill had high-tech rays flashing out from it. "This is a special superconducting magnet that repels oncoming cars in the event of a collision. Without MCL, you'd never be able to add it to your car. With MCL, you'll just hook right into the new technology."

Dad whistled. "Now that really is something. How much does that cost?"

"Impressive, huh? My kid calls it Star Wars."

"How much?"

"Still in the labs. I'm afraid."

Dad frowned and looked down at the brochure. "What's this? Wings?"

The salesman beamed. "Imagine rush-hour traffic. Our Aero Ill module will take you from zero to 60 feet up in 20 seconds. But not with low-end models like the Gorp. It will only plug into the MCL."

"You're telling me this gutless 286 will be able to generate enough power to fly?"

■ STEPHEN MANES

"Well, that's not guaranteed. You might need one of our 386s for acceptable performance."

"But I could plug that in later on. It's modular, right?"

"I think you misunderstood. The engine is definitely not removable. That's why we suggest you consider the bigger models if you're thinking about something like the Aero down the road."

"Is this Aero thing available now?"

"It's in the experimental stage. But I suspect you'll be seeing it before the turn of the century."

"The turn of the century! That jalopy will have rusted through by then!"

"Not if you have our MCL-based ion-generation rust protector."

"What will that do?"

"It will bathe your car in an invisible shield of ions that will prevent rust before it even starts."

"How much will that cost me?"

"When we bring it to market, you can bet it'll be highly competitive."

"Look." Dad growled, "what can this MCL do for me right now, today?"

"It protects your investment in automotive technology from becoming obsolete."

"Speak English. What plugs into these MCL outlets, anyway?"

"There are dozens of MCL options. Radios. Car phones. Digital clocks. And with MCL, you can use them all at the same time without degrading performance!"

"I can get those on any car and they already work just fine all at once. Are these cheaper, or what?"

The salesman coughed. "I believe you'll find them fairly priced, considering their value."

"In other words, expensive."

The salesman gagged. "Uh, yes."

It was pretty much the same at the Kreutzer and Dorf showrooms. You could get the old low-end cars they'd been churn-

ing out for years, or "Cars of the Future" with something called "FICA."

As far as Dad could figure, FICA was just like MCL, except you could plug in the digital clock or radio, or even the spark plugs, from your old trade-in. But nobody was actually doing that, in part because dealers found it was tough to sell used cars with big holes in their dashboards, and in part because you had to get on a waiting list to order FICA cars—they weren't available just yet.

So Dad ended up with a car that looked exactly like his old clunker. The Chopstick is dependable and so cheap Dad could afford a hot 386 engine—after all, it came from Taiwan.

Dad doesn't seem to be real worried that his trade-in value will be affected by Cars of the Future. But he is a little concerned about rumors that standard equipment on next year's Chopstick will include a monster 486 under the hood.

Menus for WordPerfect

The Perfect Addition

If navigating the function key jungle of WordPerfect is more than you bargained for, let us suggest **The Perfect Addition**. With **The Perfect Addition**, you'll have easy access to WordPerfect commands from a pop-up, pull-down menu interface.

Powerful customization features let you tailor the menu to your needs; even add your own custom macros! Then execute them using familiar pull-down menus, highlighters, and shortcut keys. Or, if you prefer, use your Microsoft Mouse or compatible. Get more from WordPerfect versions 4.1 through 5.0 with **The Perfect Addition**. Ask your dealer or order direct today! **Just \$54.95** plus \$4.00 s/h.

The easy to use pop-up menu for WordPerfect. Features include a repeat key, a pop-up reference window for commands and macros, shortcut keys for easy selection, and selectable hot keys.

POWER TOOLS FOR THE THINKING CLASS.

You're paid to think.

Sure, you play many important roles for your company. But most important, it's the way you think that's taken you this far, this fast.

One way to get a little farther, a little faster, is to consider making the NEC PowerMate® 386/20 and PowerMate 2 part of your corporate climb. Because both help you do a faster, more thorough job of working and thinking.

The PowerMate 386/20 is the one for sophisticated users with advanced applications. It's got the muscle and speed (20/8 MHz) to work with all off-the-shelf 386 software, including Windows/386™, UNIX® and XENIX®. The power, storage and memory (up to 16 MB) to function as a file server. And add any one of a broad range of peripherals and you're ready to tackle

complex financial modeling, engineering or designing, as well.

The PowerMate 2 was born to accelerate your climb to the top. It's expandable. It's 80286-based and runs at 10/8 MHz. And it handles the day-to-day chores by delivering more than enough memory (up to 10.6 MB) and storage to breeze through spreadsheets, project management, even desktop publishing.

Naturally, both power tools are part of our complete family of compatible, top-quality PCs. All backed by a \$22 billion company.

To learn more about power tools for the thinking class, call us at 1-800-NEC-INFO. (in Canada, 1-800-343-4418). You'll be making a call that shows you've really done some thinking.

NEC

A Perfect Defense Doesn't Have To Cost Billions

From the man who wrote the book on data recovery comes the premier software defense against data loss. **Mace Gold** offers 17 programs to help safeguard your data and keep your hard disk running reliably and efficiently.

On guard with **Mace Gold** you have, foremost, **Mace Backup**, a fast, convenient, fail-safe way to save and restore hard disk data. **Remedy** stands in reserve, ready to find and automatically fix the inevitable weak spots on your disk before they can threaten valuable files. **POP**, our power-out protection software, can carry you past brown-outs, black-outs and keyboard lock-ups. And **Vaccine** stands as a final line of defense against "bombs," "viruses," and the odd "trojan horse."

No defense is perfect if it can't recover, and **Mace Gold** provides what you would expect, the best data recovery there is. **UnDelete** and **UnFormat** offer flawless recovery of deleted files and entire disks. **TextFix** and **dBFix** go beyond simple ASCII retrieval to automatically find and rebuild lost, corrupted or damaged word processing and dBase files without losing precious format information. And now

there's **MUSE**, a sector editor intelligent enough to teach you, and packed with enough recovery power to resurrect the "deadest" of disks.

Of course, the best defense is still a strong offense, and **Mace Gold** gives you just what you need to keep your system moving fast and efficiently. With fast disk caching in regular, extended or EMS memory, quick and reliable file consolidation with **UnFrag**, and directory sorting and squeezing, **Mace Gold** can minimize wear and tear on your disk—and your fighting spirit.

For all this, **PC World** awarded **Mace Gold** "Best Buy." This signifies an exceptional balance of features, performance, ease of use, and price when evaluated against the competition under everyday working conditions.

Add the benefit of having a company that specializes in recovering the unrecoverable working for you, and you'll never find yourself having to think the unthinkable about the safety of your precious files.

COVER STORY

80386

THE POWER AND THE GLORY

For price, versatility, and sheer power, the 80386 microprocessor, more than any other chip, fulfills today's expectations and leaves plenty of room for the demands of tomorrow. PC Magazine's editor-in-chief Bill Machrone explains the magazine's backing of the best microprocessor yet—and why there's no reason left to look elsewhere.

As you read this, let's join in a moment of silence for a dear, departed friend, gone before his time. It wasn't easy for the little guy, born, as he was, brain damaged. But he and millions of similarly afflicted brethren enriched our lives despite their tragic limitations. They nearly overcame the odds. But in the survival of the fittest, the inevitable happened. They were pushed aside—killed, as it were, by their own parent, Intel. Yes, the sad little 80286 never stood a chance.

Even as I write these words, however, thousands of 286-based machines are being purchased, many of them from the advertisements in this magazine. We've risked becoming tiresome as we repeat the litany: don't buy a 286-based machine.

Sure, the 286 did a lot of good computing for us. The original PC AT finally elevated the IBM standard into the realm of true 16-bit computing. It showed us what protected mode was all about. It proved that 8 bits were not enough for seemingly mundane I/O operations. It recalculated our spreadsheets in one-third the time the old XT's took. But that was then; this is now.

In last year's August issue, the cover read "Why You'll Never Buy Another 286." That epitaph, you may know, touched off a hue and cry from readers and vendors alike. Readers claimed that we were too blinded by performance and too eager to get them to spend big bucks. Vendors claimed that we were unrealistic, that 286 machines were their biggest sellers. We in turn responded that it was OK to buy 286 machines back when we didn't know any better, but now it was like throwing good money after bad.

FIRST NAIL DRIVES HOME One nail in the 286's coffin is the 80386SX. This past January, Intel made dramatic price cuts in the 386SX. The debates continue over why the chip maker actually made the cuts and the nature of the 386SX's real role in the market.

Some claim that sales of the 386SX were so bad that Intel had to resort to fire-sale prices. Others say it was time for Intel to go after Harris and AMD (the 80286 licensees) in a big way.

At the SX's original pricing, it couldn't have been a success. There just weren't enough reasons to turn away from the 286,

and it didn't lend itself to a new tier between the 286 and 386. But the SX's newly aggressive pricing is a success. Several compatibles vendors have already made plans to become 386-only manufacturers. The bottom-of-the-line machines will sport 386SX chips, with full 32-bit 386 machines at the high end.

PC Magazine columnist Will Zachmann calls 386SX chips "the castrati of computing," referring to the power of the 32-bit chip's being cooped up in a 16-bit package. In the market, however, it's working out a little differently. Whatever the reasons for the price cuts, the bottom line is that you can build a 16- or 20-MHz 386SX-based machine for essentially the same price as a 286-based machine. As the

Way back in 1987, editor Bill Machrone was already calling the 286 chip "brain damaged."

386SX price drops closer to that of the 286, precious few differences remain between a high-end 286 and a 386.

So why would you want a lesser, older chip? Yes, the 286 runs OS/2, but by the end of the year there'll be a 32-bit version of OS/2. Next year, Presentation Manager goes 32-bit. By then, OS/2 applications will be plentiful. And you'll be throwing rocks at your 286-based hardware because the benefits of running PM-based software on the 386 will immediately be apparent.

AN EARLY BIOPSY *PC Magazine* has been heralding the demise of the 80286 since my column in early 1988 ("80286 R.I.P.," January 26, 1988), but my unlove affair with the 80286 goes all the way back to summer 1987. At Microsoft's first

OS/2 Developer's Conference, when I called the 286 brain damaged, the description drew applause from most of the audience and apoplectic looks from the Microsoft table.

My comments simply reflected the hard reality that the 386 is a far better chip for both today's and tomorrow's computing. The examples I gave at the time still apply: the 286 has no inherent way to switch from protected mode back to real mode; instead, the switching must be done by external circuitry that actually resets the chip without losing the work currently in memory. The switch can also be made by the keyboard controller, itself a low-powered microprocessor that can be programmed to seize control of the 286 as it resets. This is a kludge—which, in engineering parlance, is no compliment. The 286 further limits you to running one real-mode (DOS) task or multiple protected-mode (OS/2) tasks.

The 386 would also seem to be infinitely better suited for today by allowing multiple DOS sessions in virtual 86 mode. In truth, virtual 86 mode has been difficult to harness by operating system designers, who want to deliver more than purely independent DOS machines running on one chip. Users want interprocess communications in the form of a shared file system, clipboard, and messaging. In some ways virtual 86 mode provides too much isolation and not enough centralized control. As a result, the leading 386-specific software programs—*Microsoft Windows/386* and *DESQview 386*—don't use it.

The 386 makes up for the difficulties of using virtual 86 mode by offering comprehensive memory-management capabilities that are utterly lacking in the 286. It allows fairly sophisticated remapping of memory: a major convenience in getting various drivers, network monitoring programs, and memory-resident programs out of the 640K that you want to use. Today's multitasking operating environments, in fact, rely heavily on the 386's memory management to work their magic. So do memory-mapped devices like the Weitek math coprocessor chip set.

Finally, for those of you who thought that the 286's 16MB address space was going to be enough, it isn't. Even if you don't have that much real memory in the system, the 386 has comprehensive virtual-memo-

THE 486: ALL THAT POWER WITH NO PLACE TO GO

You may wonder why *PC Magazine* has devoted all this space to 80386-based PCs when 80486-based PCs are just around the corner. After all, the rumor mill is buzzing over Intel's latest attempt to put a mainframe on a sliver of silicon—and has been since soon after the first 80386 was announced. Many of those rumors are pretty solid by now. But don't hold your breath.

What you might've heard is that Intel won't be shipping 486s until well into 1990, and PCs built around the new processor certainly won't be available before then. Less known, however, is that when these are available, most PC users won't be able to take advantage of, or even afford, the new generation of PCs.

THE 486'S PLUS SIDE The hottest rumor of all is the speed of the 486. If you think that a 25- or even 33-MHz 386-based PC is fast, think again. Word is that the 486 is designed to run as fast as 60 MHz, roughly twice the current maximum speeds that 386 processors can manage. There's more: because no instruction is expected to require more than one clock cycle for the 32-bit 486 to execute (a 386 ordinarily takes one to three), a 33-MHz 486-based PC will run the same program about three times as fast as a 33-MHz PC powered by a 386 processor.

The 80486 will also increase processing speed by including an on-chip static RAM cache; the 386 requires the external 82385 controller and separate static

RAM to accomplish the same thing. The 486's internal capability will improve performance by saving the time required to access off-chip RAM cache facilities.

And if you want even *more* speed, Intel is developing the N10 version of the 486. While the so-called RISC (reduced instruction set computer) version won't be PC-compatible, it will run three to seven times as fast as a standard 486 because it contains a smaller instruction set.

BUT HOW RELEVANT? With these capabilities, however, come the inevitable questions regarding the relevancy and practicality of the 80486. It's widely believed, for example, that the 486 will add the ability to simulate multiple 286 processors in protected mode, aiding in server-to-server network communications and running multiple servers on one PC. (The 386 can simulate multiple 8086 processors.) But realistically, who needs multiple 286s? Who needs a 60-MHz PC? Can a 60-MHz PC even be built?

Does any single PC user need a 60-MHz machine, let alone the N10 version? Sure, if you ask any CAD user, you'll get a quick thumbs up. And if you ask the staff of a desktop publishing or graphics art shop, struggling to keep on top of their bit-mapped image files, you'll find they want a 486; you can bet on it. The RISC version, too. But these are niche markets—not the general public of PC users—so the market for 486-based PCs will probably be small relative to the market for lesser processors.

It's a good thing, too, because 486-based PCs are going to be very expensive. They'll be expensive just because the processor itself will be. Intel is making a huge engineering investment in the 486, and the company will have to recoup its investment in the chip's price in order to balance the books.

But that's not all there is to it. The high cost of 486-based PCs will last for a long time because it won't be easy for the engineers that turn chips into PCs to build machines around the 486. Speed alone will make this expensive, and the cost of building PCs above 33 MHz is expected to go up geometrically. High-speed RAM that doesn't even exist yet will be needed, as will high-performance "glue" chips to hold the components of a PC together electronically.

Then there's the problem of EMI (electromagnetic interference). As processor speeds go up, EMI can cause cross-circuit interference and levels of radio signal interference that, if unchecked, can wreak havoc in office as well as home environments. EMI at these levels is difficult to control.

The 486 will undoubtedly bring us an expensive and interesting new generation of PCs. The new machines, when they arrive, will soon become the required machines for file server applications and some important niche markets. And you can bet they'll be the darlings of the PC power user set. But if you're like most users, you'll probably not need one for a long, long while.—John Dickinson

ry capabilities. Virtual memory allows the 386 to use data not currently stored in memory as though it were. It's only a matter of time before operating system designers press virtual memory into service.

INSTANT WINNER The 386 was an instant winner for a couple of good reasons. One was speed. The chip was born at 16

MHz, with 20 and 25 MHz in the queue and a clear plan to get to 33 MHz. Another of its winning ways is that it was designed with OS/2 as well as DOS 2 in mind. Other than backward compatibility with the 8086, the 80286 was designed without much regard for the software that would be written for it. The 386 design, conversely, came about with considerable input from

Microsoft and other major developers.

The 386 was also designed as a rejoinder to the popularity of Motorola's 68000 line of microprocessors. Intel engineers had gotten tired of hearing about the 68000's flat address space (with which a program can directly address data anywhere in memory) and the limitations of the 286's segmented architecture.

For many of us, it seems like only yesterday that the IBM PC's ROM-based operating system, 16K RAM, and cassette storage were the accepted route to personal computing. For others, it's memories of 80-column punched cards and long, long lines at the batch processor. No matter when you entered the fast-moving world of information processing, chances are you'll remember at least a few items in this collection of historical milestones.

Segments actually make it easier to write some kinds of programs, such as multiuser operating systems. But the 64K segment size of the 286 was a woeful anachronism. While the 386 also has segments, these can be just as big as you like—a clear case of having your cake and eating it, too.

Of course, it's taken time for the operating systems vendors to harness the 386's inherent power. We reviewed five multitasking operating environments for the 386 in our February 28, 1989, issue and found them to be at various points along the path to nirvana. OS/2-386 is due out at the end of this year, and it will materially change the direction of software development on the desktop—far more than OS/2 has done to date.

How safe is it to buy a 386 machine? What of the compatibility issues, the memory architecture, the speed ratings, the chances for obsolescence? These are all worthwhile concerns, but from a compatibility standpoint, the 386 market has turned out to be somewhat of a yawner. Writing a BIOS has metamorphosed from black art to science, even though the number of practitioners remains small. Likewise, only a small handful of companies build the logic chips that govern the timing and operation of the motherboard. The result? Fairly strict adherence to the conventions first set forth in the PC AT. In fact, virtually all the machines reviewed here are more compatible than the early 12-MHz 286 machines.

PLENTY ROOM TO GROW Even with all this conformity, the manufacturers have found plenty of room for innovation and differentiation. Memory architectures, caches, disk controllers, and expansion schemes together ensure ample freedom of expression. While the low-end machines economize by offering no cache memory, the innovators are always angling for the hottest performance with new architectures. Some use ultrafast static RAM. Others use fancy prefetch devices, such as Intel's 82385 cache controller chip. Still others come up with proprietary memory control and caching hardware.

All these measures have a direct effect on performance; fortunately, they do not affect compatibility. But the design deci-

sions a manufacturer makes do affect your purchases. A 386 using industry-standard SIMMs (single in-line memory modules) will be much cheaper to upgrade than one that uses the manufacturer's proprietary expansion boards or daughtercards. By the same token, a proprietary disk interface like Compaq's will cost you more if you decide to add or upgrade a hard disk.

The single most important reason to avoid 286 machines is that they have no future. Intel might have built a multitiered product line in which the 286 had an ongoing, vital role, but the company didn't. The 286 licensees are reduced to making the chip a little faster and a little cheaper, both of which will ensure it a place in low-

**We are
sure that the
386 is the
only intelligent
choice
for corporate
computing.**

end computing for the foreseeable future. But OS/2 is the first and last program written for the 286. Once OS/2-386 is introduced, all software development for the 286 will effectively have ceased.

So if you want to buy a cheap machine to run DOS today and don't give a hoot about what you'll want tomorrow, fine. Buy a 286 machine, especially if you are going to run it at 10 or 12 MHz. But don't waste your words trying to convince us that the 286 has a bright and glorious future or, worse, that it's a good investment. We've heard all the arguments and are only more sure than ever that the 386 is the only intelligent choice for corporate computing and that even the 486 won't soon unseat it. Will *PC Magazine* endorse over the 486? Doubtless. But will the 486 have any significant impact on mainstream

desktop computing in the next 2 or 3 years? Doubtful.

This issue, however, isn't about the 286 or the 486; it's a celebration of the 386. Our surveys tell us that 16 percent of our nearly 750,000 primary readers are using 386 machines at work. More than 8 percent are using 386s at home. Major companies have already decreed that no more 286 machines will be purchased. In our capital budgeting for *PC Magazine*, we've rejected all requests for 286 machines, except laptops.

That's a trend. That's the future staring you right in the face. We could have reflected the status quo and done a knockout issue on the infinite varieties of 286 machines on the market. Indeed, we've already compared and will look again at 16- and 20-MHz 286 boxes. We've got to be useful, and as long as people are wasting their money on such machines, they might as well get the most for it.

HOW MANY MACHINES? Meanwhile, the 386 market is far larger than you might have suspected. As you know from the cover of this issue, our tireless editors found 104 computers from 58 companies and subjected them to the usual rigorous battery of tests in PC Labs. Along the way we eliminated vendors who are original equipment manufacturers (OEMs) only or who sell only to value-added resellers (VARs).

A number of the companies we contacted (Austin and Data General among them) chose not to participate. A few, such as Kaypro, Maxar, and Unisys, agreed to participate but somehow managed not to ship us a machine within the 2-month window we had allotted. Unix-only machines such as those from Sun Microsystems (which run DOS within a Unix environment) are not included. And one notable company, Epson, does not yet offer a 386 computer. We're confident, now that the dust has settled, that virtually every machine that might pique your interest is represented here.

We categorized the machines according to your buying habits, with a degree of common sense in the synergy between speed and configuration. Each company was asked to submit a desktop machine in each of three speeds: 16, 20, and 25 MHz.

New UL 1449 Guide to Surge Protection Provides First Objective Standards

UL 1449: The New Watchdog

Until recently, there was no standard to go by in selecting a surge protector. Consumers had to make choices based on little-understood technical specifications that had nothing to do with the performance of a surge protector.

Then, in 1988, the famed Underwriters Laboratories, Inc. (UL) conducted independent tests of leading surge protectors and developed a new standard called UL 1449. The New UL 1449 Standard objectively measures the amount of voltage that can pass through a surge protector after clamping has occurred.

Power Surges Are Common: Earlier studies by the Institute of Electrical and Electronics Engineers (IEEE) have shown that the average office or household receives approximately 100 power surges or "spikes" each month, many as high as 1,000 volts.

Such surges occur whenever power output is "dirty," or not constant. Common sources of power surges in the AC power supply result from nearby lightning strikes, utility companies changing power loads, on-off switching of inductive motors and self-switching power supplies such as air conditioners, refrigerators and dishwashers. If your electronic equipment remains unprotected, these surges can cause irreparable damage to expensive electronics such as computers, TV's, VCR's, stereos and FAX machines. In computers, they can also cause disruption or total loss of valuable data.

Surge protectors act by "clamping" the moment a surge occurs, thereby controlling the amount of voltage that will pass through to your expensive systems or appliances.

UL 1449 and You: Choosing the Right Surge Protector: UL 1449 is a mandatory test for all surge protector manufacturers desiring the UL 1449 listing. A UL 1449 rating of 400 Volts Peak or less assures consumers that the final voltage going through their equipment is at a safe, clean level. Therefore, a surge protector with a UL 1449 rating of 400 Volts Peak offers superior protection to that of another surge protector with a UL 1449 rating of 500 Volts Peak or more.

Protection Features to Consider When Buying Or Specifying Surge Protectors:

- UL 1449 "Most Protection: Rating of no more than 400 Volts Peak."
- Hot to Neutral, Hot to Ground and Neutral to Ground Protection (which protects all incoming lines to your equipment).
- EMI/RFI Filtering—for protection against many electrical and radio frequency interferences.
- Telephone/FAX/Modem Protection—for protection of today's highly sophisticated electronic equipment which requires use of a standard telephone line.
- Manufacturer's Warranty.
- UL, UL 1449 & CSA Listed.

- UL 497A Listed for Protectors of Communication Circuits.

Personal Features to Consider:

- Power cord—for easy access, installation and comfort.
- Remote Switch—for convenient desktop ON/OFF switching.
- Manual ON/OFF switch—for easy control of up to six individual peripheral devices such as computer, printer, copier, calculator, stereo and FAX machines.
- Positive Operation LED (indicator) lights—for seeing at a glance that surge protection is operating at a safe, clean level.
- Phone/FAX Protection—to protect against equipment breakdown and business downtime.

All Curtis Surge Protectors meet the "Most Protection" rating of 400 Volts Peak or less. The Curtis Command Center Plus, a surge protector that controls and protects up to five electronic components received a UL 1449 rating of 330 Volts Peak, the best rating available.

Curtis products are available at computer, retail and office products stores nationally and in Canada. For further information on surge protectors and Curtis products, send for a FREE BROCHURE: "Surge protection and the New UL 1449 Standard." Write Curtis Manufacturing Company, Inc., 30 Fitzgerald Drive, Jaffrey, NH, 03452 or call 603-532-4123, EXT. 149, without obligation.

MOST PROTECTION

330	400	500	600	800	1000	1200	1500	2000	2500	3000	4000	5000	6000	VOLTS PEAK
-----	-----	-----	-----	-----	------	------	------	------	------	------	------	------	------	------------

LEAST PROTECTION

Underwriters Laboratories has developed this chart to show the maximum voltage that can pass through a surge suppressor after clamping has occurred.

All Curtis Surge Protectors meet the "Most Protection" rating of 400 Volts Peak or less.

Benchmark Tests: PCs from Past to Present

The trip down processor lane doesn't often lead one to nostalgic reveries. In the olden days, we waited an exasperating 159.29 seconds for the original PC to run through our Floating-Point Calculation benchmark test; in that time you could call the local deli for a take-out lunch. Nowadays the fastest 25-MHz 386 we've gotten our hands on runs the floating-point test in about 8 seconds, and in that time you'd be hard-pressed to do more than pick up the phone and dial. We are on the eve of the emergence of 33-MHz 386s, however, and soon even dialing the phone will be too ambitious a project to undertake while you run PC Labs' benchmark test. How long before you'll have the result in the time it takes you to press Enter? That could be sooner than you think, judging from the momentum of 8 years of processor evolution.

These charts show the speeds of selected machines tested for previous PC Magazine issues, along with the performance of 80386-based machines reviewed in the present issue.

The **Instruction Mix** benchmark test measures the time it takes to execute a selected series of processor-intensive tasks. The test program uses the instruction code specific to the processor of the computer tested (8086, 80286, or 80386). These instructions are a subset of the total processor instruction set.

The **Floating-Point Calculation** benchmark test measures processor speed by looping through a series of floating-point calculations, including multiplication, division, exponentiation, and logarithmic and trigonometric functions. The benchmark program uses the floating-point library included with Microsoft C Compiler 4.0.

Performance Times
(Times given in seconds)

Relative Times
(8-MHz IBM PC AT = 100)

	Instruction Mix	Floating-Point Calculation
IBM PC (8086)	32.57	159.29
IBM PC-XT (8086)	32.57	159.29
6-MHz IBM PC AT (80286)	12.25	47.86
IBM PC-XT Model 286 (80286)	9.61	38.06
8-MHz IBM PC AT (80286)	8.96	35.60
Compaq Deskpro 386S (80386SX)	4.56	17.36
16-MHz 386 (slowest machine tested)	4.83	17.33
16-MHz 386 (fastest machine tested)	3.48	12.65
20-MHz 386 (slowest machine tested)	3.57	13.71
20-MHz 386 (fastest machine tested)	2.76	10.10
25-MHz 386 (slowest machine tested)	2.69	11.61
25-MHz 386 (fastest machine tested)	2.20	8.02

OS/2

UNIX is a registered trademark of AT&T. All other products or services mentioned are identified by the trademarks of their respective organizations.

ver give you nder the Sun.

You're looking at a total eclipse of the moon.

Namely, the Sun386i™ workstation. Whatever OS/2 does, the Sun386i with UNIX® does better.

Which is not a pie-in-the-sky promise, but a down-to-earth fact.

While the OS/2 operating system limits your network horizons primarily to fellow PCs, the UNIX operating system on the Sun386i opens them to the world.

Mainframes, minis and personal computers of every shape and size.

So not only can you save all the IBMs, DEC's and Apples you've ever bought, you can effectively tie them all together right on your desk.

And if that's not enough to make you thank your lucky stars, there's this:

You don't have to give up one bit of DOS.

In fact, you can make more out of it.

Whereas with OS/2, you can run just one DOS program at a time. With the Sun386i's multitasking, you can run all sorts of DOS and UNIX programs at the same time.

Say you're working on currency trading figures under UNIX, you can update your Lotus® 1-2-3® spreadsheet under

DOS. Make a Harvard Graphics™ slide show under DOS. Cut and paste results of all three into a sophisticated publishing package under UNIX. And E-mail it to the coast.

Simultaneously.

Far out, you say?

Not really. Well within reach.

Because you can forget the UNIX hieroglyphics of yesteryear. The Sun386i, with its point-and-click interface and Hypertext help system, is easier to use than most any personal computer.

And it'll no longer take you a sidereal year to figure out how to plug into your corporate network. In this solar system, it's a 30-minute job.

After all, the Sun386i is just part of Sun's concept of Open Computing. A corporate-wide universe of truly distributed computing based on industry standards. Something out of sight for OS/2.

Which just goes to show you.

Once you look at the moon, you'll see how much the Sun really shines.

To find out more, phone 1-800-223-6736. In California 1-800-322-6736.

Systems for Open Computing.™

We weren't looking for any 33-MHz reality stretchers. We asked that the 16-MHz machines be outfitted with 2MB of RAM and a 40- to 70MB hard disk. We requested that the 20-MHz machines come with 2MB of RAM but with a 60- to 120MB hard disk. The 25-MHz machines were to have 4MB RAM and hard disks with capacities of 100MB or more. The reviews and the features table are presented alphabetically by company (within each review, the machines are discussed in order of clock speed). Benchmark tests are grouped by rated clock speed.

We didn't cover 386 portables in this issue because of the all-but-overwhelming number of desktop machines. You can count on coverage of the 386 portables in future issues. The 386SX got off to a slow, uncertain start because Intel had priced the chip too high. That's reflected in the small number of SX machines available for review in this issue (see the sidebar "Jump Start for the 386SX"). We have every reason to believe, however, that the future is bright for the SX.

This issue, overall, contains an enormous amount of information about the fastest-growing segment of the market. We couldn't sort it in all the ways that might be useful to you, but you can sift through the feature table, benchmark tests, reviews, sidebars, and accompanying articles to achieve your objectives. There's a lot to consider—such factors as speed, memory architecture, desktop footprint versus tower design, the number of expansion slots, type of vendor, price, and so on. Don't miss John Dickinson's sidebar on the 486: what it offers and why it won't obsolete 386 machines. We also test a few new disk-controller technologies from VIPC and SPT. The differences are startling.

Finally, there are the Editor's Choices. In each category we've selected machines that we would (and will!) spend our own money on. You may not agree with our choices; that's your privilege. Use them as a point of departure, and then consider all the variables upon which you'll base the computing decisions that will take you into the 1990s.—Bill Machrone

Bill Machrone is editor-in-chief and publisher of PC Magazine.

ACER TECHNOLOGIES CORP.

ACER 1100/16
ACER 1100/20
ACER 1100/25

Not everyone can afford to pay a computer consultant high hourly fees to make system recommendations. Here's a tip: many consultants and value-added resellers often recommend Acer Technologies computers. The Acer 16-, 20-, and 25-MHz 386s are neither the least expensive nor the fastest in their respective classes. But their high level of compatibility, combined with Acer's wide distribution network and strong service policy, make them highly reliable commodities.

All units in the Acer 386 line are desktop models: the 1100/16 is base-priced at \$3,195; the 1100/20, \$3,945; and the flagship 1100/25, \$6,295. The minimum configuration for each includes 2MB of RAM, two serial ports and one parallel port, a 1.2MB 5¼-inch floppy disk drive, and a floppy/hard disk controller. Monitor, video card, and hard disk are not included.

Each Acer machine uses shadow RAM technology to quicken BIOS and video performance, and all three set the system bus speed for expansion cards at a conser-

The Acer machines' exteriors are similar, including a front-panel reset switch and three exposed half-height bays. The main difference is that in the Acer 1100/25, the I/O connectors are to the left of the slot openings, as these ports are built into the motherboard.

vative 8 MHz. The motherboards are Acer-designed and manufactured; the chips are Award BIOS.

The Acer 386 power supplies have five device connectors and a switched outlet. The 16- and 20-MHz models use a 200-watt Astec power supply; the 25-MHz version comes with a more generous 230-watt unit from Delta. Each machine can hold five half-height storage devices, with three exposed for removable media.

The units' exteriors are fairly similar, including a reset switch on the front. The only difference among them is that the serial and parallel port connectors are positioned to the left of the expansion slot openings on the 25-MHz machine; these ports are built directly into the motherboard.

All the systems come with a fine, Acer-made Enhanced-style keyboard: it has a light, clicky feel and an 8-foot cord. DOS and GW-BASIC are also standard with these machines. Other bonuses include Microsoft Windows, an Acer-manufactured serial-port mouse, and an extended-memory-manager program.

ACER 1100/16 The 16-MHz Acer 1100/16 is a two-wait-state machine with 1:1 memory interleaving. Going beyond the \$3,195 base price, for \$4,600 you can get the unit configured with Acer's monochrome card and analog monitor, as well as a 70MB MiniScribe hard disk. Substituting Acer's VGA monitor ups the price to \$5,305. Our test configuration included a Western Digital ST-506 drive controller, VGA, 70MB hard disk, and 4MB of RAM for a list price of \$6,230.

This 16-MHz unit (which can also run at 4.77, 6, or 8 MHz) uses 100-nanosecond DRAM TTL memory chips. You can put up to 4MB of 32-bit memory on the motherboard and up to 16MB more on a proprietary memory expansion card that you can install in the single 32-bit expansion slot. Of course, current versions of DOS and OS/2 support only up to 16MB of RAM.

Besides the 32-bit slot, you get one 8-bit slot and six 16-bit slots. You don't get any memory caching on this machine (or on its 20-MHz sibling), but the 1:1 interleaving helped it score well on PC Labs' benchmark tests.

ACER 1100/20 If you like the 1100/16 but want 20-MHz performance, the Acer 1100/20 offers the same options as the 16-MHz machine. Our test machine came with 4MB RAM, a Micropolis 159MB hard drive, and an 80387 coprocessor.

The 1100/20 has the same Acer-made motherboard as the 16-MHz unit, the same available slots, and the same memory configuration options. Where the 1100/20 surpasses its 16-MHz brother is in its speedier processor (of course), its use of 80-nano-second memory chips, and its ability to run at zero wait states. Even without cache memory, the 20-MHz machine (which can also be set to run at 4.77, 6, and 8 MHz) tested in the upper half of the 20-MHz group. The DTC ESDI hard disk controller

and RLL-coded hard disk helped it perform especially well on the large-record DOS File Access benchmark test.

ACER 1100/25 The 1100/25 is a competitively priced system: the test configuration, which included 4MB of RAM, a 159MB hard disk, and a VGA monitor, sells for \$10,017. If you're content with only 2MB of RAM, a 70MB hard disk and a VGA color monitor, the price drops to \$8,955; substituting a monochrome monitor in the same configuration lowers the price even further, to \$8,250.

Although the motherboard on the top-of-the-line 1100/25 is also Acer-made, it is not identical to the ones found on its slower siblings. Besides the built-in parallel and

serial ports, this board houses 32K of cache memory in the form of an Intel 82385 cache controller chip. The 25-MHz processor can be throttled down to 6 or 8 MHz; you can also keep the machine running at zero wait states.

This motherboard will accept up to 8MB of 80-ns. 32-bit RAM in SIMM packs. Each of the two 32-bit expansion slots can take a 16MB memory expansion card, bringing the total possible system memory to 40MB. While there are nine slots in all, including six 16-bit and one 8-bit slots, only eight are available for use

LOWE'S PHOTOGRAPHY SERVICE

■ 80386 DESKTOP PCs

because of the placement of a 32-bit memory slot directly behind one of the 16-bit slots. That's not a problem: no one running DOS or OS/2 on this system will need the second 32-bit slot, at least for now.

Since Acer also uses a fully arbitrated bus on this machine, in the future it may be possible to install a second board with its own processor in the additional 32-bit slot.

The 1100/25 scored above the mean on all of the processor and memory speed tests. The same Micropolis 159MB hard disk and DTC ESDI controller combination that worked so well on the 20-MHz machine, however, was not as impressive in the 1100/25; the system lost out to other vendors' hotter drives in the DOS File Access benchmark tests.

Acer's standard 1-year parts-and-labor warranty means you get on-site service by TRW (one of the largest computer hardware repair services) for the first 4 months, and depot service either at TRW service sites or at Acer itself (and soon at more than 200 dealer and distributor sites) for the remaining 8 months. This strong support network, combined with quality performance and reliability, makes the Acer machines very good bets. —Bruce Brown

ADVANCED LOGIC RESEARCH INC. ALR FLEXCACHE 20386DT ALR FLEXCACHE 25386

Advanced Logic Research knows that everyone associates three initial letters with reliable business computers. The company simply wants you to stop thinking "IBM" and start thinking "ALR."

ALR's FlexCache 25386 has already established itself among the fastest and sturdiest computers you can buy—at a price much lower than the computers sold by the company that uses those other three initials. The FlexCache 25386 runs its processor at 25.3 MHz—a trivial amount higher than Intel's rated speed, and one reason that the benchmark test results look so impressive. But there's more than a slightly hyperthyroid clock crystal that makes the FlexCache stand out from much of the competition.

The ALR FlexCache 25386 is distinguished not only by its speed but by its ideal network-server design: the absence of reset buttons on the case and easy access to power-off switches help avoid accidental system shutdowns.

The FlexCache 25386 is one of the few computers explicitly designed more as a network server than as a personal computer. You won't find a reset switch anywhere on this machine's tower case. That means that you or your office mates won't be able to disrupt the whole office by accidentally bumping up against that switch while everyone else is accessing the network. You won't even find it easy to switch the machine off. ALR's case makes you open a knurled knob, lift up a door, and twist your hand in Houdini-like contortions before you can reach that big red switch.

LITTLE STRIPPING DOWN ALR, much like IBM but unlike many computer vendors, doesn't expect you to start with a stripped-down 25-MHz machine and only later add niceties like a hard disk and a video card when you discover that one floppy disk drive and a speaker aren't enough for serious computing.

When you pay \$9,499 for the FlexCache 25386 in its base configuration, you get a quiet 150MB ESDI hard disk made by CDC and hooked up to a Western Digital controller. You also get a hefty 4MB RAM, a 1.2MB floppy disk drive, ALR's 16-bit VGA card based on the Paradise chip set, and a serial and parallel port. If

you want DOS, your dealer will have to sell you a different computer.

ALR gives you a keyboard with an excellent responsive feel—but also with that infuriating half-size backspace inflicted on early AT buyers. A switch on the back lets you swap the locations of the Ctrl and CapsLock keys. A second switch turns the keyboard from a standard AT keyboard into an XT keyboard.

The company's tower case has heavy black vertical fins that make it look like one of Darth Vader's favorite pets. It has open bays for two 5¼-inch half-height devices and one 3½-inch drive. You can also install two full-height internal drives with no access to the front panel. Although this arrangement lets you install two floppy disk drives and a \$1,890 150MB tape

CIRCLE 409 ON READER SERVICE CARD

In Short: ALR's 20- and 25-MHz systems offer sturdiness and speed—plus competitive prices. The 20-MHz model includes such features as 32K of cache RAM and a 120MB ESDI drive to help maintain speed. The 25-MHz model, designed more as a network server than as a personal computer, runs its processor at 25.3 MHz—slightly higher than Intel's rated speed, and one reason that the benchmarks look so impressive.

Paradise.

It's also the PC graphics card used by more computer manufacturers than any other.

Western Digital Imaging/Paradise 800 E. Middlefield, Mountain View, CA 94043, 415-960-3360/outside CA 800-356-5787

CIRCLE 362 ON READER SERVICE CARD

drive, it still seems needlessly restrictive. Another open 5¼-inch bay would let you add a CD-ROM drive or optical drive. And the cabinet seems to have plenty of space for adding more 3½-inch drives, but there's no way to access that space. Even if you had drive bays for other devices, the 200-watt Astec power supply comes with only four connectors.

ALR's homegrown motherboard holds one bank of 60-nanosecond 32-bit RAM, currently amounting to 1MB in the form of 256-kilobit chips; future models will have 4MB using 1-megabit chips. One of the expansion slots holds a 32-bit memory card with 3MB of 80-ns. RAM; a future model will hold 4- to 12MB. Of the remaining slots, six are 16-bit and one, occupied by a combination serial/parallel/floppy disk drive controller card, is 8-bit. The 25386 uses 64K of cache memory controlled by ALR's proprietary emulation of the Intel 82385 cache controller. You can install a Weitek coprocessor in addition to an 80387.

SMOOTH OPERATION PC Labs tested the \$9,499 base configuration of the FlexCache 25386, with the addition of a \$225 1.44MB floppy disk drive and a Mitsubishi VGA monitor that you can't buy from ALR. Once the keyboard switch was correctly set (it arrived set for the XT option), everything about the machine worked smoothly, quietly, and extremely quickly.

In contrast with the FlexCache 25386, the 20-MHz FlexCache 20386DT desktop machine seems almost ho-hum—although a few months ago any 20-MHz machine would have made most users gasp. The test results place it high among the faster 20-MHz machines. The stripped-down \$2,695 base configuration of the 20-MHz model comes with 1MB of 80-ns. RAM, a 1.2MB floppy disk drive, a serial and a parallel port, and the same excellent keyboard as the 25-MHz machine. PC Labs tested a \$6,884 model with 2MB of RAM (all on the motherboard), a 120MB ESDI drive, ALR's 16-bit VGA card, and a Mitsubishi VGA monitor.

The 20-MHz model uses the Intel cache controller and 32K of cache RAM; it accepts 8MB of RAM in the two proprietary slots that combine to hold the optional 32-

bit memory card. Of the remaining slots, two are 8-bit, four 16-bit. You can install five half-height devices, but you get front-panel access to only two.

By the time you read this, ALR will ship all its machines with a copy of the *Super PC-Kwik* disk cache. Combine that with ALR's swift and silent CDC disk drives, and you have a system that's network-safe at any speed.

—Edward Mendelson

ALTEC TECHNOLOGY CORP.

ALTEC ZIP-386/16
ALTEC ZIP-386/20

When asked why anyone should buy its 386-based PCs, the folks at Altec answer, "Because we use brand-name parts." A look inside the company's ZIP-386 machines proves the point: components by such well-known companies as Micronics, Seagate, and Western Digital fill Altec's boxes.

Budget considerations may also lead you to the Los Angeles-based clone vendor. Although not the lowest we've seen, Altec's prices are reasonable enough to satisfy all but the most bargain-hungry shoppers. For a ZIP-386/16 base system with 1MB RAM, one floppy disk drive, a parallel port, a serial port, and a keyboard, you'll spend \$1,595. For a similarly configured ZIP-386/20, you'll pay \$250 more.

Despite their names, Altec's 386s

didn't exactly zip through our benchmark tests. Then again, they didn't crawl. The ZIP-386/20 performed slightly better in comparison with the other 20-MHz machines in our roundup than the ZIP-386/16 did against its peers.

STRATEGIC DECISIONS At the core of Altec's brand-name strategy lie mother- and daughterboards made by Micronics. The AT-size motherboard contains the 386 chip and an 80287 coprocessor slot (an adapter is required for the 80387), but no memory. You'll have to give up the machine's only 32-bit slot for the Micronics memory board, which uses 80-nanosecond static-column TTL chips.

Design connoisseurs may snicker at the board's chips—half are soldered, half are slotted—but they get the job done. If you want more than the standard 1MB RAM, you can add an additional megabyte to the board (at press time Altec was charging approximately \$400 per megabyte) or buy piggyback boards with 2-, 4-, or 8MB of memory. A \$1,400 replacement motherboard with 4MB of RAM is also available.

System speed is helped in that the computers' video and system BIOS ROM are loaded into 384K of shadow RAM. Both machines operate only with zero wait states, with a steady 8-MHz bus for the ZIP-386/16 and a fixed 10-MHz bus for the ZIP-386/20. With software, you can slow the clock speed of either machine to 6 or 8 MHz.

Both ZIP-386s have eight expansion slots: two 8-bit, five 16-bit, and the occu-

The Altec ZIP-386/16 and ZIP-386/20 (in the lower case) operate with zero wait states. The bus speed is fixed at 8 MHz for the 386/16 and at 10 MHz for the 386/20, but their clock speeds can be adjusted to 6 or 8 MHz.

"FORGIVE ME, FOR I HAVE
LOST THE FILES. AGAIN!"

The devil made you do it. That is, MS-DOS® made you do it. The commands were obscure. The file names made no sense. You couldn't even find the directory, much less the subdirectory. And so, another talk with the man upstairs.

SOFTBREEZE® CHANGES THINGS FOR GOOD.

Introducing SoftBreeze,™ the fastest way to make your operating environment intelligible.

With SoftBreeze, you use on-screen menus and plain English language to manage your files and disk logically. So you don't have to memorize DOS commands.

And you can use 48 characters to name a file. So it's easy to sort, locate, retrieve, and view files. Not to mention copy, delete, back up, and print them.

SoftBreeze offers you multitasking and "cut and paste" features, too. Which means you can access all of your applications quickly. And transfer information efficiently.

AN ANSWER TO THE PC MANAGER'S PRAYERS.

For the PC manager, SoftBreeze is a breeze. Your users no longer must endure an eternity of training. And you don't have to answer endless calls for help.

The program also installs automatically, and is fully compatible within networked architectures, even LANs.

What's more, SoftBreeze uses less than 30K RAM, so it doesn't waste memory needed to run other programs. Which enhances the utility of your 512K-1MB PCs.

And finally, you can easily customize individual environments and use powerful diagnostic tools to find and solve problems quickly. Control at last.

**Soft
Breeze™**
User Interface

We put the *personal* back in PC.

ABSOLUTION ABSOLUTELY GUARANTEED.

For a limited time only, you can get SoftBreeze for just \$129 (\$169 after June 30). No other user interface offers so many features, uses such little memory, and is this affordable. In fact, you can try the package for 30 days. If you're not completely satisfied, your money will be refunded in full.

The option is yours. Pay MS-DOS penance forever, or pay for SoftBreeze today.

In Short: Altec Technology Corp. markets two ZIP-386s, a 16-MHz and a 20-MHz model. Although they aren't the fastest or the cheapest on the market, they are solid machines featuring brand-name parts. A good buy, they're clearly affordable.

placed 32-bit slot. And there are plenty of cutouts for D-connectors: five for 25-pin and three for 9-pin connectors.

The ZIP-386s have five half-height bays, three of which are open to the front. Getting to the other two is awkward because it requires emptying the front three bays.

MORE PROOF The \$2,995 16-MHz desktop system we tested was further proof of the company's commitment to brand-name components. Besides the Seagate 43MB hard disk and the Western Digital ST-506 controller, you get Phoenix's 1988 BIOS, Video Seven's 8-bit VEGA VGA board and a NEC MultiSync II monitor. The 285-watt power supply with four connectors was made by D.V. Power Supply. Altec uses standard AA batteries, which

are cheaper and easier to find but need to be replaced more frequently than do lithium batteries. The system also included 2MB RAM, two floppy disk drives (a 5¼-inch 1.2MB and a 3½-inch 1.44MB), and DOS 3.3.

The \$3,245 20-MHz unit we tested shared much with its slower sibling, though it came in a tower case. Where it differed, the ZIP-386/20 still sported impressive labels: its 1988 BIOS was written by Award Software; the ST-506-type controller was from Data Technology; the Seagate hard disk was upped to 65MB; and Paradise supplied the 8-bit VGA card. Strangely enough, the D.V. power supply found in this unit was only 275 watts strong but had an additional two connectors.

Monterey International Corp.'s Enhanced-style 101-key keyboard, which comes standard with Altec's PCs, is quite comfortable. The Enter key is oversized, and the F and J keys have convenient raised bumps. Unfortunately, the backslash key is awkwardly placed below, rather than above, the home-row keys.

Altec offers a 30-day money-back guarantee—but it won't pay for the shipping and won't take back the monitor. Support is a staff of three technicians who can be reached by a toll-free number during Pacific Standard Time business hours.

Altec's ZIP-386s may not be the fastest—or the cheapest—386s on the block, but they'll give you a reasonably solid, reasonably priced, *reasonably* speedy ride. —Mary Kathleen Flynn

AMAX ENGINEERING CORP.

AMAX PC/386-16
AMAX PC/386-20
AMAX PC/386-25

Amax Engineering has manufactured motherboards and system units for other companies for several years, but it is now taking the mail-order route and selling machines under its own name. From the outside, it's hard to tell the three Amax 386 computers apart. The 16-, 20-, and 25-MHz machines look the same, from their desktop dimensions to the number and lo-

Amax's 16-, 20-, and 25-MHz systems are remarkably alike, from their desktop dimensions to zero-wait-state operation. The Amax PC/386-25 differs most from its siblings in its use of an AMI, rather than a proprietary, motherboard.

cation of ports. Each uses the Maxi-Switch 101-key Enhanced-style keyboard (a reasonably responsive model with a positive keyboard click). The triple-vision effect was further enhanced by the identical Samsung VGA monitors shipped with the three test units.

Fortunately, the resemblance continues in terms of performance and price. Each machine runs with zero wait states (unalterable), automatically shadows BIOS and video ROM, and uses interleaved memory for greater speed. The systems racked up fine overall scores on our benchmark tests, falling in the midrange of their respective classes. And the prices are relatively low: the base 16-, 20-, and 25-MHz units—\$1,935, \$2,585, and \$4,460, respectively—include 1MB of RAM, one parallel and two serial ports, a game port, a floppy/hard disk controller, and a 1.2MB floppy disk drive. You can choose between the equally capable Phoenix and Award BIOSs.

Inside each unit sits a 200-watt power supply with only four device connectors, although the case can accommodate five devices. Expansion slots are the same on all three machines, too—two 8-bit and five 16-bit, as well as one 32-bit proprietary slot occupied by a memory card containing

We Wrote The Book On Write-Once Optical Storage.

And We Want You To Have One.

As the world's leading supplier of write-once optical subsystems for personal computers, Storage Dimensions has unique insight into optical storage. Our proven LaserStor™ family of internal and external Write-Once/Read-Many (WORM) optical disk subsystems offers 786 megabytes per cartridge of reliable, removable storage.

Incorporating the latest advancements in optical technology, LaserStor is a complete, plug-and-play solution ideal for data-intensive applications requiring large amounts of permanent data storage. Like CAD/CAM, image processing, desktop publishing, data acquisition, database distribution, archiving, backup and more. Subsystems are available for 286 and 386-based PCs, the PS/2 and Macintosh.*

Comprehensive, easy-to-read white paper

Nobody knows optical storage like we do. To prove it, we've prepared the industry's first in-depth report on write-once optical storage for personal computers.

If you're considering optical storage for a PC application, this paper is a valuable tool. It focuses

on a number of write-once optical storage topics including the technology, its benefits and applications, the market and integration issues. You'll get all the information you need to select the right product application.

Write for your copy today

For more information on our optical products or a complimentary copy of our white paper, contact the company that wrote the book on write-once optical storage. Mail your request on your letterhead to: White Paper, c/o Storage Dimensions.

In Short: Amax makes solid, commodity-type computers. Other vendors sell Amax's 16-MHz and 20-MHz units under their names, but now Amax sells the computers under its own name as well. Come for the price, stay for the quality.

all the system RAM. The standard systems use 256-kilobit memory chips for a maximum of 4MB of RAM, but you can order 1-megabit chips to get up to 16MB of slotted memory.

AMAX PC/386-16 Although notably homogeneous in many respects, the machines do differ in some ways. For instance, while both the PC/386-16 and PC/386-20 use Amax's own motherboards, the PC/386-25 features a Micronics motherboard. Lest you wonder whether Amax lacked the faith to install its own motherboard in its top-of-the-line machine, be advised that the company never did manufacture 25-MHz boards.

The 16-MHz Amax can be set to run at 6, 8, or the full 16-MHz via software. This

is less convenient than using keyboard toggles, but at least you can always put the speed setting command in a batch file.

The expansion-slot bus runs at a standard 8 MHz, although the increasing number of expansion cards that can take advantage of faster speeds makes this a somewhat conservative choice. Still, the 8-MHz bus speed is helpful since you can't slow the system down by changing wait states.

The unit's \$1,935 base price is an eye-opener. Even the test configuration (with 2MB of RAM, a Seagate 80MB hard disk drive, a VGA monitor, and DOS) costs only \$4,046. This model may not have killer speed, but think about this: for only a little more than you'd pay for a similarly equipped AT clone, you can have a true 32-bit 80386 system.

AMAX PC/386-20 The main difference between the Amax 16- and 20-MHz versions, besides the speed of the processor chip, is the cache memory found on the PC/386-20. An Austek cache controller chip on the memory board is in charge of 32K of 35-ns. cache memory.

There are other minor differences between the two machines. The expansion bus on the PC/386-20, for instance, is a straight 10 MHz, which is fine as long as you verify that the cards you want to add will run at this speed.

Our test unit with 2MB of 80-ns. RAM, a Maxtor 150MB hard disk drive, VGA card and monitor, and DOS came to \$5,463. If you can spend about \$1,500 more, this fully configured 20-MHz system works out to be even a better deal than the tested 16-MHz machine. You not only get a faster processor and cache memory, but also nearly double the hard disk storage space.

AMAX PC/386-25 Unlike the Amax motherboards found on the other PC/386s, the 25-MHz Micronics motherboard will take only an Intel 80387 or Weitek chip; there's no slot for any 80287 you might have hanging around.

The standard 25-MHz processor speed can be slowed to 8.3 and 12.5 MHz via software. You can set the expansion bus at either 8.3 or 12.5 MHz, a good compromise between old and new board speeds.

Of course, until Amax emulates Zenith's way of running individual slots at different speeds, the presence of just one of the older and slower boards in your system means that everything will have to run in slow bus mode anyway.

Unlike its siblings, the 25-MHz Amax unit garners an FCC A rating for office use only. That's not a great tragedy, though; the price of a fully configured system, while very competitive with other companies' 25-MHz machines, is probably more than what most home office users can afford to spend. The test machine, with 4MB RAM, an Intel 82385 cache memory controller, 32K of 35-ns. cache memory, the Maxtor 150MB hard disk, VGA card and monitor, and DOS, came to \$8,238.

While that price is one of the lowest we've seen for a fully configured 25-MHz 386, you should consider laying down that kind of money only if your activities demand an 80387 coprocessor and the increased RAM and processor speed.

While not particularly outstanding for any one trait, the Amax machines have two important things in their favor: their prices are on the low side, and the company has obviously proved its trustworthiness to the vendors who buy from it. If you're going to buy by mail, these factors translate into solid value. —Bruce Brown

AMDEK CORP.

AMDEK SYSTEM/386e

Amdek is best known for its monitors, but its System/386e is an immediate attention-getter as well, mainly because of its looks. It's not radically different from the AT look-alike clones, but the slightly slanting front and dark-tinted drive access cover make enough of a statement to be noticed.

The System/386e has a few other features that differentiate it from the norm, but for the most part, it's a straightforward 16-MHz 386 PC, available through dealers for a reasonable base price of \$3,499. The price includes 1MB RAM, one 1.2MB floppy disk drive, one parallel and two serial ports, and DOS.

A WYSE DESIGN The 386e uses a motherboard manufactured by Amdek's parent company, Wyse Technology. The

The slightly slanting front and dark tinted drive access cover help the Amdek System 386e stand out. The motherboard is an amalgamation of a horizontal expansion bus board, a horizontally mounted controller, and cards that hold the processor, ROM, and memory chips.

distinguishing features of the Wyse motherboard are its integrated components: a horizontal board on the bottom of the case serves as the expansion bus; behind it, but on the same plane, is a horizontally mounted Western Digital floppy/hard disk controller. Vertical expansion cards, also considered by Wyse and Amdek to be components of the motherboard, hold the processor, ROM, and memory chips.

The 386e has ten slots—three 8-bit and seven 16-bit—all of which run at a straight 8 MHz. The vertical CPU card and memory card sit in the two 16-bit slots on the far right. The memory card is connected to the CPU card via a top connector, giving the 32-bit 80386 processor direct access to the memory chips without having to go through the slower 16-bit expansion bus. The current 32-bit maximum memory on the card is a meek 6MB, although a 16MB card should be out by summer.

The keyboard has a responsive, clicky feel, which is fortunate because the use of a modular phone plug type of connector instead of the more usual round 3/4-inch plug means that replacing the keyboard could be a problem. It is similar to the usual 101-key Enhanced-style keyboard except for an additional Select key. This key is used in combination with function keys to

switch between 16- and 8-MHz operating speeds and to access Amdek's built-in Help system.

Amdek's on-line Help system assists you in using Amdek's customized version of MS-DOS 3.3. The company has also altered the Phoenix ROM BIOS, adding such enhancements as DOS-compatible support for hard disk drives larger than 32MB.

THE TEST MACHINE The tested machine, with 2MB of RAM, an 8-bit VGA card, and an Amdek VGA monitor, is available at a list price of \$6,034. That price includes the only hard disk drive Amdek supplies, a 43MB 28-millisecond Seagate ST-251-1. Emphasizing its dealer sales orientation, Amdek looks to dealers to install larger hard disk drives to customers who want them. For the same reason, Amdek doesn't sell math coprocessor chips, although the 386e has sockets for both an 80287 and an 80387.

At 16 MHz, the 386e runs with zero wait states, using 100-nanosecond static-column DRAM chips. Memory is interleaved, but there is no cache or shadow RAM. The design works well, however: the 386e scored above average for 16-MHz 386-based machines on all memory and processor benchmark tests.

The Amdek is interesting mainly because of its mother/memory board ar-

angement, nonstandard keyboard, and case front. Just as important, you get good performance and the security of buying a system from an established computer equipment company. As far as price and performance go, the 386e has the right ingredients.—Bruce Brown

AMERICAN MITAC CORP.

**MITAC PARAGON 386C
MITAC PARAGON 386E**

Do you own an endangered desk top, one of those pieces of office real estate threatened with extinction by encroaching papers, pens, and peripherals? If so, you might be interested in seeing just how much can be crammed into small-footprint computers like the American Mitac Paragon 386C and 386E.

These 386s are nearly identical except for their CPU clock speeds: the Mitac Paragon 386C (base-priced at \$2,775) runs at 16 MHz, and the Mitac Paragon 386E (\$4,050) clips along at 20 MHz. They use the same motherboard and components, the same case, the same keyboard, and even the same manual.

The case design shows some innovative and useful features. It has, for example, only two 5 1/4-inch drive bays (both of which are open to the outside through the case). In other computers, this might be viewed as a major limitation, but not here. That's because you also get a 3 1/2-inch drive bay, placed on its side, next to the 5 1/4-inch bays; the setup lets you have both a 3 1/2- and a 5 1/4-inch floppy drive, with room left over for a tape drive. An additional 3 1/2-inch internal bay is perfect for holding one of the new small, low-power hard disks. The \$5,638 16-MHz and \$5,668 20-MHz review units came with drives from Conner Peripherals: a 100MB and a 40MB, respectively. The 145-watt power supply is strong enough to handle just about any expansion plans you might have for these machines.

DESIGNED WITH CARE The case is also ruggedly built; one side of the disk bays extends all the way to the back of the case to form a rigid divider that adds stability and strength. The keyboard cable plugs

Today, desktop publishing means more to business than ever before. And Aldus PageMaker®

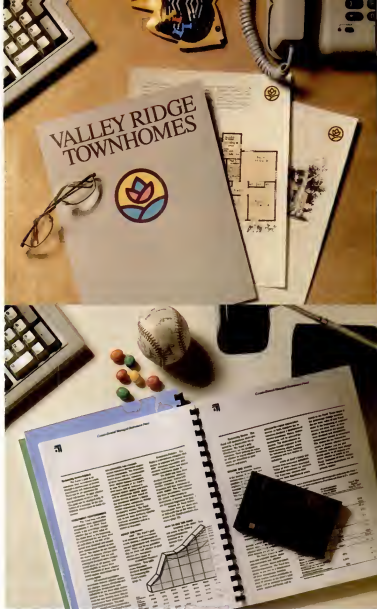

means desktop publishing to more businesses worldwide than any other software program.

Unlike less versatile programs, PageMaker lets you quickly create everything from simple business forms to award-winning brochures. And it makes short work of long documents, too.

Your computer becomes a powerful business communications tool. Which gives you greater control of deadlines and costs while making your document processing more productive.

If you can use a computer, you can create great-looking documents with PageMaker. Professionally designed templates give you a streamlined way to generate hard-hitting reports, manuals, or newsletters. So you don't need a degree in graphic design to make a graphic impression.

Only a program like Aldus PageMaker makes it so easy to incorporate spreadsheets, logos, charts, tables, and other graphics into your documents. Materials that once took days can be produced in hours.

AND YOU THOUGHT DESIGN WAS NONE OF YOUR BUSINESS

*Offer good in U.S. and Canada only and expires September 30, 1989. Aldus, the Aldus logo, and PageMaker are registered trademarks of Aldus Corporation. Macintosh is a registered trademark of Apple Computer Inc. ©1989 Aldus Corporation. All rights reserved.

PageMaker works well in your existing business environment, too. It does a beautiful job of integrating with your favorite word-processing and spreadsheet programs. Its files even transfer directly between Macintosh and PC versions. Plus, it works with more business software and printers than any other desktop publishing product available today.

So if you thought desktop publishing was none of your business, think again. And consider how PageMaker can give your business a competitive edge.

See why PageMaker means business.

To see how easily PageMaker can improve your business communications, and your bottom line, visit your authorized Aldus dealer. Or, call 1-800-333-2538, Department 10-B2 for a FREE Aldus PageMaker information packet.*

The Creative Edge
in Business.

ESKTOP PUBLISHING OUR BUSINESS.

The small-footprint case of the Mitac Paragon 386E, like its 16-MHz sibling, is ruggedly and thoughtfully built: in addition to two 5-inch and one 3½-inch bay, an internal bay can hold a small, low-power hard disk.

conveniently into the front of the case, where you also find a power switch and a reset button.

The company's own motherboard shows similar evidence of thoughtful design. It comes with two serial ports, a parallel port, and a floppy disk controller built right in. There are only five expansion slots (one 8-bit and four 16-bit), but the de-

American Mitac machines offer a Phoenix BIOS, with its useful setup programs.

mands on these should be low given the features built into the motherboard.

The only problem with the motherboard is its memory limitations. It can accept either 256-kilobit or 1-megabit SIMM packaging. You can install either four or eight modules, which means you can have

only 1MB, 2MB, 4MB, or 8MB 32-bit memory configurations. While 8MB of 32-bit memory may seem like enough for the moment, there is reason to believe that we may be looking at 12MB or 16MB as commonplace configurations in the not-so-distant future. Furthermore, you only get the performance benefits of interleaved memory in the 2MB and 8MB configurations.

American Mitac's own hard disk controller and 8-bit VGA board are admittedly not well known, and the test keyboard had a mushy Enhanced-style feel to it. The computers did offer a Phoenix BIOS, though, with its attractive and useful setup programs in ROM. The BIOS that came with the 20-MHz Mitac Paragon 386E offered an especially nice setup routine that gives access to disk drive and memory configuration, among other features.

The two models performed adequately

enough in memory and processor tests, but without the benefit of a hardware cache, they tended to yield below-average figures. The disk test numbers were better: a bit above average for their respective classes. According to a representative from American Mitac, the latest version of the Conner drives performs even better.

I encountered only one real flaw in the machines. Both offered the ability to adjust the I/O bus speed for the expansion slots, and, although both worked at the promised 8- and 10-MHz speeds, they produced results opposite to the settings chosen during setup. In other words, a 10-MHz setting produced an 8-MHz result, and vice versa. The company said that this was a problem with early versions of the machines and has since been corrected.

While the systems have some limitations in terms of memory and slots, they should serve well for anyone with modest expansion plans. Some of the components are less familiar than are the industry standards, but good construction quality indicates that care and thought went into the design and assembly. And though the prices are not rock-bottom, they're still within the range of consideration, especially if you are fighting a losing battle to regain control of your desk top.

—Alfred Poor

Mitac Paragon 386E

List Price: With 1MB RAM, 1.2MB 5¼-inch and 1.44MB 3½-inch floppy disk drives, DOS 3.3, \$4,050; with 40MB hard disk, monochrome monitor, \$4,504; with VGA monitor, \$5,213; with 2MB RAM, 100MB hard disk, \$6,393. 1MB RAM upgrade, \$320.

CIRCLE 429 ON READER SERVICE CARD

In Short: Sharing all features other than clock speeds, the Mitac Paragons are somewhat limited in expansion slots and memory capacity, but nevertheless merit consideration—especially if desk-top space is at a premium. The lack of a hardware cache hindered otherwise adequate benchmark test scores.

ARCHE TECHNOLOGIES INC. ARCHE RIVAL 386

First impressions count, and Arche Technologies' Arche Rival 386 starts off ahead of many of the cookie-cutter AT-clone boxes. This small-footprint machine is attractively designed, with nicely rounded edges. Internal device expansion is limited to three half-height drives, but there are sufficient interface slots (eight in all) and enough memory capacity to satisfy most users' needs. Sharing your desktop with this computer isn't bad at all.

The Arche Rival 386's \$3,895 base unit price includes 2MB of 80-nanosecond RAM, two parallel and two serial ports, a 1.2MB floppy disk drive, a floppy/hard disk controller, a monochrome adapter with 14-inch flat-screen, 1,000-line-resolution monochrome monitor, DOS 3.3, and GW-BASIC. The test machine also in-

INTRODUCING

THE "COMPLEAT" * DISK and FILE MANAGEMENT SYSTEM

FATCAT™

Makes your PC PURRRRRRR!

■ Finally, someone has put all the most wanted disk and file management utility functions into a single, comprehensive package. And every function is richly crafted to give you the finest software of its kind.

FATCAT is heavy with utility features that make it the **compleat** disk and file management software. And FATCAT integrates functions from other time proven SoftLogic utility programs, with access to all functions from one screen.

■ Uniquely Useful

With FATCAT you get features you just can't get with any other utility! You can **annotate** your directory listings with 35 character descriptions to remind you of what's in each and every file. Or there's FATCAT's "folders" which make long paths and sub-subdirectories just a bad memory.

■ 9 Lives Plus!

FATCAT gives you everything you'll ever need for effective and efficient disk and file management. Your PC will really purrrrr! You get:

- 100% Deleted File Recovery+Format Recovery
Everyone makes mistakes.
- Password Protection for Files
Keeps the eyes of strays from prying.

*COMPLEAT: From Webster's—"of or marked by a highly developed, wide ranging proficiency or skill."

- File Compression Saves Disk Space
Who couldn't use a little more?
- Disk Performance Optimization and Disk Fragmentation Analysis Keeps Your PC moving FAST!
- Time Release File Protection Gives Your Data 9 'Lives'.

• File Management and Handling, including folders
FATCAT gives you the finest file manager!

- Extensive Browse/Edit/Formatted-Peek Facility
FATCAT sees all

- Menu Building and Extended Point and Shoot Program Starting

For the easiest access to all your software.

- And More

Menu Access and **Expert Keys** for everything! File and Directory Sorting, Two File Search Facilities, Easy DOS File Attribute Modification. And much, much more.

■ A Fur-Raising Rebate!

And here's something to make you lick your whiskers: buy FATCAT before June 30, 1989 and get a \$20 rebate! Simply send us your FATCAT registration card, a proof of purchase (receipt or credit card slip), and a rebate card (available at your local software dealer) by August 1, 1989, and you'll have \$20 to fatten up your wallet!

How to avoid making backups.

Make Irwin® do it.

An Irwin tape backup system, that is.

So go home early. Because an Irwin system will back up your data, your programs, your breakthrough ideas—all automatically.

No complicated commands.

No sloppy floppies.

Our EzTape® software makes it easy to store whatever data you want. Whenever you want.

It doesn't matter whether you're backing up a PC or a Mac.

An Irwin backup system works with them all. Along with all the popular local area networks. Providing up to 150 megabytes of reliable storage.

In fact, with its patented AccuTrak™ precision tracking technology, you can transfer data from a PC to a PS/2 to a Mac and back again.

Something that would throw a floppy right off its track.

All in all, that's why more people rely on Irwin minicartridge systems to do their backup than all others combined.

Just call 1-800-BACKUP1 for the dealer nearest you.

Because the best way to make backups is to avoid it.

With its small footprint and nicely rounded edges, the Arche Rival 386 breaks out of the AT-clone mold. The machine also departs from the norm by offering 20-MHz speed using a 16-MHz processor teamed with a 20-MHz crystal.

cluded a 1.44MB floppy disk drive, a 660MB RLL hard disk drive, and an EGA video adapter and display, for a list price of \$5,569. While these prices may be higher than you'd pay for a mail-order machine, they compare well with national brands like AT&T, Compaq, IBM, Tandy, and Zenith.

FACT FILE

Arche Rival 386

Arche Technologies Inc.
48881 Kato Rd.
Fremont, CA 94539
(800) 422-4674
(415) 683-6760

List Price: With 2MB RAM, 1.2MB 5¼-inch floppy disk drive, monochrome monitor, DOS 3.3, \$3,895; with 660MB hard disk, \$4,800; with EGA monitor, \$5,400; with 1.2MB 5¼-inch and 1.44MB 3½-inch floppy disk drives, \$5,569.

In Short: The Arche Rival 386 is a good-looking small-footprint model that squeezes 20-MHz performance out of a 16-MHz processor. It holds its own against other 20-MHz units in speed tests but doesn't have a price advantage, other than an exceptional 2-year warranty through Arche dealers.

CIRCLE 411 ON READER SERVICE CARD

PSEUDO SPEED? The Arche Rival 386 is sold as a 20-MHz unit, but a look inside reveals an Intel 80386-16 processor chip teamed with a 20-MHz crystal; the crystal controls the actual operating speed. Although this is not an uncommon practice, Intel recommends against pushing its chips faster than the rated speeds. Arche Technologies has taken care of the major cause for concern by installing fast (and expensive) 80-ns. memory chips.

The vendor assured us that it has never had a boosted 16-MHz chip fail, and we encountered no problems while running the machine at 20 MHz and zero wait states. Our benchmark tests showed that the system held its own with many of the true 20-MHz units, ranking near the middle of the spectrum.

Arche Technologies makes its own motherboards and uses a Phoenix ROM BIOS and a Chips and Technologies chip set. All memory is fitted onto a 32-bit memory expansion card, which can hold 8MB. A second 32-bit slot can accommodate another memory card with an 8MB capacity, bringing the system maximum to 16MB of 32-bit RAM, more than enough to run current OS/2 and DOS applications.

The expansion bus runs at 10MHz, the high end of the usual standard for interface cards. With newer cards you should be OK, but it doesn't hurt to check if the add-in cards you need will run at that speed.

Four slots are available after adding in one floppy/hard disk controller, a single memory card, a video adapter, and a parallel/serial card. The 200-watt power supply isn't stingy, considering the three-drive limit of the system. There are four device connectors, though, so you could theoretically run an external device as well.

Arche offers eight hard disk drive options, ranging from 20- to 122MB. Since you won't be able to add a second internal hard disk drive, you should buy the highest-capacity drive you can afford the first time around.

The system deserves a better keyboard than the overly mushy Hi-Tek unit that came with the test machine. Hi-Tek keyboards usually have more response than the one we received, so the decidedly soft feeling was something of a surprise.

If you need lots of room for disks and tape drives, or worry that this isn't a real

20-MHz machine (although it sure acts that way), you'll probably want to look elsewhere. But if you want a brand-name computer that is sold and supported by local dealers, performs well, and doesn't hog desk-top space, the Arche Rival 386 fits the bill.—Bruce Brown

AST RESEARCH INC.

AST PREMIUM/386C

Following on the heels of the AST Premium/386 Model 300 is the company's latest 20-MHz unit, the Premium/386C. The "C" in the name stands for *cache*, and it represents the major performance enhancement made to the system: the addition of 64K of 25-nanosecond SRAM cache memory. (The Model 300, sans cache, is still available at a base price of \$4,195.)

The \$4,395 base system with no hard disk drive includes AST's own BIOS, the Intel 386 processor, a 1.2MB floppy disk drive, DOS 3.3, and GW-BASIC. A floppy disk controller plus one parallel port and two serial ports all reside on a motherboard made by AST itself. In addition, you get a 220-watt Triag power supply, plus easy access to three of the five half-height drive bays. All of this comes packaged

FACT FILE

AST Premium/386C

AST Research Inc.
2121 Alton Ave.
Irvine, CA 92714
(714) 863-1333

List Price: With 1MB RAM, 1.2MB 5¼-inch floppy disk drive, DOS 3.3, \$4,395; with 40MB hard disk, monochrome monitor, \$6,085; with VGA monitor, \$6,789; with 2MB RAM, 90MB hard disk, \$6,995. 1MB RAM upgrade, \$999; 150MB hard disk, \$2,995; 40MB tape backup, \$695.

In Short: Cache memory is the chief improvement found on AST's latest 20-MHz 386, a machine that tested well in the top half of similar 20-MHz models; 24-hour on-line support is another plus. One drawback is the machine's partial SMARTSLOT architecture, a design for which no one, not even AST, has yet announced plans to manufacture boards.

The three SMARTslots in the AST Premium/386C will accept standard AT and XT cards. But their main purpose is to enhance performance by unloading some of the CPU's work onto boards (as yet unavailable) that take advantage of their capabilities.

in a box 2 inches narrower than an IBM PC AT.

The unit we received sported a Western Digital controller capable of controlling two hard and two floppy disk drives, giving the system the ability to handle three floppy drives total. A CDC 90MB hard disk drive, AST's 16-bit video card, and an AST VGA monitor were also included for a list price of \$6,995.

No RAM is located on the motherboard; instead, the cache memory and standard 1MB of 100-ns. SIMMs are found on a 32-bit memory board. If you use 1-megabit chips, you can pack the board with 16MB of RAM. This method saves you motherboard real estate and greatly simplifies the memory upgrade process.

SLOTS WITH AN IQ Besides the proprietary 32-bit slot, you get one AT-style 16-bit and two 8-bit slots. The other three 16-bit slots are what AST calls SMART-slots: specially designed expansion slots that can enhance overall system performance by unloading some of the processor's work onto boards designed to take advantage of the distributed processing.

The problem is that no one—not even the people at AST—has yet come out with

the boards that will do this. Until someone does, you can just plug XT- or AT-compatible boards into the SMARTslots. (AST says that it does have plans for such boards in the works, but declined to be more specific.)

Our benchmark tests showed that the new and improved AST performed consistently in the top half, and frequently ranked in the top third of the machines in its range. It was nearly always well ahead of its IBM counterpart.

A grab bag of utility software to improve performance and help with diagnostics comes with the system. We found disk caching software, memory management utilities, RAMdisk software, and a print spooler. The documentation for these utilities and the machine's user manual were incomplete preliminary versions, but what was there looked good.

Also worth mentioning is AST's 24-hour support. If you have questions at any time of the day or night, you can get to an AST technician via a bulletin board—not much use if your only computer is down, but a great help otherwise.

The addition of cache memory enhances an already respectable system design. AST has always had a good name as a components manufacturer, and its latest machine seems to corroborate its growing reputation as a capable systems builder. The Premium/386C is well worth a look. —Kate Emery

AT&T AT&T 6386 WGS

While the argument in favor of desktop and large-sized personal computers usually centers around the number of expansion slots and drives these systems can handle, the intended market for AT&T's 20-MHz 6386 WGS (\$3,495 base price) goes beyond users who just want a lot of elbow room.

WGS stands for Work Group System, referring to the system's ability to support up to 32 users and accommodate up to 48MB of 32-bit RAM. An indication of this machine's target market is that during last fall's AT&T sales campaign, every 6386 WGS sold came with a free terminal.

Running under Unix, the 6386 WGS's

function is to serve primarily as a multiuser, multitasking machine for departmental workgroups or as a file server for a department-level network. The claim of 32-user support refers to the maximum number of users who can run their terminals at acceptable performance levels under a multitasking operating system using this computer as the primary CPU.

Of course, if you've a real yen to have some extra-heavy-duty hardware all to yourself, the AT&T 6386 WGS (which is actually made by Olivetti) is an interesting alternative. The WGS has a separate steel box that encases the main, hidden hard disk drive to minimize interference from stray radio-wave emissions. There's a huge fan that protrudes from the back of the system unit just to keep everything cool inside, clearly in expectation of the computer's being stuffed with heat-producing memory expansion and network cards. The expansion bus runs at 10 MHz; two 8-bit, two 16-bit, and three 32-bit memory expansion slots (each of which can hold memory cards filled with up to 16MB of DRAM) are included.

OLIVETTI INSIDES The Olivetti motherboard hosts the 20-MHz 386 chip; the Olivetti BIOS, Version 1.14; a floppy

The AT&T 6386 WGS is designed for heavy-duty, multiuser operation. A steel box encases the main hard disk to minimize radio-wave interference. A huge fan means you can stuff the unit with heat-producing memory and network cards.

FACT FILE

AT&T 6386 WGS

AT&T
1 Speedwell Ave.
Morristown, NJ 07960
(201) 247-1212

List Price: With 1MB RAM, 1.2MB 5¼-inch floppy disk drive, \$3,495; with 40MB hard disk, monochrome monitor, DOS 3.3, \$5,290; with VGA monitor, \$5,313; with 68MB hard disk, \$6,913; with 135MB hard disk, \$7,913. 1MB RAM upgrade, \$749; 60MB tape backup, \$1,495.

In Short: This very rugged machine looks larger than it actually is; it's intended to be used as a multitasking machine for departmental workgroups. Able to hold up to 48MB of 32-bit RAM, this one is probably too much machine for the needs of an individual user.

CIRCLE 412 ON READER SERVICE CARD

disk drive controller; and one parallel and one serial port. The system also offers zero wait states and the ability to shadow both BIOS and video ROM. The test machine included an 80387 math coprocessor, but the WGS will also support a Weitek 1167 chip.

On the test machine, a Western Digital 1:1 interleave ESDI hard disk controller ran an 80MB CDC hard disk drive. The Key Tronic Enhanced-style keyboard is passable but a bit soft.

On a pure speed basis, the WGS scored in the middle of the 20-MHz pack on our benchmark tests. Think of it as a large, fast, luxuriously equipped bus—not a swift sports car with room for only two.

The WGS is an expensive machine. The test configuration with 4MB of memory, an 80MB hard disk drive, an 80387 20-MHz coprocessor, and a combination 8- and 16-bit VGA display setup lists for \$9,607, a pretty penny indeed. If you fill it up with memory, the unit can easily cost you more than \$40,000, as each fully populated 16MB expansion card has a price of almost \$12,000. It's hard to imagine this computer as a single-user system; it lacks the performance that engineering and desktop-publishing applications most need. But this system is a heavy-duty worker, and it should last a long time.

—Bruce Brown

BUS COMPUTER SYSTEMS

BUS 386/16
BUS 386/20
BUS 386/25

Bus Computer has been in business for the past 5 years, but in that time it has gone through at least two name changes. What may set the company apart from a host of other clone-makers, besides its chameleon identity, is its choice of components. All 386 machines purchased with 64K cache memory, like the ones we reviewed, are built around an American Megatrends Inc. (AMI) motherboard. Each base unit even comes standard with the fast and full-featured Distributed Processing Technology (DPT) controller card plus 512K disk cache, a combination that alone retails for over \$1,200 (see the sidebar "Hard Disk Speed: The Cache Advantage").

The Bus 386 machines are available with three processing options. The 16-MHz computer, with a 1.2MB 5¼-inch floppy disk drive, one parallel and one serial port, 1MB of RAM, 64K cache memory, and an Enhanced-style keyboard, sells for \$1,799. A 20-MHz model with the same configuration sells for \$2,099. And the price of the 25-MHz base unit jumps to \$3,650.

All Bus 386 models are built within a mighty tower encasement. There is an immense drive bay capacity that can accommodate a total of seven half-height devices. Front power and reset buttons sit alongside an LED with a 2-inch-high digital readout of your processor's current speed. This is probably most useful as a check when toggling down to the slower 8-MHz speed.

BUS 386/16 The tested Bus 386/16 was a conspicuous entry. Though an Intel 16-MHz microprocessor chip was mounted squarely in the middle of the motherboard, this machine ran consistently at 20 MHz in all our tests. Even the bus speeds were equal to those of the Bus 386/20, running at both 8 and 10 MHz. The Bus 386/16, in fact, fared much better than the 386/20 in the 80386 Instruction Mix test results.

Some might consider Bus's strategy an effective way to achieve 20-MHz speed at a 16-MHz price. But there are two reasons

why this deal is no bargain. First, Intel does not guarantee the integrity of its chip on computers running at higher speeds than the processor. Second, the 16-MHz model, in all configurations, is only slightly less expensive than the Bus 386/20. For instance, our test 16-MHz configuration, which differed mainly from the 20-MHz evaluation unit in terms of processor speed and hard disk size, was priced at \$4,699, only a slim \$300 less than the 386/20.

As far as we know, Bus Computer's advertising and marketing do not promote the faster speed rate achieved in the 16-MHz model, so it doesn't appear as if the company is trying to capitalize on the occurrence. If choosing between the two, though, be on the safe side and stick with the Bus 386/20 machine.

BUS 386/20 For instant adjustments and convenient testing, setup and diagnostic software are built into the ROM of all Bus computers. Shadow RAM is automatically invoked on these machines unless you toggle it off in setup. On the Bus 386/20, which came configured with 2MB of RAM, the 384K above the 640K base is reserved for BIOS and video enhancement—allowing only 1MB of available extended memory. The display update

Like the 16- and 20-MHz cache-RAM-equipped Bus towers, the Bus 386 25 is built around an AMI motherboard and comes standard with Distributed Processing Technology's fast disk controller with a 512K disk cache.

The Panasonic Boom: the next generation in business.

**"From what I've seen,
these Panasonic printers
are setting a new standard
in price/performance.**

So I got all three.

**The 1191 is by the register,
the 1124 is in the back office
and the 1180 is at home."**

Next generation in printers. All in the family.

KX-P1100

Resident type fonts on all 1100 Series printers include draft pica and elite, letter-quality or near-letter-quality Courier, Prestige, Bold PS and Sans Serif Plus Script on the 1124.

All these resident LQ or NLQ fonts are available in ten different character sizes.

And print speeds go from 38 to 63 cps in letter-quality/near letter quality. And from 160 to 240 cps in draft.

The 1100 Series printers also produce graphics as well as they handle text. Resolution is crisp, clear, precise. With bit image matrixes from 240x216 dpi to 360x360 dpi.

All of these features enhance your ability to create—and be creative.

The 1100 Series printers were designed for non-software experts.

The EZ-Set™ Operator Panel allows you to make choices simply and quickly—without having to program any software.

The ergonomic design presents you with settings for the features you use most. Fonts, pitch, form length and many

more choices can be pre-set on the panel. And the 1124 even has a Macro feature that allows you to easily save and recall all the panel settings for three different formats.

Selectable on the EZ-Set™ Operator Panel:

- Fonts: 4 to 6, depending on model
- Pitch: 4 to 6, depending on model
- Form Length: From 8" to 14"
- Quiet Mode: Cuts printer noise by 50%
- Micro Line Feed: forward and reverse
- Perforation Cut

- Self Test
- And more

Plus the protection of a two-year warranty.

The 1100 Series is a family of full-featured 24- and 9-pin printers. Compatible with the rich

software libraries supporting both Epson® and IBM® dot matrix printers. And protecting your investment with something you'll find on very few printers out there: a two-year warranty*** on both parts and labor, from Panasonic.

That makes them good investments.

From any business perspective.

KX-PT124

KX-PT191

A highly-sophisticated 24-pin. And two companion 9-pins. These are the remarkable dot matrix printers which make up the 1100 Series from Panasonic.[®]

They'll meet your needs today—and tomorrow—with flexible paper handling, multiple resident fonts and unsurpassed ease of operation.

For the demands of the present, each 1100 Series printer offers advanced features, ergonomic design, and attractive prices to suit the requirements of a business, a department, an application or an individual.

For the demands of the future, the 1100 Series provides a smooth progression of printing capabilities to grow into...and grow along with.

Versatile paper handling to meet all of your needs.

In engineering the 1100 Series printers, Panasonic placed a high priority on paper handling. With that in mind, an ingenious push/pull tractor feed system was incorporated into the 1100 Series. The idea was not

simply to accommodate a plethora of paper shapes, sizes and weights, but to allow the user to handle everything from single sheets to multi-part forms to fanfold paper—even envelopes and labels—quickly and easily.

All 1100 Series printers can accommodate single sheets in both landscape and portrait orientation.

So presentations incorporating graphics with text present no problem.

All 1100 Series printers offer multiple paper paths for continuous paper. And since paper can be fed from your choice of bottom or rear, you can put an 1100 virtually anywhere.

1104 printer shown

the perforation on fanfold paper, bring the perf to the tear bar for easy tearing, and then position the next sheet of paper for printing. Without wasting a single sheet. And all 1100 Series printers have a 'paper park' capability. On demand, continuous paper is retracted and 'parked' so that sheet paper and envelopes can be loaded and printed without unloading—and wasting—the fanfold paper.

Thousands of ways to exercise creativity.

CIRCLE 608 ON READER SERVICE CARD

In Short: Built with quality components, these tower-sized systems offer such features as a superfast DPT controller card with 512K built-in disk cache and, as an option, 64K of cache memory. Though base prices are reasonable, the systems are a better bargain with each option added.

rates, however, will increase in excess of 100 percent with shadow RAM enabled. This is particularly valuable when you are using screen-intensive applications like CAD/CAM software.

Besides the 2MB of RAM, the tested 386/20 included a number of high-quality components, such as a 100MB Priam hard disk, Video Seven 16-bit VGA color

adapter, and NEC MultiSync II monitor, plus 3½-inch and 5¼-inch floppy disk drives, at a list price of \$4,999.

The AMI Mark II XT 386 motherboard used in this configuration is unable to accept memory directly. Instead, the architecture incorporates an accompanying 32-bit card with capacity for 8MB of memory. Another 8MB can be loaded via a daughtercard, thus bringing the total 32-bit memory to 16MB.

Theoretically, this motherboard could take up to 64MB of RAM using 4-megabit chips. By the same token, the AMI Mark II AT motherboard used in the 25-MHz machine could hold up to 96MB. AMI cautions you, though, that not only is the 4MB chip presently in short supply, but the ones that are available haven't been around long enough for the company to test both their integrity over time and their compatibility with the AMI boards.

But there are plenty of other features to recommend the AMI motherboard, like 64K of built-in cache memory controlled by a proprietary discrete logic. And the eight full-size slots allow enough expansion to suit most users. On top of that, the unit did well on our benchmark tests, garnering midlevel to high scores on most tests. Fortunately for the Bus 386/20, it is a machine equal to the sum of its parts.

BUS 386/25 One of the most outstanding buys in its class, the Bus 386/25 we tested came equipped with robust features: a monstrous 330MB Priam fixed disk, 1.2MB 5¼-inch and 1.44MB 3½-inch floppy disk drives, the same VGA complement as the Bus 386/20, and the standard 4MB of RAM—all for under \$9,000.

The AMI motherboard on this model runs the AMI Mark II AT 386 BIOS. This version of the AMI motherboard is more intelligent than the AMI Mark II XT used in the Bus 386/16 and Bus 386/20 models. The Mark II AT will automatically find memory as it's added, whereas the Mark II XT requires manual switch adjustment on the motherboard.

The Bus 386/25 performed in the mid-to-high range of machines in its class. The fast DOS File Access times (small-record) can be attributed to the DPT controller. Though impressively fast in this one category, the controller probably won't direct-

ly affect the speed of most applications. As the Bus 386/25 is a strong performer overall, it was doubly puzzling to see an amazingly slow transfer speed between the hard disk and the 5¼-inch TEAC floppy disk when doing some routine file copying. When stacked up against the unit's other features, however, this one annoyance is less outstanding.

EXTRA VALUE FOR NETWORKS Because of their standard components, the Bus 386 line of computers exhibits promis-

**The Bus 386/20
did well on our
benchmark
tests and is a
machine
equal to the sum
of its parts.**

ing quality at reasonable prices—especially as you add more options. You get extra value, for instance, if you plan to use one of the Bus machines as a Novell file server and choose any Priam hard disk to go along with it. Priam ships its hard disks Novell NetWare-ready: they are preformatted with DOS or Xenix and have had Novell COMPSURF run on them at Priam's own testing lab. This saves you several days of testing prior to installing the network software.

In particular, the combination of the Priam 330MB hard disk (which alone retails for \$3,000) and the Bus 386/25 gives you outstanding network capacity at top speeds for an unbeatable price. Throw in a tape backup unit, and this configuration has server written all over it.

The 20- and 25-MHz models represent particularly good buys whether you plan to use them as servers or not. Good prices, excellent features, and high speed make them well worth a look.—Tami Peterson

100,000 *hours MTBF*

The world's most popular disc drives are also the most reliable. Seagate's ST225 family of 5.25" half-height drives now features a mean-time-between-failure of 100,000 hours for unsurpassed reliability and

data integrity in your personal computer.

The ST225, ST225R, ST238R and ST250R offer formatted capacities of 21, 21, 32 and 42 megabytes respectively, and are ideal as add-ins or upgrades for IBM® PC/XT/AT's™ and compatibles. When paired with Seagate's own ST11M or ST11R controllers, you're assured of the most reliable, cost-effective storage solutions available today.

More than 8 million of these drives have been shipped to quality-conscious computer users

around the globe. They know that every Seagate model is built to the same high quality standards that have made Seagate the first name in disc drives worldwide.

For more information on the world's most reliable disc drives, contact your authorized Seagate dealer, or call Seagate directly at 800-468-DISC or 408-438-6550.

 **Seagate**

The first name in disc drives

CANON USA INC. CANON A-200SX

Canon largely controls the personal copier world and also makes the laser printing engine used by many vendors, including standard-setting Hewlett-Packard. But it won't capture the 386 market with its lone offering, the A-200SX. On the plus side, the unit (actually an Acer Technologies 16-MHz machine with a new case) is fast, but its high price and lack of system expansion options through Canon's own dealers are problems too significant to ignore.

The desktop-sized machine is available in one \$5,500 configuration only, with 1MB of motherboard RAM and a 40MB MiniScribe hard disk drive. The one option is an EGA video card and Acer monitor combination that, at \$980, brings the total system price to \$6,480. The only other item you can buy from Canon for this computer is a set of DOS manuals for an extra \$140. (DOS and GW-BASIC software are included in the base price.)

The A-200SX also includes two serial ports and one parallel port, a 5¼-inch 1.2MB floppy disk drive, and a 200-watt power supply with five device power connectors. The case will take five half-height storage devices with three exposed for removable media. The 101-key, Enhanced-style keyboard, also made by Acer, has a nice clicky touch, although it may feel a bit loose to some people.

The motherboard is Acer's and the

The Canon A-200SX is really an Acer Technologies machine with a new case. Canon offers only an EGA card/monitor option for its base configuration; to fill the 32-bit memory slot, you'll have to turn to Acer.

BIOS is Award's, Version 2.02. Despite the inclusion of the letters SX in the machine's name, it uses an honest-to-goodness 80386, 16-MHz chip. There are eight expansion slots—two 8-bit, five 16-bit, and one proprietary 32-bit slot for memory expansion. Right off you have a problem—the 32-bit slot will stay empty if you rely on Canon to fill it. Fortunately, any Acer dealer will sell you Acer's memory expansion boards, which work just fine. The Canon can take up to 4MB of RAM on the motherboard and a total of 16MB using memory expansion cards.

MORE ALIKE BY THE LOOK The similarities with the Acer machine go on and on. The Canon uses Acer's Smart-Mode processor control, which slows down the system to 8 MHz when floppy disk drives are accessed. If your software isn't picky, you can turn off the Smart-Mode. You can also turn on or off shadow RAM loading of video and ROM BIOS. The Canon A-200SX did well in our benchmark testing, scoring right along with the Acer 16-MHz version in the upper half of the 16-MHz machines.

Canon's stated intention of limiting configuration alternatives so as not to initially overwhelm the customer with tough

choices doesn't help much when the customer needs support or is ready to add on other equipment. And it won't help Canon's public relations when the customer finds that the Acer dealer who can provide him with the expansion options he needs also sells a computer similar to the one he bought, only with more memory, a larger hard disk drive, and a VGA monitor—for about a thousand dollars less.

Worse yet, he may notice that for a few hundred dollars less than what he spent, he could have gotten a 20-MHz Acer 386. Ops.—Bruce Brown

COMPAQ COMPUTER CORP. COMPAQ DESKPRO 386/20E COMPAQ DESKPRO 386/25

Compaq has a reputation to maintain as a technological and market leader. Fittingly, its top-of-the-line Deskpro 386/20e and Deskpro 386/25 are stocked with first-class components and distinguished by solid engineering. The other side of the story is that Compaq's pricing has always been on the high side—\$5,199 for the 20-MHz base system and \$8,299 for the basic 25-MHz unit.

The Deskpro 386/20e and 386/25 both run on Flexible Advanced Systems Architecture, a method that uses the Intel 82385 cache controller chip to allow concurrent or simultaneous system memory access and peripheral activity. The result of the extra hardware is faster overall performance in real-world tasks.

Both base machines come with Compaq's own motherboard and BIOS, 1MB of 32-bit RAM, one 1.2MB floppy disk drive, one parallel and one serial port, and sockets for 80387 or Weitek coprocessors (the 386/25 can use both at the same time). They share a similar keyboard—the cases are different, but the keys have the same uninspired soft touch.

Compaq offers a range of enhancement options, but be careful about what you're getting. The list price of either configuration, with the maximum available memory, hard disk and tape storage, highest-quality video, and math coprocessor could easily exceed \$20,000. An example of the price

FACT FILE

Canon A-200SX
Canon USA Inc.
1 Canon Plaza
Lake Success, NY 10242
(516) 488-6700

List Price: With 1MB RAM, 40MB hard disk, 1.2MB 5¼-inch floppy disk drive, DOS 3.3, \$5,500, with EGA monitor, \$6,480.

In Short: Canon charges too much for this repackaged Acer 16-MHz computer. It's a fine machine, but Canon offers no expansion options and support is questionable. Buy an Acer instead.

Circle 46 on Reader Service Card

The Compaq Deskpro 386/25 and the smaller-footprint Deskpro 386/20e are top-of-the-line machines with Flexible Advanced Systems Architecture: the Intel 82385 cache controller is used to allow concurrent or simultaneous system-memory access and peripheral activity to achieve faster overall performance.

premium Compaq imposes is the cost of the Intel 80387 25-MHz math coprocessor. Other vendors sell the same chip for \$600 to \$1,200; Compaq's list price is \$1,899.

DESKPRO 386/20E The first thing you notice about this machine is its small-footprint case, approximately 6 by 16 by 15 inches (HWD). The beauty of this unit is that you have to give up neither your desktop nor expansion options.

The 386/20e contains four internal storage devices, although only three can have exposed fronts. An optional external ex-

since the 386/20e motherboard has built-in parallel, serial, and mouse ports, as well as floppy disk and hard disk drive controllers and a VGA adapter. The 175-watt power supply is more than sufficient for the slots, drives, and loaded memory.

The 32K of 35-nanosecond cache memory works with the standard 100-ns. memory chips to yield excellent performance; both processor and memory benchmark test scores were in the top quadrant of 20-MHz machines.

While you can certainly load up this small bucket with an impressive array of options, it can get expensive. The list price of the test configuration machine, with DOS, a 110MB hard disk drive, an 80387-20 math coprocessor chip, a second floppy disk drive, a 40MB internal tape backup device, a Compaq VGA monitor, and only 2MB of RAM, came to \$11,191—plenty there, but it doesn't come cheap.

DESKPRO 386/25 The 25-MHz Deskpro 386/25 is a full-size desktop machine with eight expansion slots and room for four storage devices, all of which can use removable media. Four devices for this machine may not seem like much until you look at the sizes of the 386/25's available hard disk drives, the largest of which is a whopping 300MB.

You can put up to 12MB of 100-ns. 32-bit memory on the motherboard before adding 4MB more onto a memory card. Compaq doesn't use RAM shadowing, but it does use memory interleaving to help performance. And the 32K of 29-ns. static

pansion chassis to handle 300MB drives is also available. And with 4MB of RAM on the motherboard and 12MB more on an expansion card, you can add up to 16MB of 32-bit memory.

Even after adding in the 32-bit memory card, you'll still have four 16-bit slots left. This is plenty for most people, especially

CIRCLE 387 ON READER SERVICE CARD

In Short: Compaq was the first on the market with a 386 computer and has earned increasing influence since. Compaq's experience and class show in both computers.

reviewed: the very hot 386/25, which can support 1.2 gigabytes of storage, and the small-format 386/20e, a dream personal machine. These are both terrific computers—it's a shame they have to cost so damned much.

RAM cache (operating under the 25-MHz Intel cache controller) provides zero-wait-state performance over 90 percent of the time.

In our benchmark tests, the 386/25 scored reasonably well compared with other 25-MHz 386s, but the narrow performance envelope in which these computers are competing tends to distort comparisons. As long as a computer falls within the normal range of scores in its class, which the 386/25 does, you're dealing with a very fast unit.

The test configuration machine had 5MB of RAM, an ESDI controller and 300MB hard disk drive, a 135MB tape backup unit, a 16-bit Compaq video adapter and monitor, and the 80387-25 coprocessor. The list price, including DOS, is a hefty \$21,614.

Turn your spreadsheets into all these charts with a single command: Call 1-800-426-7682.

For a limited time, you can get a free Graphwriter® II Autocharting Kit. Just call 1-800-426-7682 and ask for either AMS-2733 (5.25") or AMS-2738 (3.5"). The kit demonstrates how easy Graphwriter II can make it to create stacks of charts from your spreadsheets. And update them with a single command at DOS.

You'll find Autocharting is a real time saver, especially if your spreadsheet numbers are always changing. With Graphwriter II, you only set up your charts once. Updating is simple because the program gives you a direct link between your charts and your 1-2-3® or Symphony® files. Change your spreadsheet numbers and voilà, your Graphwriter II charts will automatically reflect the new data when you print them.

And the charts will always look terrific since Graphwriter II automatically adjusts their layout to accommodate changing data. So if, for example, you make a chart with a single bar for January sales, it'll still look good in December with year-end numbers.

The point is, Graphwriter II is the perfect software for creating charts for daily inventories, monthly sales, weekly interest rates, stock market fluctuations and everything else that constitutes periodic reporting.

Call the 800 number or send in this coupon today for your free Graphwriter II Autocharting Kit. Turning spreadsheets into charts has never been this simple.

Free Graphwriter II Autocharting Kit. Call 1-800-426-7682 and ask for AMS-2733 (5.25") or AMS-2738 (3.5"). Or mail this coupon to: Lotus Development Corporation, Department GW, P.O. Box 9158, Cambridge, MA 02130-9844.

It's hard to picture the average individual needing the performance of this machine, although those involved in engineering and graphics applications can use all the memory and speed they can get. More likely, this computer is best used as a network file server or for dedicated transaction processing.

Compaq computers are sold only through dealers; choose yours carefully, as it's up to him to support you for the 1-year warranty period. One drawback to Compaq's proprietary design and peripherals is that if something breaks, replacement costs are usually high.

However, given Compaq's increasing influence in its target corporate market (revenues roughly doubled in its last fiscal year), it appears that price is less of an issue than quality. And with the 386/25 and the 386/20e systems, the quality shines through.—Bruce Brown

COMPUADD CORP.

**COMPUADD 386/16
COMPUADD 386/20
COMPUADD 386/25**

In the past, mail-order computer firms competed solely on price, often at the expense of extra features and performance. But times have changed, and the smart mail-order companies, following the lead of companies like CompuAdd, now offer low-priced systems that are quality performers as well. CompuAdd's 16-MHz 386 has been on the market since early 1988, and this year the company introduced both 20- and 25-MHz 386 machines as well. Each system comes packed with features—and at prices that won't empty your savings account.

Like the 20- and 25-MHz systems, the CompuAdd 386/16 comes standard with

1MB of RAM, a 1.2MB floppy disk drive, and Western Digital ST-506 floppy/hard disk controller for \$1,895. Also included with each model are three accessible half-height drive bays and two internal bays.

We received U.S.-made Key Tronic 101 keyboards with our systems; they gave a good tactile response without annoying key clicks. Our test 16-MHz unit also came with a 71MB MiniScribe drive, a 14-inch Goldstar VGA monitor and an 8-bit Video Seven VGA board, but CompuAdd offers a multitude of drive and video options.

A CLOSER LOOK A reset switch, cylindrical system lock, and three LEDs indicating power on, hard disk activity, and speed mode are all situated on the front of all three CompuAdd units. The turbo light isn't used on the 16-MHz model, however, so without knowing otherwise you

BUYING SMART: THE RIGHT SYSTEM FOR YOUR NEEDS

God invented tourists, it's been said, because somebody has to pay retail. But no PC buyer should act as if he's on vacation when investing several thousand hard-earned dollars in a 386 system. Beyond Rule Number 1 of buying computers—"Never pay retail"—here are some other guidelines to keep in mind when you're shopping for a 386.

20 MHz is your best buy. When you're used to an 8-MHz AT, everything seems fast. But once you work with 16-, 20-, and 25-MHz 386 PCs, you'll notice three distinct tiers of performance. And you'll find yourself happier running your applications on something quicker than a 386-16.

Of the three, a 20-MHz 386 offers the best bang for the buck. You'll only save 10 to 15 percent dropping back to a 16-MHz 386. And 25 MHz, nice as it is, typically bumps the price up by a third (for instance, from \$8,000 to \$11,000 list for an IBM or Compaq system).

Case size. How many drive bays do you need? A small-footprint PC has three half-height drive bays stacked atop each other, a standard desktop has up to five,

and a tower offers six or more. Floppy disk drives are half-height, and hard disks are typically half-height through 60MB; full-heights are usually over 100MB. It's not unreasonable to equip a PC with two floppy disk drives, a full-height hard disk, and either a full- or half-height tape backup device. That's tower territory.

Tower PCs are neater because the jumble of cables is out of sight under the desk; my own PC has 14 cables. Between small-footprint desktop PCs (with disk drive bays one across) and wide-

body desktop PCs (bays two across), you'll find the extra width buys you marginally greater flexibility.

You need 3 to 4 free slots. What took a slot in your AT may well be on the motherboard in your 386, so pay less attention to total expansion slots than to slots free after you've accounted for memory, video, disk controller, and ports. Most users will want three free slots—for modem, network card, and bus mouse (if not located on the motherboard).

More than a few users will find the three free slots on an IBM Model 70 to be one too few, since one of the slots is for memory expansion. It's not inconceivable that you'll need space for a card controlling a scanner, a printer-speedup device, a second video card, or a CD-ROM drive. (Note: A single card controls both floppy and hard disks on ATs and 386 PCs with smaller, ST-506 drives. ESDI and SCSI hard disks typically require a separate slot for the controller.)

Buy 2- to 4MB of RAM. Even running DOS, 1MB of memory just isn't enough, as it hasn't been for most AT us-

could be fooled into thinking that you're always operating in slow mode.

You'll find the chassis on all the systems to be very flexible; when I moved the 16-MHz unit with the cover off (not a good idea), one of the boards came loose. But with the cover screwed on tightly, none of the boards came unseated during a move. Aside from the chassis, all the other components used in each model are well-constructed, brand-name items. All three machines earned an FCC Class B rating, making them suitable for both home and office use—no small feat for the price of these machines.

An Intel 80386 chip, rated at 16 MHz, is featured on the 386/16's Micronics motherboard. The motherboard also sports two 8-bit expansion slots, five 16-bit slots, and one Compaq-compatible 32-bit slot holding a Micronics 32-bit memory card. In the base configuration, only 256-kilobit

**Page-mode
memory is used
in the CompuAdd
386/16 to
achieve speedy
zero-wait-
state operation.**

DRAMs are on the motherboard; to back this up, 1MB of 100-nanosecond chips was soldered onto the memory card in the unit we received in the Labs for testing. If you'll be running OS/2 or any other mem-

ory gulper, a piggyback expansion card can bring the maximum installable memory to 10MB.

Both the Intel 80287 and 80387 math coprocessors are supported, but the 80387 requires a proprietary piggyback board from CompuAdd. The BIOS is the Award 386, Version 3.03.

Page-mode memory is used in the 386/16 to achieve speedy zero-wait-state operation. To speed up operation of the system and video BIOS further, you can specify 384K to be used as shadow RAM. While the processor and BIOS routines are chugging away at 16 MHz, the data bus always runs at a safe 8 MHz. For those picky network cards, an 8-MHz bus is a god-send.

The additional RAM and video options on the 386/16 we received brought the price up to \$3,917. But keep in mind that your dollars get you a fully configured sys-

ers. Get at least 2- to 4MB. In addition to the 640K for DOS, devote 1- to 2MB to a disk cache and/or RAMdisk. (Hard disk caching, the preferred route, improves the performance of any disk.) Use additional memory for expanded memory and to work under multitaskers such as *DESQview 386* or *Microsoft Windows/386*.

Hard disks. Disks are commonly rated by capacity (megabytes) and average access speed (milliseconds, or thousandths of a second). By way of comparison: XT's had 10MB 85- to 110-ms. hard disks; PC AT's had 20- or 30MB 40-ms. ST-506 hard disks.

For your 386, the smallest hard disk you should install is a 40- or 60MB 30-ms. hard disk. A better match for 20- and 25-MHz 386s would be a 90- to 120MB 20-ms. ESDI (Enhanced Small Device Interface) drive. Expect to pay \$750 to \$1,500 more than you would for the 40MB drive.

Get high-density floppies. If you opt for a 3½-inch floppy disk drive as your second drive, be sure to get the high-density 1.44MB drive rather than the 720K

drive. It costs only a few dollars more and writes 720K floppies reliably (unlike the 1.2MB 5¼-inch drives, which often have trouble with 360K floppies). Most vendors let you specify either 5¼ or 3½-inch drives if you equip your machine with only one.

Buy only VGA (or Super VGA). EGA is a dying video standard. VGA is good; Super VGA, better. Also called Extended VGA or VGA Plus, Super VGA has 800 by 600 resolution (VGA has 640 by 480; EGA, 640 by 350) and automatically runs VGA or EGA on programs lacking Super VGA drivers. Best of all, Super VGA costs only a few dollars more than VGA. While VGA is supposed to cost the same as EGA (we've been promised that for 2 years now), among companies that still sell both, an EGA board/monitor combination is \$100 to \$200 cheaper. Stick with VGA or VGA Plus.

Once the NEC-led Video Electronics Standards Association (VESA) consortium settles on one 800 by 600 standard, Super VGA will make even more sense to users. Boards supporting VESA will

likely work with far more software than nonconformers. And with luck, hardware upgrades should allow existing 800 by 600 VGA boards to speak VESA.

Monitor do's and don'ts. You don't have to buy your monitor from the company that makes your PC. Zenith's 1490 flat tension mask monitor is the best VGA monitor you can buy. Unfortunately, it cannot accommodate Super VGA. Among Super VGA-capable monitors, *PC Magazine's* Editor's Choice monitors are the NEC MultiSync Plus (\$1,399) and the Taxan MultiVision 770 Plus (\$915), with honorable mention to the \$699 Samsung Sync Master (see "Multiscanning Monitors for VGA and Beyond," *PC Magazine*, May 16, 1989). All are multisyncing monitors. As 800 by 600 takes hold, expect to see dual-frequency monitors that support both VGA and Super VGA. These should be cheaper than multisyncers. One of the first is NEC's MultiSync 2A, at \$799.

How good are IBM and Compaq monitors? IBM's \$685 8513, with a 12-

(continues)

■ 80386 DESKTOP PCs

tem, and the price is still well below much of the competition.

MORE FOR YOUR MONEY For \$4,858, only \$941 more than the cost of a fully configured 386/16, you can buy CompuAdd's midrange 386/20. The extra dollars buy you not only an increase in processor speed and disk storage (through a 70MB MiniScribe hard disk), but also a superb Zenith flat-screen VGA monitor, the 16-bit Paradise VGA, faster RAM, and one parallel and two serial ports on the motherboard. On top of that, you get a machine that was entirely designed and built by CompuAdd.

In fact, the new 386/20 and 386/25 models both have a CompuAdd motherboard with eight slots: one 8-bit, six 16-bit, and one proprietary 32-bit slot containing a CompuAdd 32-bit memory card. Unlike the motherboard on the 386/16, the CompuAdd motherboard has one parallel port, two serial ports, and an IDE (integrated

CompuAdd's top-of-the-line 386/25 (like its 20-MHz sibling) was designed and built by the company. To save slot space, the proprietary motherboard has one parallel and two serial ports, and a hard disk controller built in.

drive electronics) hard disk drive controller built in. These integrated features save you valuable expansion slots.

The 386/20 motherboard contains an Intel 80386 processor and an Austek cache controller with 32K of high-speed static RAM, both rated at 20 MHz. The cache controller enables the processor to operate at zero wait states. The motherboard also supports both the Intel 80387 and Weitek 3167 math coprocessor chips, which you'll need if you're running math-intensive programs.

Both newer 386s use the Award 386 BIOS, Version 3.04. Award's 386 BIOS performs memory diagnostics during start-up; it also includes a ROM-based setup that is accessed by pressing Ctrl-Alt-Esc at power-on.

To accommodate some speed-sensitive expansion boards, the bus can be set to 6.6 or 10 MHz using either the SETUP or SETSPEED program. Although some flexibility in bus speeds is allowed, some

(*"Buying Smart" continued*)

inch diagonal, is too small, and the 8512 (14-inch diagonal, \$595) is too fuzzy. If you have to pick one, take the 8513. Compaq's Video Graphics Color Monitor (\$699) is adequate. Some companies, especially direct-mail companies, offer two levels of VGA monitor; invariably, you should buy the more expensive one.

If you're on a budget, consider a monochrome VGA monitor. You get 64 shades of gray (great for desktop publishing) for about \$250. The same VGA card will drive a color monitor if you move up later.

Buy a 16-bit VGA card. Most makers offer three levels of VGA card: 8-bit bus, 16-bit bus, and 16-bit with costly, higher-speed VRAM memory chips. Then you'll have a choice of VGA (640 by 480), Super VGA (800 by 600), and in some cases super-Super VGA (1,024 by 768, the same resolution but not the same standard as IBM 8514/A), and 256- or 512K of video memory. Best bang for the buck: the 16-bit Super VGA version with 512K memory, which allows 16 colors at 800 by 600.

If you're sold on Super VGA, you should think twice about buying PCs with VGA on the motherboard. That includes all IBMs, the Compaq Deskpro 386/20e, Tandy 5000 MC, and many of the 386SX PCs. You may be able to disable or replace the VGA controller, but even if you can, you'll be paying twice for your video.

Get an internal modem. Allocate one slot for a 2,400-bit-per-second internal modem. A 2,400 is marginally more expensive than 1,200 bps now—100 percent more performance for 20 to 50 percent more money. Internal modems are cheaper than external and create less desk clutter, though it's true that you can't watch the status lights and you can't hit the modem power switch when you get in trouble. Keep your eye on single-slot 9,600-bps-fax-board/2,400-bps-modem combos. Before long, you'll see some for under \$500.

Mice and serial ports. You're going to be using a mouse sooner or later. The places to connect your mouse, in descending order of preference: a bus connection on the motherboard, a bus card,

and a serial port. If you choose Microsoft's best-selling mouse, a bus connection eliminates the need for Microsoft's dopey serial interface box. A bus card takes up a slot, so your best bet is a PC with a mouse connector on the motherboard. Why avoid serial mice? Most PCs have only two serial ports to share among as many as four serial devices. Cable swapping quickly becomes tiresome.

Questions about mail order.

Q: Are you using the manufacturer's specified hard disk? Sometimes it's replaced by someone else's drive, which isn't necessarily a drawback but costs the dealer less. There's no reason you shouldn't see some of the savings.

Q: Do you have a 30-day money-back guarantee?

Q: Do you have carry-in local service or on-site service? Shipping the PC back gets expensive. Besides, many "equipment failures" are nothing more than an incomplete setup.

Q: Do you charge extra for paying by credit card? Do you give a discount for cash? Mail order is extraordinarily ethical, but if you do run across scoundrels,

trial and error will be needed with older expansion boards that require a genuine 8-MHz bus.

A full 1MB of 100-ns. SIMMs comes standard on the memory card (although the evaluation 386/20 came with 2MB of 60-ns. SIMMs). On both the 386/20 and 386/25, RAM is expandable to a whopping 16MB using 1MB SIMMs. This should be plenty, even for the most memory-hungry applications.

TOP-OF-THE-LINE The 386/25 is CompuAdd's top-of-the-line PC, and when fully configured, it holds its own against some of the more expensive competition. Our evaluation unit had a 1.2MB floppy disk drive, a 320MB hard disk drive, a Zenith 14-inch flat-screen VGA monitor, 16-bit Paradise VGA, 4MB RAM in 60-ns. 256K SIMMs, 25-ns. static RAM in the cache controller, and one parallel and two serial ports. It was priced at \$8,290.

you have leverage via your bank if you avoid any discount for paying by bank check.

Q: What else do I need to buy? (Is DOS included in the price? Is the cable included if you buy a printer or modem? Are the toner cartridge and drum supplied if you buy a laser?)

Compare apples and apples. If you're proposing to upgrade your office to 386-based machines, don't make 286 PCs look unfairly cheaper when you compare the pros and cons. Too often, ATs are priced equipped with 30- to 40MB hard drives and 1MB of RAM, while the 386 you're comparing may be listed with a 60- to 110MB drive and 2- to 4MB of RAM. The real cost of a PC includes the base PC plus memory, a video card, monitor, hard disk, mouse, printer, network adapter card, software, blank floppy disks, training, and maintenance. Only the system unit (and to some degree the memory) costs more for a 386 than for a 286.—Bill Howard

Bill Howard is an executive editor of PC Magazine.

CIRCLE 401 ON READER SERVICE CARD

In Short: CompuAdd's 386/16, 386/20, and 386/25 are low-cost 386s from a mail-order company known for packing quality components into inexpensive machines. Although the benchmark test results did not stand out, each machine is a respectable performer with a number of video and disk options. The in-house-engineered 386/20 and 386/25 are a big step in the right direction.

On the inside and outside, the 386/25 is identical to the 386/20, with the obvious exception that its components are rated at 25 MHz instead of 20 MHz. Our benchmark tests show that some of the fastest disk times were turned in by the unit's 320MB MiniScribe drive; the 386/25 also sports fast video.

As in the 386/20, a division of the processor clock (25 MHz divided by 2 or 3) is used to govern the bus speed. In this unit, the data bus runs at 8.3 or 12.5 MHz.

CompuAdd should have gone the extra mile and included a separate, 16-MHz crystal on the motherboard to guarantee an 8-MHz bus speed.

CompuAdd's 386/16, 386/20, and 386/25 prove that you don't have to sacrifice performance and functionality when buying from mail-order companies. Nor do you have to take out a second mortgage when shopping for a 386.—Greg Alwang

COMPUTER PRODUCTS UNITED INC.

**CPU 386/20
CPU 386/25**

Great chefs never reveal their recipes, but the formula for a top-notch 386 is no secret. A fast processor, a static RAM cache, easy memory expansion, shadow RAM, and a compatible BIOS mixed in equal parts are the makings of a high-quality 386 machine.

Computer Products United, a California-based PC maker, has blended these requisite ingredients into its two competitively priced, first-rate 386s—the CPU 386/20, base-priced at \$1,895, and the \$2,295 CPU 386/25. The base system of each machine includes a Priam RLL controller, 1MB of RAM, a 1.2MB floppy disk drive, and one parallel, one game, and two serial ports.

CPU 386/20 Although you'd be hard-pressed to single out any one aspect of the CPU 386/20 that is extraordinary or truly unique, the system blends trusted components into a solid machine with reliable operation and better-than-average performance. On our benchmark tests, the system usually scored in the middle to high range of its class.

The CPU 386/20 wraps a 200-watt Astec power supply, a 5¼-inch, high-density floppy disk drive, and a conventional AT chassis around an American Megatrends AMI-386XT 20-MHz motherboard. Though the AMI motherboard would have fit into a smaller-footprint chassis, CPU chose to house it in a full AT-size case to allow space for up to four half-height disk drives. If desk room is a critical factor, you can order CPU's optional \$200 tower case.

To help make an XT-sized mother-

■ 80386 DESKTOP PCs

Computer Products United sells 20- and 25-MHz system parts from brand-name companies like AMI and Priam. The CPU 386/25 is further noteworthy because of its motherboard's ability to accept 8MB worth of both DIP and SIMM RAM.

board possible, AMI relegated all RAM to a 32-bit memory board that resides in the motherboard's proprietary 32-bit expansion slot. You can add a second megabyte of 256-kilobit chips to the base 1MB of 256-kilobit chips or use 1-megabit chips to pack up to 8MB on the card. At the expense of the adjacent 8-bit expansion slot, an optional daughtercard adds another 8MB, upping the system total to 16MB.

American Megatrends was one of the first independent 80386 motherboard makers, pioneering memory caching and ROM remapping (now dubbed shadow RAM). The CPU 386/20's large 64K static RAM cache effectively caches all memory installed in the system. The widely used and therefore time-tested AMI BIOS is famed for its handy inclusion of easy-to-use and comprehensive versions of both setup and diagnostics utilities. One of the few features missing from this motherboard is support for a Weitek math coprocessor to supplement its Intel 80387 socket.

The tested CPU 386/20, priced at \$4,575, included a rock-solid RLL Priam 70MB hard disk drive and controller, a soft-touch keyboard from Hi-Tek, a VGA video system, and 2MB RAM. With a computer this fast, you'll want to substitute a 16-bit VGA for the stock Video Sev-

en 8-bit Vega VGA. That's easy enough, as Computer Products United is willing to arrange substitution of a variety of components for the system's standard issue; CPU offers eight different hard disk options alone. You can even substitute a less expensive, slower motherboard (sans 64K cache) for the fast AMI model.

CPU 386/25 If you were impressed by the CPU 386/20's value, you'll find the CPU 386/25 an absolutely stunning deal. For \$2,455 more than the tested 20-MHz machine, the evaluated CPU 386/25 delivers the attributes of the lesser model plus a handful more, including comprehensive math coprocessor support for either an Intel 80387 or a Weitek 1167, a unique and flexible memory expansion scheme, an additional 2MB of RAM, and a 230MB Priam hard disk drive. Not only that, but our benchmark tests showcased the sys-

tem's muscular performance, marking it a strong contender.

The CPU 386/25's larger chassis, with its five full drive bays, barely restrains the American Megatrends AMI-386AT Mark II 25-MHz motherboard within. Like the motherboard on its less speedy sibling, this one also accommodates 64K of cache memory. The board's speedy 80-nanosecond system memory occupies sockets that can house either 256-kilobit or 1-megabit chips in DIP packs. That makes a total of either 1- or 4MB of memory, respectively. Four SIMM strips, also on the motherboard, hold either 256-kilobit or 1-megabit memory modules, too. The full complement of both DIP and SIMM RAM totals a grand 8MB on the motherboard. If that'll do, you can use the 32-bit memory expansion slot, which normally holds a second 8MB, as a standard 8-bit slot.

Only if you're flush with cash or restricted to buying from one of the well-known makers like IBM or Compaq should you pass up considering the CPU 386s. Bargain prices usually bespeak trade-offs, but the CPU 386/20 is precisely the sum of its highly regarded, reliable components, and the CPU386/25 delivers everything you'd expect from a top-flight, top-of-the-line desktop PC.

■ 80386 DESKTOP PCs

The Leo 386/16, from Computer Systems Corp., is an affordably priced, zero-wait-state tower system. The use of mostly standard components in a sturdy case is commendable, but the front-panel turbo and reset buttons look alike and are dangerously close to each other.

no more prodding than removal of the cover with the unit turned off. A call to the vendor's technical support at Computer Outlet, the Chicago-based retail chain that actually sells the machine, yielded no satisfactory answers.

Computer Systems Corp. also sells a 20-MHz version of the same machine (not reviewed here); a 25-MHz unit, expected to ship this spring, will feature cache memory. We can't predict if the 25-MHz model will be powerful enough to win favor among serious users, but if the muscle of the 16-MHz model is any indication, the Leo is not the one to lead the charge.

—Ilona Price and Edward L. Perratore

FACT FILE

Leo 386/16

Computer Systems Corp.
229 West Grand Ave.
Bensenville, IL 60106
(312) 595-2950
(800) 284-7746

List Price: With 2MB RAM, 1.2MB 5¼-inch floppy disk drive, \$2,499; with 80MB hard disk, monochrome monitor, DOS 3.3, \$3,565; with VGA monitor, \$4,125; with 40MB hard disk, \$3,825. 150MB hard disk, \$1,999; 60MB tape backup, \$815.

In Short: The Leo 386/16 zero-wait-state tower system showed some promise in benchmark testing, but technical shortcomings and design quirks held it back from real competition with the rest of the pack.

CIRCLE 406 ON READER SERVICE CARD

wan-based manufacturer. The BIOS is the trustworthy Phoenix, albeit more than a year old; the chip set is TTL. If you're looking to cut costs at the expense of a little speed, the board will accept an 80287 math coprocessor as well as the 387.

The slotted 32-bit memory is made up of 256-kilobit DIP, 80-nanosecond DRAMs that can be upgraded in 2- to 6MB increments to a 16MB maximum. Shadow RAM helps to quicken BIOS routines, but there's the usual catch: the upper 384K of your first megabyte is unavailable for other purposes, such as virtual disks.

In addition to the expansion slot devoted to memory, the Leo features another

32-bit slot, plus four 16-bit and two 8-bit slots (six slots remain after installation of a disk controller and video card). The 220-watt power supply is made by Power Tronic, and four AA batteries retain setup information in CMOS memory when the system is off.

Outside the machine are three switches for power on/off, turbo mode (the alternate speed is 6 MHz), and reset, plus a key lock. Don't try a quick switch into turbo mode, though, or you might find you've just reset the machine; the turbo and reset buttons are dangerously close to each other and look almost identical. A lip hanging over the A: drive interferes with quick access to the drive door when open. And the wobbly Enhanced-style keyboard from BTC is not the most comfortable on your fingertips.

AVERAGE TEST RESULTS The Leo had a few moments in the limelight by scoring in the top third on PC Labs' Extended Memory and small-record DOS File Access benchmark tests. Middle-of-the-road results marked most of the testing, although the system failed to rise from the depths in the 80386 Instruction Mix and large-record DOS File Access tests.

Another problem occasionally presented itself upon boot-up when the CMOS-stored setup returned to its default configuration and subsequently would not recognize the hard disk. Out of about 20 boots, this occurred twice after switching one video card for another; once it needed

CONTINENTAL TECHNOLOGY INC.

TOP GUN 386/20
TOP GUN 386/25

There are so many vendors making 386 compatibles these days that it seems as if they pull their company names out of thin air. In fact, Continental Technology may have done just that, and like the airline, it has made rock-bottom prices its key theme. The base price of the company's Top Gun 386/20 is \$1,750, and its 386/25 costs only \$150 more.

Both machines are assembled from a reasonable storehouse of parts, and our test units worked first time, every time. Our benchmark tests showed that the 20-MHz Continental computer, at least, ran at a respectable speed for its class.

ORDINARY EXTERIOR The external trappings of the machines hold few surprises. Both come standard with roomy desktop AT-style cases sporting the obligatory reset and turbo switches on the front panel. Both also include a 1.2MB floppy disk drive. There are no hard disk drives built into the standard configurations, but the company sells seven different hard drives made by either Kyocera or Seagate Technology. We received a 150MB RLL-coded Seagate drive on the faster machine and a 65MB Seagate on the 20-MHz unit.

Serial and parallel ports are optional and vary in cost from \$15 to \$30, depending on the I/O configuration. For a mere \$89, you get DOS 3.3 (albeit without doc-

How to tip the balance in your favor.

Introducing
one heavy-duty PC.

Processor: 80386

Speed: 25 Mhz

Memory: 2 Mb-16 Mb RAM

Total Slots: 8

PW² Series 300/10 80286 10 Mhz

PW² Series 500/12 80286 12 Mhz

PW² Series 800/20 80386 20 Mhz

Getting more from personal computing doesn't mean more PCs. It means balancing the right PCs with the right business solutions and connections.

PRESENTING THE RIGHT PC Our new PW² Series 800/25A starts with 25Mhz, 80386 desktop muscle. Up to 640 Mb of mass storage, cache memory, with tape back-up and VGA displays. And Windows/386 with MS-DOS to give you both ease of use and multi-tasking flexibility.

THE RIGHT BUSINESS SOLUTION The best solutions are created with specific businesses in mind. So

we offer you our dealer network to bring you custom-tailored software. A free book tells you who and where you can get everything from Distribu-

tion inventory control to Healthcare payroll applications.

THE RIGHT CONNECTIONS Unisys is an industry leader in networking. And that includes our PCs. With our USERNET², you can choose from Ethernet, Token Ring or simple twisted-pair wiring to communicate with minis, mainframes, or other PCs.

And don't worry. Despite all the added power, these are true PCs. So you can run MS-DOS, XENIX, and MS-OS/2 operating systems.

Call today for your FREE copy of the Unisys Guide to Marketers. Find out more about the new PW² 800/25A. And discover how one heavy-duty PC can tip the balance in your favor. Call 1-800-547-8362.

CIRCLE 246 ON READER SERVICE CARD

Continental Technology's Top Gun 386/25, as well as its 20-MHz counterpart, comes with a novelty item: a key-board with a "fill-in-the-strip" function template for entering the key commands of a program, and a numeric keypad-cum-solar-calculator.

umentation) and GW-BASIC. The vendor also said that *Disk Manager* is included if you buy a hard disk drive, although we did not receive it.

The Focus 3001 keyboard from Focus Electronic Corp. is the machine's novelty item. Not only does it have a "fill-in-the-strip" function key template to let you enter the function key commands for your favorite program, but the numeric keypad transforms itself into a solar-powered calculator. In theory, the solar calculator takes over when the machine is powered down. In practice, our fluorescent-lit PC Labs rooms didn't have enough oomph to charge the solar cell.

The system's Phoenix BIOS includes options to toggle on shadow RAM and select zero or one wait state. The other system components, which included the CTX International monitor, Tecmar VGA display adapter, Seagate hard disk drive, and Mitsumi floppy disk drive, all worked well. The DTC controller card uses 1:1 interleaving and Run Length Limited (RLL) coding (MFM—for Modified Frequency Modulation—is optional) for optimal speed. Also, the 230-watt Enhance power supply is a nice change compared with the 200-watt PC power supplies.

CLUES TO LOW PRICE The Intron/CTX motherboard appears to be well designed and installed; it hosts one proprietary 32-bit slot, four 16-bit slots, and three 8-bit slots. The motherboard also offers one clue as to why the price of at least the 25-MHz machine is so low. The CPU is an Intel Corp. 80386 20-MHz unit running above its rated speed. The benchmark tests are unaffected by allowing the slower processor to run at 25 MHz, but those who worry about reliability will remember that Intel guarantees its chips only when they are operated within the speed limit.

Another unusual feature on the motherboard is the use of space-saving DRAM-module SIP memory. Each machine comes standard with 1MB of SIP, expandable to 8MB on the motherboard. The 386/25 came configured with a heavy-duty 8MB on-board, configured as an SIP mod-

ule of 9 by 1 megabit; our 386/20 had 2MB—configured as an SIP module of 9 by 256 kilobits soldered onto the motherboard. In the latter machine, the SIP was stacked in four tall banks, creating a wobbling module and making it tricky to install full-length add-on boards in places where the SIP modules rose from the motherboard. The SIP modules used soldering rather than socketing.

While neither machine gave us any problems, talking to the vendor made us wonder about the possibility of receiving the same system components twice in a row. The company appears to sell you what's available on a particular day; during the course of our review, components changed: the 16-MHz CPU that was originally on the 386/20 was replaced with a 20-MHz version, and we wound up with different keyboards and monitors from those we started out with. The company also will negotiate prices with its customers. The bottom line? If you don't mind the flea market approach when purchasing a 386, you should do all right.

—Robin Raskin

In Short: The Continental Top Gun 386/20 and 386/25 are 386-powered AT clones that perform respectably for rock-bottom prices. Based on their parent company's CTX motherboard, the systems offer a wide range of accessories and upgrades and are expandable to 8MB of memory on the motherboard. Note that the 386/25 uses a 20-MHz processor.

CORDATA TECHNOLOGIES INC.

**CORDATA CS 5000
CORDATA CS 5000-2**

It's hard to make a 386 desktop PC that stands out in its class these days. Nearly everyone uses the same clone cases, the same keyboards, and sometimes even the same manuals. Not only that, but the actual system architecture of one company's product will more than likely resemble that of units from a hundred other manufacturers. But not so with the 16-MHz Cordata CS 5000 (base-priced at \$3,195) and the 20-MHz CS 5000-2 (\$3,995).

The most obvious difference between other clones and the Cordata models is the case. It is only about an 1½ inches narrower than a standard AT, but the front-panel styling helps it appear a little smaller. Two half-height drive bay openings show from the front, along with knockout panels for access to an additional two half-height bays. The front panel also sports a key lock, a hardware reset switch, and a three-digit display that shows CPU speed and

The most powerful hard disk ever released.

**Introducing Passport from Plus.
The portable hard disk.**

Until now, PC users who need removable mass storage have had to give up capacity, speed and reliability.

But now, there's a powerful removable hard disk with no compromises. Plus Passport[™], from the same people who developed Hardcard[™].

It gives you 40 or 20 megabytes of capacity. Along with an effective access time of 28ms. Which is as fast as the fastest 286/386 class fixed hard disk. With proven Winchester technology and 60,000 hour MTBF, it's three to five times more reliable than most other drives, removable or not. And with a shock rating of 150 Gs, it can take the bumps and grinds of the real world.

As a primary mass storage device for any PC/XT[™]/AT[™] class computer, or an IBM[®] PS/2[™] Micro Channel[™] System, Passport can be installed next to your floppy disk drive, or in a free-standing external chassis. Either way, it can be removed in seconds. Making data easy to secure. And easy to transport.

Call the Plus Product Support Line at 1-800-624-5545*. We'll send you a free applications guide and technical specifications.

CIRCLE 111 ON READER SERVICE CARD

The Cordata CS 5000-2, like the CS 5000, is unusually constructed: expansion slots sit beneath an aluminum cover that cuts down radio emissions, and RAM chips are under the right-hand disk bay. Both are difficult to access.

various diagnostic messages.

The real differences become apparent when you take the cover off of each machine. The cover itself is just a U-shaped panel that reaches halfway down the sides; when removed, the front and rear panels remain behind. Inside, you'll discover a sheet-metal box on the left, disk drives at the right front, and a power supply in back of the drive bays.

No expansion slots are visible; that's because they're resting beneath an aluminum cover (similar to one in the Sanyo MBC-18 Plus) meant to reduce radio-frequency emissions. From an engineering viewpoint, it looks like a nice feature. For the end user, it looks like a mistake. In order to take off this covering, you have to remove a screw deep inside the case; unfortunately, this screw also happens to hold down one end of the computer's speaker.

With the card-cage cover removed, you find six slots: one 8-bit and five 16-bit. This may seem unduly restrictive, but it's really not so bad. The computer comes with one parallel and two serial ports on the Cordata motherboard, as well as a floppy disk drive controller, so you need not give up slot space for these components.

The motherboard also contains the CPU and up to 16MB of 32-bit RAM—no need to give up slot space there, either. The test machines also came with a special card that combined both a hard disk controller and a VGA adapter, thereby taking up only one of the six slots.

HIDE-AND-SEEK The case layout has one more hidden drawback—literally hidden. The memory chips are secreted under the right-hand disk bay, and the only way to gain access to them is to take off the bottom half of the case and remove the motherboard. It's like having to pull off a car's front tire so you can change the oil. Suffice to say this is not an exercise that you would undertake casually.

The computers rely on Cordata's version of a Phoenix ROM BIOS, which includes a nice configuration setup program accessed with a Ctrl-Alt-S keystroke combination. The program is unusual in that it offers the advanced Chips and Technol-

ogies CHIPSet Feature Control utilities, which allow you to adjust wait states, BIOS shadowing, memory mapping, and even the precharge timing for the memory. These are handy features for making adjustments for different-speed chips and for tuning performance to optimal levels.

The 16- and 20-MHz test systems, list priced at \$5,734 and \$7,034, respectively, came equipped with 2MB RAM, a 1.2MB floppy disk drive, and a VGA monitor/card combination. A 40MB hard disk was included in the Cordata CS 5000, while its speedier sibling sported an 80MB hard disk. Both machines performed as expected for their class, roughly in the middle of the pack in most benchmark tests.

On the plus side, the case does offer some nice design features, and it has ample space and power to handle full-blown configurations. But given the difficulties involved in working on the insides of these machines, they are probably best suited for people who will put them in one place and leave them alone. Do not pick these systems if you frequently install different cards or change memory configurations.

In addition, the list prices for these two models are well above those of many good low-end machines. Given the quirky architecture and average performance, the Cordatas do not represent a compelling value.—Alfred Poor

CIRCLE #17 ON READER SERVICE CARD

In Short: Some nice design features are sandwiched in with some quirky architecture, making these systems best for users who will put them in one place and leave them alone, without trying to install cards often or change memory configurations. List prices are high; performance is average.

CORE INTERNATIONAL

CORE ATOMIZER 386/20 CORE ATOMIZER 386/25

If you break them down into their constituent parts, you'll find many common components in Core International's two systems. That's where the similarity ends. The base configuration of the small-footprint Atomizer 386/20—1MB RAM, serial and parallel ports, floppy/hard disk controller, and keyboard—costs a reasonable \$2,995. But if you need room for gigabytes of storage, the basic setup of the 25-MHz tower model, with 1MB RAM and a 1.2MB 5¼-inch floppy disk drive, may seem reasonable at \$6,495.

The motherboards in both review machines came populated with a 1988 American Megatrends BIOS, Chips and Tech-

For Data Communications Privacy...Just

Whisper™

**Introducing the first
PC communications program
with complete security!**

The use of personal computers to transfer sensitive information from one site to another is increasing every day. Yet a moderately skilled hacker can easily intercept or modify data sent over phone lines.

That's why Mika L.P. developed Whisper™

Whisper is the first data communications program optimized for security. It incorporates all the popular features you would expect to find in a data communications program, including file transfer, terminal emulation, scripting language, pull-down menus and more. Yet Whisper also provides DES encryption and message authentication—so you know your data is safe and private.

Flexible Security Features

Whisper's one-step encryption process makes private communications faster and easier than traditional multi-step approaches. And Whisper's message authentication and verification ensures that mail cannot be either fraudulently sent or tampered with during transmission.

Whisper encrypts just the data fields in a protocol transfer, leaving the frame intact. This allows you

to send secure information via intermediary non-secure systems such as electronic mail and BBS services. Whisper can also be used over "text-only" services such as Telex or MCI Mail™

Whisper incorporates many other security features, including multi-level encryption, key management, audit trails, SAA-like pull-down menus and much more. Of course, Whisper can also be used in "clear" mode without any security features.

Give us a call today. We'll show you how for just a little more than the cost of "standard" communications software, you can get all the same features plus the security and privacy of Whisper.

Mika,L.P.

1000 Holcomb Woods Parkway, Suite 324, Roswell, GA 30076

■ 80386 DESKTOP PCs

nologies chip sets, 25-nanosecond 96K caches, and 1MB of RAM (4MB for the 386/25), of which 384K is used to shadow the BIOS and video RAM.

An Everex Magic I/O serial and parallel port card, an 8-bit Paradise VGA card, and a Core ESDI RLL drive controller occupied three slots in the test unit. A 32-bit slot in each machine accepts a proprietary memory card that holds up to 8MB (32MB when 4MB chips become available).

Focus Electronics' mechanical Enhanced-style keyboard, a 1.2MB floppy disk drive, a Core hard disk, and a Mitsubishi VGA display completed each system. And Core throws in DOS 3.3, its own setup and diagnostic software, and 386Limit, a version of Qualitas's 386-to-the-Max expanded memory manager.

ATOMIZER 386/20 Core calls the Atomizer 386/20 its "baby AT," and at 14½ by 15½ by 7 (HWD) inches, the ap-

The Core ATomizer 386/20 and 386/25 both have plenty of room for expansion, with eight slots. But the baby-AT-size 386/20's three half-height bays pale in comparison with the 386/25's whopping ten half-height bays.

pellation is certainly appropriate. The price is relatively small, too: \$4,383 will buy the base configuration plus a high-density floppy disk drive of either size, a VGA card and display, and a 70MB Core hard disk drive. Our \$5,872 test configuration used 80-ns. static-column RAM SIMMs on the motherboard, a 90MB Core HC-90 hard disk drive rated at 16 milliseconds, and an 80387 coprocessor.

But expandability doesn't suffer at the expense of this baby's size. Though there's room for only three half-height drive bays, the machine boasts the same eight expansion slots found in its full-size brethren—six 16-bit, one 8-bit, and one 32-bit. The controller cables, however, obstruct a 16-bit card from fitting properly in the innermost 16-bit slot.

Power, reset, and turbo buttons adorn the front panel of the 386/20. The turbo button won't change your clock speed; you'll have to switch between 8 and 20 MHz using the keyboard. Unfortunately, a timing problem with the 10-MHz Core CNT-HCR controller renders the hard drive unreadable at 8 MHz—a problem the company claims to have corrected even as I write this.

ATOMIZER 386/25 Intended to house many megabytes, the ATomizer 386/25 sports a whopping ten half-height drive bays, three of which are exposed. If you need frequent access to more than three bays, you can leave the machine's front panel open. Four knockouts for any size I/O port augment the machine's capacity.

A setup consisting of the base configuration plus a 70MB Core hard disk, VGA card, and VGA monochrome monitor costs \$8,093. The 4MB of memory on the motherboard of our \$15,000 evaluation unit consisted of 80-ns. 256-kilobit DRAM DIPs; an additional 4MB of SIMMs can bring the total to 8MB on the motherboard. A 15-MHz Core CNT-ATP controlled the 17-ns. 650MB Core drive and the 1.2MB floppy disk drive.

Variable-speed dual fans in the 386/25 operate very quietly, working hardest at boot time, when they're needed most. Amenities include power, reset, and a similarly important turbo button on the front.

The keyboard feels comfortably clicky and comes with a flip-down plastic dust cover—a mild but easily removable nuisance. More disturbingly, the keyboard on the 386/25 sometimes locked up the system when bounced on my well-padded lap, and a Ctrl key on the 386/20 ceased to function after only a few minutes of use.

Core will configure its machines almost any way you want. Since the firm specializes in hard disk drives, it's not surprising that Core offers 34 combinations of hard drives ranging in size from 40MB to 1.3 gigabytes. A standard warranty covers 1 year's worth of problems with the system and 3 years' worth for the hard disk.

Both machines performed adequately in the benchmark tests. But while neither one of these ATomizers blows away the competition, they are well-built performers backed by an accommodating company. —Lori Grunin

DATAWORLD DATA
386-25

DataWorld has unleashed three disparate computers upon the 386 market: the DataWorld Data 386-16, aimed at the person seeking an entry-level 386 in a standard desktop unit; the DataWorld Data 386-20 minitower, for anyone who wants power in a small package; and the DataWorld Data 386-25, designed for those who require sheer power and expandability.

DataWorld prices its systems at the lower end of the spectrum: the 16-, 20-, and 25-MHz base units each come with 1MB RAM, 1.2MB floppy disk drive, ST-506 drive controller, parallel port, monochrome monitor, and Hercules-compatible card, for \$1,995; \$2,695; and \$3,695, respectively. A hardware reset switch, turbo light, and disk access light are also standard; all you need is a hard disk drive to complete each system.

The DataWorld Enhanced-style keyboard that comes with each computer includes a built-in dust cover that conveniently doubles as a data stand when flipped up. A mechanical click is sounded as each key is depressed; when typing rapidly, the noisy keyboard chatter may take some getting used to. An extra \$10 gets you the same keyboard with the *WordPerfect* command set printed on the function keys.

DATA 386-16 Even with additional options, the DataWorld machines are priced right. The 386-16 test unit had 2MB of RAM, a 44MB MiniScribe drive, one parallel and two serial ports, a Tatung VGA monitor, a 16-bit Paradise VGA, and DOS 3.3, all for \$3,853.

The AT-sized system offers the usual five half-height drive bays, with three accessible from the front. Its 230-watt power supply (found on the 25-MHz unit as well) includes four device connectors.

A Micronics motherboard featuring the

Phoenix BIOS Plus is used. The BIOS has a convenient ROM-based setup accessed at any time with the Ctrl-Alt-Esc keys.

No memory fits on the motherboard. Instead, the standard 32-bit memory card has space for 2MB of RAM in 256-kilobit chips; a daughtercard can bring the total to 8MB. System memory can be upped to 16MB through a special memory card that accepts 8MB of 1-megabit chips and a daughtercard that adds 8MB more. If the Data 386-16 is used as a network server, multiuser system, or in any other situation where memory requirements may grow substantially, you'll be wise to order the board that uses 1-megabit chips.

DATA 386-20 The Data 386-20 shipped to PC Labs was a stylish minitower, measuring 13 1/4 by 7 by 16 inches. It has a power switch and keyboard connector on the front, making it just as convenient to place beneath your desk as on top of it.

The Data 386-20 evaluation unit we received came with the same display and VGA card as the 16-MHz system, as well as 2MB of RAM, a 66MB RLL Toshiba hard disk, a Data Technology RLL controller, one parallel and two serial ports, and DOS 3.3 for a reasonable \$4,653.

This computer also packs five half-height drive bays. The space-saving 200-watt power supply has only three device connectors, so you'll have to choose your internal drives wisely.

The system contains an XT-sized AMI motherboard with the AMI 386 BIOS and a 64K direct-mapped memory cache using

25-nanosecond SRAM. ROM-based setup and diagnostics accompany the AMI BIOS, so you won't have to play with diskettes to change your configuration. A 32-bit card accepts up to 16MB in DIP packs.

If you've got touchy software that

Even with the cost of additional options, the Dataworld 386 machines are priced right.

needs to run at slower speeds, a key combination disables the cache, forcing the machine to run at one wait state, and can set the processor speed to 8 MHz. The turbo switches on the front of both the 20- and 25-MHz units are just for looks, but the turbo lights correctly display whether the processor is running at slow or normal speed.

DATA 386-25 The floor-standing Data 386-25 is a hefty number, weighing 47

The DataWorld Data 386-16 desktop machine and the Data 386-20 minitower include the usual five half-height bays. The Data 386-25 tower has plenty of room for expansion, with six accessible half-height bays and five expansion slots left over after adding in memory, controller, video, and I/O cards.

We're making some big waves in California

Introducing ALR's FlexCache™ 33/386Z

**33MHz 80386™
performance for
as little as \$3995!
7.481 MIPS-power meter V1.5**

ALR
California
Home of the World's First 386
Advanced Logic Research Inc.

Wipe out!

Hang on because ALR's latest addition to the FlexCache 386™ Z-family is cruising at an amazing 33MHz. That's a 20% increase in processing speed when compared to the award winning FlexCache 25386.

Fast Cache

With 32KB of cache memory, award-winning FlexCache architecture and our enhanced 16-bit super VGA controller you better be ready to move.

At prices starting as little as \$3995*, the FlexCache 33/386Z delivers the most performance for all power hungry desktop applications like CAD/CAM, desktop publishing or financial modeling at a very modest price. Of course the FlexCache 33/386Z is OS/2® compatible for tomorrow's latest generation of applications. The FlexCache 33/386Z as with all of the Z-Family comes packaged with PC-Kwik®, the award-winning disk caching utility.

With ALR's FlexCache 33/386Z you'll receive unbeatable support backed by an unprecedented three year factory warranty on the main system board, a one-year system warranty, unlimited technical support and optional on-site servicing from Intel.

For more information on the FlexCache 33/386Z call:

1-800-444-4ALR.

For more information on our other 33 MHz systems just turn the page.

CIRCLE 424 ON READER SERVICE CARD

In Short: The DataWorld desktop Data 386-16, Data 386-20 minitower, and Data 386 full-sized tower are all good values and faster performers from an up-and-coming mail-order firm. The 20-MHz minitower is an instant eye-catcher, offering functionality and expandability in a scaled-down, ergonomic case.

pounds and measuring 25¼ by 7½ by 17½ inches. With six accessible half-height drive bays, it has room for at least two full-height drives.

The system uses the AMI 386 BIOS and 64K memory cache on a full-sized AMI motherboard, which can accommodate 8MB of memory. Another 8MB can be added using a 32-bit memory card. The Data 386-25 tower offers an advantage by accepting both DIP- and SIMM-packed memory on the motherboard.

Like the Data 386-20, the Data 386-25 lets you disable the cache and reset the processor speed to 8 MHz to make use of cranky software.

In the large-sized 386-25, five expansion slots were still available after adding in a memory card, drive controller, and video and I/O cards. That's one more slot than is available to you after adding the same components to the DataWorld 16- and 20-MHz models. You can also plug an internal modem, network card, and fax board into the 386-25, and you'll still have two slots free.

The fully configured Data 386-25 sent to PC Labs was one of the least expensive 25-MHz units in this bunch. It came with 4MB of 80-ns. SIMMs, a 150MB Microplus ESDI drive, a Data Technology ESDI controller, a Video Seven V-RAM 16-bit VGA card, a NEC MultiSync Plus monitor, and DOS 3.3 for only \$7,594.

Our benchmark tests showed that the 25-MHz and 20-MHz units were generally solid performers, pulling in above-average scores. The 16-MHz system was somewhat slower, coming in at the low end of the midrange scores.

DataWorld includes the DCACHE disk-caching program (distributed by PC MagNet) and the host portion of Dynamic Microprocessor Associates' *pcAnywhere III* with each Data 386. The *pcAnywhere III* software is part of DataWorld's Remote Diagnostics Service. With *pcAnywhere* loaded on a customer's machine, a DataWorld technician can call and remotely diagnose or solve a problem. This remote service is in addition to the 1-year parts and labor warranty that comes with each machine. On-site service is also available at extra cost.

Each Data 386 comes with a short, illustrated manual that outlines setting up your PC, installing hardware options, and using *pcAnywhere*. Novice users will appreciate the 30-minute video that covers setup, hard disk management, and basic DOS commands.

The DataWorld machines have something for just about every 386 shopper. Whether you're looking for low prices, entry-level 386 computing, compact styling, or no-holds-barred expansion, one of these machines will suit your needs.

—Greg Atwang

DELL COMPUTER CORP.

DELL SYSTEM 310
DELL SYSTEM 325

Dell Computer Corp. is one mail-order firm that has been able to stand toe-to-toe with the big guys by offering quality computer systems and excellent support at reasonable prices. Its two 386 machines, the 20-MHz System 310 (base-priced at \$2,799) and the 25-MHz System 325 (\$4,599) reinforce Dell's commitment to compete at the high end of the PC market.

The machines, which can run at full processor speed or 8 or 4.77 MHz, resemble the original AT in appearance only. The front consists of three accessible drive bays on the right, with the power-on, disk activity indicators, and the system key lock on the left. Two of the drive bays on both evaluation units were filled with high-capacity floppy disk drives: one 5¼- and one 3½-inch. On the back are connectors for the space-saving parallel and serial ports built into the motherboard.

TESTED MODELS The units sent to PC Labs came with Dell's VGA Color Plus monitor and Video Seven VGA card. Both Dells also had the sturdy Key Tronic

Like the 20-MHz Dell System 310, the System 325 comes with Dell's VGA Color Plus monitor, a winner with a crisp display. The systems operate with less than one wait state, but were faster than many zero-wait-state units.

And they're getting even bigger

Introducing ALR's FlexCache™ 33/386

8.10 MIPS-power meter V1.5

Frankie Avalon

FOR
California
Home of the World's First 386
Advanced Logic Research Inc.

ALR's flagship product with the most powerful 386™ microprocessor, based on the award-winning FlexCache Series.

33MHz with 128KB of Cache

The FlexCache 33/386 is riding high at a full 33MHz with 128KB of cache. This is the one system that can beat the world's fastest award winning PC, the FlexCache 25386. In fact, it beats it by 25%. Now that's fast!

Proprietary FlexCache 64-bit Architecture

ALR's FlexCache 33/386 incorporates the proprietary award-winning 64-bit dual-bus cache design that allows the CPU simultaneous access to main and cache memory. This innovative design provides the most advanced solutions, including zero wait state performance 95% of the time. The FlexCache 33/386 is perfect for large multi-user networks. Not only is it the fastest 80386 based system, it offers the choice of 150-, 300- and up to 600-MB of disk

storage using high-speed 1:1 interleave ESDI controllers. Additional standard features include the super VGA controller with 800 X 600 graphics resolution and 2-MB of main memory. But there's nothing standard about ALR's commitment to quality, evidenced in our one-year factory warranty, unlimited technical support and on-site service available from Intel. For more information on the FlexCache 33/386 call:
1-800-444-4ALR

For more information on our other 33 MHz systems just turn the page.

FlexCache is a trademark of Advanced Logic Research, Inc. 80386 is a registered trademark of Intel Corp. IBM and Micro Channel are registered trademarks of International Business Machines Corp. CIRCLE 241 ON READER SERVICE CARD

■ 80386 DESKTOP PCs

101 keyboard, a delight to use as long as you don't mind having the function keys across the top. The evaluation 310, equipped with a 90MB Magnetic Peripherals hard disk drive and 4MB of RAM, goes for \$6,229. With an equal amount of RAM and a 322MB Micropolis hard disk drive, the evaluated 25-MHz machine came to \$9,130.

The Dell motherboard (OEMed from MicroWave) is garnished with the Chips and Technologies chip set and four sets of SIMM banks capable of handling 256-kilobit or 1-megabit SIMM packs. Although the SIMM and coprocessor sockets are easily accessible, the Intel 80386 and 82385 chips are buried underneath the left-hand drive bay. This is a problem only if you need to change them.

The systems use the Phoenix ROM

BIOS Plus (Version 1.1009 on the System 310 and Version 1.10 X48 on the System 325); this contains a ROM-based setup program which is accessed with the Ctrl-Alt-Ent key combination. Using the setup program, you can easily enable or disable the system and video BIOS shadowing.

Using 1-megabit DRAMs, the systems can hold 8MB on the motherboard for memory-intensive applications. If 8MB isn't enough, a proprietary 32-bit expansion card allows either unit to hold up to 16MB.

Dell uses both the page-mode and interleaving functions of the Chips and Technologies chip set as well as the cache controller (with 32K of static RAM) to speed up memory access. The company claims that the processors operate at "less than one" wait states, but our tests showed that the Dell machines are faster than many other 386s boasting zero wait states. The System 310 performed favorably on all the benchmark tests, indicating no weak or sluggish components. And the System 325's extremely fast conventional and extended memory times simply left other 25-MHz machines in the dust.

EXPANSION SLOTS Of the eight expansion slots (two 8-bit, six 16-bit) in each unit, two were given up to the Western Digital controller and the 16-bit video card. The 32-bit connector for the memory expansion card is located at the end of one of the 8-bit slots, making that slot good for only half-length cards. And if you're concerned about putting sensitive network cards into either Dell 386, never fear: the motherboard includes a separate 16-MHz crystal to maintain a constant 8-MHz bus speed.

Included with the systems is the Dell *System Analyzer*, a colorful diagnostics program with a menu-driven interface for testing memory, video adapter and monitor, keyboard, CMOS memory, DMA registers, hard disk drives, and parallel and serial ports. DOS can be ordered separately; with it, you also get the *PC-Kwik PowerPak* software with disk caching and the cursor speedup program *Cruise Control*.

Dell also offers a full year of free on-site service, but the machines we tested are of such high quality that repair visits

should be rare. This emphasis on customer service, combined with the speed, expandability, dependability, and competitive pricing, makes it hard not to like these two machines.—Greg Alwang

DESTINY COMPUTERS

DESTINY 386-16

DESTINY 386-20

DESTINY 386-25

Destiny Computers' 386s are available to the general public through dealerships only. The company prides itself on putting together its 386 product line—the Destiny 386-16, Destiny 386-20, and Destiny 386-25—with brand-name components in just about any configuration a dealer requests.

Fittingly, Destiny offers various video components, 16 hard disk options, 7 different keyboards, 7 case types, a Phoenix or Award BIOS, and controllers from several manufacturers. The 16-, 20-, and 25-MHz test configurations, priced at \$5,225, \$5,870, and \$7,000, respectively, are only a sampling of what the company can provide.

The three machines we looked at had a few features in common, including a Copal 1.2MB floppy disk drive. All used the Adaptek ACB-2322 ESDI controller, which can handle up to two floppy and two hard disk drives. They also included one of the two Wren III hard disk drives manufactured by Control Data Corp. The 386-16 and 386-20 had a 106MB unit, while the 386-25 came with a 182MB model.

A Trikon 102-key XT/AT switchable keyboard with a 9-foot cable was also supplied with each machine. While this keyboard has great audio feedback, it's too light and feels as if it could break easily.

All systems also come with a utility disk that lets you slow the processor to 6 or 8 MHz, increase the number of wait states from zero to one, and set up extended and expanded (LIM 4.0) memory.

While all three computers were engineered around Micronics motherboards, each system used a different model. The three boards have common characteristics, however, including an empty socket for the 80387 coprocessor. None of the moth-

- p-cad
- Sigma ARRS
- VersaCAD

Most major graphical interfaces including:

- Presentation Manager
- Windows 286, 386
- GEM/3
- Professional Graphics Language (PGL)

Intelligent Graphics Workstation

We've taken the FlexCache 33/386 with its powerful 33MHz processing, 128KB of cache, 64-bit proprietary cache design and integrated ALR's FlexCad graphics adapter. The FlexCad supports a resolution of 1024 X 768 non-interlace (flicker-free) graphics to bring you graphic capabilities beyond that of IBM's VGA. Plus we've combined the FlexCache 33/386 with ALR's QuickSync 50, 15" flat-screen

high-resolution automatic-scanning monitor to offer you the most powerful PC CAD workstation available, the ALR FlexCache 33/386W. Like the FlexCache 33/386 the 33/386 workstation supports Intel's 387™ or Weitek's 3167 to enhance calculating performance.

The Most Expansion Capabilities

The FlexCache 33/386W offers the most disk storage expansion capabilities. You can expand internally to 600-

MB just like the FlexCache 33/386. If that's not enough storage, how about 2.4 Gigabytes with the FlexStor 2.4G? And of course, the FlexCache 33/386W is supported by our one-year factory warranty, unlimited technical support and on-site service available from Intel. For more information on the FlexCache 33/386W call:

1-800-444-4ALR

CIRCLE 251 ON READER SERVICE CARD

■ 80386 DESKTOP PCs

Destiny Computers builds its 16-, 20- and 25-MHz units according to dealers' specifications. The evaluated Destiny 386-20, designed around an AMI motherboard, came in a small-footprint case. The 386-25 tower uses another AMI motherboard with Intel's cache controller.

boards will accept RAM directly, but instead work with various 32-bit Micronics memory boards.

Some of the memory boards are available with caching and can support up to 16MB of RAM. Each board also supports 128K of shadow RAM to speed up the operation of both system and video BIOS.

DESTINY 386-16 The small-footprint 16-MHz computer is based around the Micronics 386 system board and M200 main memory board. The memory board, which does not offer caching, was populated with 4MB of 100-nanosecond, 1-megabit page-mode DRAM, expandable to 8MB. Memory extension boards with 2, 4, or 8MB of additional RAM may be piggybacked onto the memory board.

Three of the test machine's eight expansion slots were already occupied—the 32-bit proprietary slot with the Micronics memory card, a full-length 8-bit slot with a video card, and a full-length 16-bit slot with the controller card. You're left with one half-length, 8-bit slot and four 16-bit slots, only one of which is full length. All five half-height drive bays are accessible from the front of the unit.

You'll find power and turbo reset switches on the front of the machine's attractive case. Although this may sound very convenient, only the reset switch really is. The turbo switch just turns the memory board caching on or off—no great help when you have a memory board that doesn't include cache RAM. And the location of the power switch is such that if you

accidentally bump your keyboard into the machine, you can easily hit the switch and turn the system off. I inadvertently did this several times while reviewing this computer, with disastrous results.

The system was shipped with a VIP CGA card and a Casper CGA monitor, which is nothing to get enthusiastic about. At least their presence proves that Destiny can supply you with a machine configured just about any way you could possibly imagine.

DESTINY 386-20 The 20-MHz member of the Destiny 386 family was packaged in the same attractive but functionally lacking case as its 16-MHz sibling. The unit was designed around the Micronics Baby 80386 system board and included the Model 400C main memory board. The memory board contained 4MB of 100-nanosecond, 1Mb page-mode DRAM and, to speed things up, an Austek cache controller chip that handles a four-way-associated 32K static RAM cache. This memory board can accommodate up to 8MB but doesn't support memory extension boards, as the M200 model does.

Of the eight expansion slots, two 8-bit and three 16-bit were left free. The main memory card occupied the proprietary 32-bit slot, the Adaptec controller card occupied the full-length 16-bit slot, and Genoa's 16-bit VGA card occupied another 16-bit slot. The system came equipped with the Relisys RE-9513 VGA monitor, which, though somewhat undistinguished, was nevertheless an improvement over the

CGA monitor combination shipped with Destinys 16-MHz unit.

DESTINY 386-25 Destiny's 25-MHz offering was housed in a nicely designed tower case with six half-height drive bays and reset, turbo, and power switches easily accessible on the box's front. It was designed around the relatively new Micronics 80386/25-MHz system board, which offers support for the Weitek 3167 coprocessor or coprocessor daughterboard, as well as Intel's 80387 coprocessor chip.

Unlike the Micronics motherboards in the other two Destiny computers, this system board has an Intel 82385 cache controller. The board comes with a 32K direct

N/A*—Not applicable: the tested system did not include extended memory.

N/A**—Not applicable: this machine's hard disk BIOS was not compatible with our test.

The **80386 Instruction Mix** benchmark test measures the time it takes to execute a selected series of processor-intensive tasks. The test program uses 80386 instruction code. These instructions are a subset of the total processor instruction set. The 80386 Instruction Mix implements a number of 32-bit operations. In the 80386 processor these become single instructions, whereas in the 8086 and 80286 versions of the benchmark test they remain multiple instructions.

The **Floating-Point Calculation** benchmark test measures processor speed by looping through a series of floating-point calculations, including multiplication, division, exponentiation, and logarithmic and trigonometric functions. The benchmark program uses the floating-point library included with Microsoft C Compiler 4.0.

The **Conventional Memory** benchmark test allocates 256K of conventional memory and treats it as a series of 64-byte records. Then, 16,384 random records are read into and written from this memory. The result shown is the average of the read and write times.

The **Extended Memory** benchmark test allocates 256K of extended memory and treats it as a series of 64-byte records. Then, 16,384 random records are read into and written from this memory. The result shown is the average of the read and write times.

The **DOS File Access** benchmark test measures the throughput rate of the disk being tested. In this case, throughput times are measured in terms of how long the disk takes to perform common DOS file-management functions. Five tasks—file creation, sequential file write, sequential file read, random file write, and random file read—are timed and the results summed.

The test is carried out for two different types of files—small-record files and large-record files—that are used by common PC applications. Files created using small records are typically used by database management programs, and large records are typically used for word processing and spreadsheet files. Loading a DOS program is also simulated by the large-record test.

The **BIOS Disk Seek** benchmark test measures the time it takes to do a random seek using the disk's ROM BIOS. The test result includes minimal software overhead and may not parallel the manufacturer's claimed average access time. The test program performs 1,000 seeks. The average result is shown in milliseconds.

Relative Times

(IBM PS/2 Model 70-E61 = 100)

At the lowest level of 80386-based computers—those with microprocessors running at a mere 16 MHz—a given benchmark test can reveal a great difference between the fastest and slowest machines.

Note the wide variety of results listed for the Extended Memory test, from the NCR PC916's 1.66-second flurry to the Mitsubishi MP386's 18.55-second trudge. Superior performance can be attributed to several factors: RAM operating in page mode, which is inherently faster than row addressing; an interleaved-memory system of 2MB or more; and/or RAM caching, implemented either through software or through special SRAM chips set aside for the purpose.

The great spread among 16-MHz 386s can also be seen in PC Labs' small-record DOS File Access test, where IBM's PS/2 Model 70-E61 took 77.61 seconds, while the Bus 386/16 chalked up a speedy 10.76-second score.

But appearances can be deceiving: the Bus 386/16, using a common but controversial practice, oscillates its 16-MHz microprocessor up to 20 MHz by means of a crystal. (Intel does not guarantee any chips when oscillated above their rated

speeds.) The Bus model also uses a nonstandard hard disk BIOS that buffers I/O and thus does not yield a meaningful data-transfer timing on our BIOS Disk Seek test. The same comment applies to the VIPC 386/16. (See the sidebar "Hard Disk Speed: The Cache Advantage.")

**HAVE
PRINTER,

TRAVEL.
KODAK**

Introducing the perfect companion for your laptop computer: the new Kodak Diconix 150 plus printer.

Hundreds of thousands of laptop users loved the Diconix 150 printer. Now there's a 150 plus. It delivers improved print quality, on plain paper, and is faster than ever. It's still the smallest, lightest, quietest printer in the world.

- Faster than ever—180 CPS.
- Improved print quality—even higher resolution and improved font design.
- Prints on plain paper.
- Improved paper handling, easily handles tractor feed and cut-sheet paper.
- So compact and light you can carry it anywhere—3.1 lbs.
- So quiet you can use it anywhere.
- The proven reliability you expect from Kodak.

The Kodak Diconix 150 plus printer. Now you can read what you write *before* you get back to the office. For details, and the name of your nearest dealer in the U.S. or Canada, call 1 800 255-3434.

Portable power for the printed page.

The new vision of Kodak

NOW SPEND LESS TIME KEEPING YOUR BOOKS — AND MORE TIME BUILDING YOUR BUSINESS.

Introducing Andrew Tobias' Checkwrite Plus™. Check to ledger to budget to tax category — in a keystroke.

"I spend too much time on bookkeeping!" That's the complaint we hear again and again from managers of growing businesses. And the reason we're introducing Andrew Tobias' Checkwrite Plus.

Checkwrite Plus makes check writing and bookkeeping faster and easier. When you write a check or receive income, your checkbook balance automatically knows, your budget automatically knows, your cash flow projection automatically knows, and the transaction is recorded in the proper tax category — all in a keystroke!

You can print a month's worth of checks in seconds and balance your checkbook in a breeze.

You can recall transactions by date, check number, amount, or payee — in about as much time as it takes to read this sentence.

You can manage your accounts payable and receivable, track and analyze loans, even print amortization schedules.

And with your financial data base at your fingertips, you can monitor and print essential reports like budget vs. actual spending, P&L, cash flow, and more — faster and easier than ever before.

More time to build your business

Checkwrite Plus brings your financial routine under time-efficient control. It pinpoints spending trends (and areas where you're overspending) which would take forever to uncover by studying your checkbook.

It gets you ready for your accountant (and saves you money on accounting time charges). But most important of all, Checkwrite Plus gives you more time to do the things you need to do in order to build your business.

Time-saving features the competition can't match

Only Checkwrite Plus is written by financial expert Andrew Tobias, whose make-it-simple style gets you started fast. (You won't even need the manual.)

Checkwrite Plus performs more bookkeeping functions than other check writing programs. It can handle multiple bank accounts, print invoices, and handle credit cards, unlike the leading competition.

Checkwrite Plus performs bookkeeping functions more thoroughly than other programs. You get income and expenses by tax category — not just a list. You get more complete budgeting and cash forecasting, and better graphics. Reports are a whole lot easier to create.

Checkwrite Plus is more flexible. You can quickly customize the program to meet your needs, right down to the check layout. (Our leading competitor locks you into his check layout.)

Want to export data to 1-2-3? It's free and easy with Checkwrite Plus. (The other guys charge extra for a transfer utility.)

And Checkwrite Plus easily exports to Andrew Tobias' *Managing Your Money*. (It's always nice to know that you can trade up to more comprehensive software without having to re-enter all your data.)

For Business People Who Write Checks

If you manage a small business, are an independent contractor, a consultant, doctor, property manager, or accountant, Checkwrite Plus will prove a valuable tool that frees your time. Its speed and simplicity make it great for personal use too.

Introductory Offer

For a limited time you can purchase Checkwrite Plus for only \$49.95. That's \$20.00 off the regular price of \$69.95. Act now!

Money Back Guarantee

If Checkwrite Plus does not make your check writing and bookkeeping faster and easier, return it to us within thirty days for a full refund.

After centuries of practice, mankind perfects engineering calculations: MathCAD.

Announcing MathCAD 2.5: The Dawn of a New Age.

What the historians will call it, only time will tell.

Perhaps the Century of Speed, or the Era of Ease. But whatever the name, this is the age of MathCAD 2.5, the only math package that looks and works the way you think.

MathCAD 2.5 includes 3-D plotting, HPGL sketch import, and PostScript output.

MathCAD is far and away the best-selling math package in the world. Because it lets you perform engineering and scientific calculations in a way that's faster, more natural and less error-prone than the way you're doing them now—whether you're using a scratchpad, calculator, spreadsheet or program that you wrote yourself.

And now we've made the best even better. MathCAD 2.5 is a dramatically improved version that includes three-dimensional plotting, enhanced numerical analysis, and the ability to import HPGL files from most popular CAD programs, including AutoCAD.* And now you can print on PostScript® compatible printers.

And like before, MathCAD's live document interface* lets you enter

equations anywhere on the screen, add text to support your work, and graph the results. Then print your analysis in presentation-quality documents.

It has over 120 commonly used functions built right in, for handling equations and formulas, as well as exponentials, differentials, cubic splines, FFTs and matrices.

No matter what kind of math you do, MathCAD 2.5 has a solution for you. In fact, it's used by over 50,000 engineers and scientists, including electrical, industrial, and mechanical engineers, physicists, biologists, and economists.

But don't take our word for it; just ask the experts. PC Magazine recently described MathCAD as "everything you have ever dreamed of in a mathematical toolbox."

And for Macintosh* users, we present MathCAD 2.0, rewritten to take full advantage of the Macintosh interface. Entering operators and Greek letters into equations is pure simplicity!

Look for MathCAD 2.5 at your local software dealer, or give us a call. For more information, a free demo disk, or upgrade information,* dial 1-800-MATHCAD (in MA, 617-577-1017).

**If you purchased MathCAD 2.0 between 5/1/89 and 6/16/89, you can get a FREE upgrade to version 2.5 (otherwise, the upgrade cost is \$99.00 until June 30, 1989; afterwards, the cost will be \$149.00).*

MathCAD®

MathSoft, Inc. One Kendall Square, Cambridge, MA 02139

map cache, with sockets for an additional 32K. Only one high-speed memory board option is available; it came to us with 4MB of 85-ns., 1Mb page-mode DRAM and can support an additional 4MB. The board's connectors allow for a daughter-board that can support another 8MB.

Three of the system's eight full-length expansion slots were occupied: the 32-bit slot contained the Micronics high-speed memory board, one 16-bit slot contained Genoa's 16-bit VGA card, and another 16-bit slot contained the Adaptek controller. Two 8-bit slots and three full-length 16-bit slots were left free.

In most of the benchmark tests, all three machines performed in the middle or at the high end of the curve in their respective classes. Much of this can be attributed to the solidity that comes from building a unit using high-quality parts.

Destiny offers free customer support and the standard 1-year parts and labor guarantee. But what makes the Destiny computers special is the custom-built touch. If you've always dreamed of owning a machine configured to your specifications, help is just a cooperative dealer-ship away.—Catherine D. Miller

EVEREST COMPUTER CORP. EVEREST BLOCK 320

Everest Computer Corp. sent us its XT-sized Everest Block 320, the fourth incarnation of its 20-MHz 386 system. For the bargain price of \$1,995, you get 1MB of RAM, a 1.2MB floppy disk drive, a floppy/hard disk drive controller, a monochrome adapter (but no display), two serial and two parallel ports, a CMP-Everest motherboard, and a AMI BIOS.

But before being swayed by the fairly low price, take care to note some of the machine's limitations. Block is an appropriate description of this system, which appears to set up barriers to expansion at every turn. The four 8-bit slots seem like wasted capacity on a 386 machine, and a wire terminal plug interferes with the proper seating of a full-length board in one of the four 16-bit slots.

A 200-watt power supply, a system capacity of only 8MB of 32-bit RAM (oddy

enough, you must choose between placing the memory on the motherboard or on a 32-bit card), the absence of cache memory, and a four-disk-bay capacity (three half-height accessible and one full-height internal) block any serious intentions of using this machine as a multiuser system or large file server. (You may find the optional \$150 tower case (not reviewed), which comes with 250 watts of power and six half-height bays, slightly more congenial in a server situation.) The FCC Class A rating means that home business users, a potentially important market, can forget about making these boxes their personal machines.

ENHANCEMENTS, ALTERATIONS

Among the enhancements made to this latest system is the introduction of surface-mount technology to the Chips and Technologies VLSI chip set. The change was made to fix contact problems that arose from the previous socket-mount setup. The addition of a 32-bit slot would have been a more praiseworthy feature if the slot had been used to increase overall 32-bit system memory to 16MB or more, rather than serving as an option for housing the 8MB of 32-bit RAM that the unit actually does accommodate.

Unlike the previous (and no longer available) Everest 386/20, the Block 320 does not run its microprocessor at a potentially dangerous 24 MHz, although you can buy a 24-MHz crystal to increase its speed.

The system comes set with zero wait states and a 10-MHz bus speed. As the latter may cause compatibility problems, you'll be glad for the opportunity to slow it down or set alternate wait states (one, two, or three) for individual slots. Of course, you'll have to be prepared to spend the time finding the right combination of bus and processor speeds and wait states.

The \$3,995 unit that we tested included a Seagate 72MB hard disk driven by an MFM Data Technology controller, a Genoa 8-bit Super VGA and, for some reason, a TECO EGA monitor. The test configuration, with the bus set to 10 MHz and running at zero wait states, produced only mediocre results on the benchmark tests.

New documentation is expected any day now, but in the meantime you can

The fourth incarnation of Everest's 20-MHz 386 system, the Everest Block 320, adds surface-mount technology to the VLSI chip set. A 32-bit slot has also been added to hold the 8MB of 32-bit RAM the system can accommodate.

amuse yourself with the spelling and syntax of the old one. An excerpt: "Almost the 386 System were presented on the Personal Computer Market, used the RAM card to install the 386 Personal Computer. This configuration, will cause several disadvantages when you install or assemble your Personal Computer."

There is not much to commend this machine: it's not very well designed and is

FACT FILE

Everest Block 320
Everest Computer Corp.
1153 Tansun Dr.
Sunnyvale, CA 94089
(408) 734-2604

List Price: With 1MB RAM, 1.2MB 5¼-inch floppy disk drive, \$1,995; with 60MB hard disk, monochrome monitor, DOS 3.3, \$2,899; with VGA monitor, \$3,608; with 2MB RAM, \$3,995. 1MB RAM upgrade, \$400; 150MB hard disk, \$1,200.

In Short: This machine is inexpensive, but not the cheapest 20-MHz unit you can find. Its poor design will make expansion difficult, rendering it unsuitable for many business applications, and its FCC Class A rating makes it an unwise choice for home use.

...and by ...

We Interrupt The War For This Im

To all those unlucky enough to be stuck smack in the middle of the current spreadsheet confusion, take heart.

There is, at last, a viable alternative to war: revolution.

One that delivers even more performance than you have (ahem) been waiting for, but without demanding expensive new hardware or extensive retraining. And without abruptly cutting you off from any user in your company, even those on mainframes.

The name of the spreadsheet is SuperCalc[®] 5.

And what it can do for you is, frankly, quite revolutionary.

Let's begin at the end. Stand-alone quality graphic capabilities have been built in.

Offering hundreds of presentation treatments from word charts to three-dimensional bar, pie, scatter, and polar graphs.

Present a slice of the art picture of your work.

	Month	Year	Cost	Profit	Net
Month	1981	1982	1983	1984	1985
Cost	100,000	120,000	150,000	180,000	200,000
Profit	20,000	30,000	40,000	50,000	60,000
Net	80,000	90,000	110,000	130,000	140,000

Link, not about everything in sight.

And with SuperCalc5, you select fonts, lines, boxes, grids and shading. All of which can be used to produce the highest quality customized reports.

Plus, SuperCalc5 actually makes productivity easier. An integrated Undo feature simply reverses unwanted commands. And a truly comprehensive system of debugging highlights costly errors and analyzes macro logic.

Perhaps even more impressive

Catch bugs before they come back to bite you.

is the way SuperCalc5 can link spreadsheets. Up to 255

N/A*—Not applicable; the tested system did not include extended memory. N/A**—Not applicable; this machine's hard disk BIOS was not compatible with our test.

The **80386 Instruction Mix** benchmark test measures the time it takes to execute a selected series of processor-intensive tasks. The test program uses 80386 instruction codes. These instructions are a subset of the total processor instruction set. The 80386 instruction mix implements a number of 32-bit operations. In the 80386 processor these become single instructions, whereas in the 80286 and 80286 versions of the benchmark test they remain multiple instructions.

The **Floating-Point Calculation** benchmark test measures processor speed by looping through a series of floating-point calculations, including multiplication, division, exponentiation, and logarithmic and trigonometric functions. The benchmark program uses the floating-point library included with Microsoft C Compiler 4.0.

The **Conventional Memory** benchmark test allocates 256K of conventional memory and treats it as a series of 64-byte records. Then, 16,384 random records are read into and written from this memory. The result shown is the average of the read and write times.

The **Extended Memory** benchmark test allocates 256K of extended memory and treats it as a series of 64-byte records. Then, 16,384 random records are read into and written from this memory. The result shown is the average of the read and write times.

The **DOS File Access** benchmark test measures the throughput rate of the disk being tested. In this case, throughput times are measured in terms of how long the disk takes to perform common DOS file-management functions. Five tasks—file creation, sequential file write, sequential file

read, random file write, and random file read—are timed and the results summed.

The test is carried out for two different types of files—small record files and large-record files—that are used by common PC applications. Files created using small records are typically used by database management programs, and large records are typically used for word processing and spreadsheet files. Loading a DOS program is also simulated by the large-record test.

The **BIOS Disk Seek** benchmark test measures the time it takes to do a random seek using the disk's ROM BIOS. The test result includes minimal software overhead and may not parallel the manufacturer's claimed average access time. The test program performs 1,000 seeks. The average result is shown in milliseconds.

Relative Times

(IBM PS/2 Model 70-121 = 100)

The 20-MHz arena appears to be a battleground for 80386-based machines, with a larger number of competing entries than you find in the 16-MHz or 25-MHz categories. While the various machine architectures run the gamut of possible speeds in the processor and memory tests, most appear to have targeted IBM's 20-MHz PS/2 Model 70-121 as the machine to beat—and in many cases have succeeded. Those vendors that surpassed the PS/2 on most of the tests include known entities like Compaq, Hewlett-Packard, and Tandon, along with lesser-known companies like Forten and Pan-United.

When studying the disk benchmark test results, keep in mind that most vendors offer hard disks in a range of sizes and speeds. For testing purposes, we used the hard disk supplied with the system we reviewed. Thus, for instance, if you consider the context of the BIOS Disk Seek test, the Arche Rival 386's 24.79-

millisecond score actually compares very favorably with the Acer 1100/20's 22.52 milliseconds. As the Summary of Features table shows, the Acer is fitted with a 159MB ESDI drive, which should have been able to beat the Arche's 66MB ST-506 drive by a wider margin.

Two of the candidates, the DataWorld Data 386-20 and the VPC 386/20, used a hard disk BIOS that proved

incompatible with our BIOS Disk Seek test. (See the sidebar "Hard Disk Speed: The Cache Advantage.")

Processor and Memory Benchmark Tests

Benchmark Tests: 20-MHz 386 Computers

limited in current capability and expansion capacity. It doesn't fit into the home business users' niche, nor is it a corporate server system.

An interesting aside is that Everest has chosen to pay royalties to IBM in a rollover response to Big Blue's lawsuit against all clone manufacturers.

—Kate Emery

EVEREX COMPUTER SYSTEMS

EVEREX STEP 386/16
EVEREX STEP 386/20
EVEREX STEP 386/25

Everex Computer Systems, a company known mostly for its peripherals, has been in the PC manufacturing business for 2 years now. But it is only within the last year that the company has begun selling its machines under its own label. The introduction of its 386 line, composed of 16-, 20-, and 25-MHz machines, ensures the company a place in the pace-setting pack that includes ALR and Dell.

The Everex Step 386/16, 386/20, and 386/25 (base priced at \$3,699, \$4,199, and \$4,999, respectively) are identical in most areas, from the proprietary Everex BIOS to the desktop-style chassis with five half-height drive bays and a 200-watt power supply to the excellent speed ratings achieved through the use of a proprietary caching system.

Of course, there were differences among the units we received for review. The Step 386/16 came with 2MB of on-board RAM (128K 35-nanosecond cache), an 80MB Seagate 4096 hard disk, an MFM-coded Scientific Micro Systems controller, a 1.2MB 5¼-inch floppy disk drive, one serial and one parallel port, an EGA monitor, and DOS 3.3, at a cost of \$5,337. Change the processor speed to 20 MHz, upgrade the hard disk to a 330MB CDC unit, substitute a Western Digital ESDI controller, up the on-board RAM to 4MB (64K 35-ns. cache), and raise the price to about \$10,547, and you get the Step 386/20 test unit. A similar configuration on the 25-MHz unit, with a 25-ns. cache, will run you \$12,047.

The front panel on each machine is a

graceful merger of aesthetics, innovation, and functionality. A smoke-colored plastic door slides away to display the eight-character LED control panel; its flashing indicator lights track bootup as well as drive, cylinder, and head access operations. The internal Power and Run LED indicator signals diagnostic information by changing colors: red indicates power-on; green indicates that the CPU is performing a calculation. Everex even added an on/off switch for the computer's speaker, especially handy when running particularly noisy applications.

A three-position hardware speed switch is also built into the front panel of the Step systems. When the switch is set to the top position, the systems run at high speed; at the low position, the 16-, 20-, and 25-MHz machines crank along at 5, 6.7, or 8 MHz, respectively. At the middle position, the system boots at high speed, although you can change it with a key combination or by using the utility program included.

There is room for up to 8MB of SIMM modules on the motherboard of each machine, so you may not need to load a memory expansion card, capable of adding an additional 8MB, into the 32-bit slot that comes standard. Five slots are free when a

The Everex Step 386/25, like its 16- and 20-MHz brethren, uses a proprietary caching scheme that gives a big speed boost without using superfast chips. Aesthetics and functionality combine in the front panel: a smoke-colored plastic door slides away to reveal an eight-character LED control panel.

floppy/hard disk drive controller, one serial and one parallel port, and a video adapter are installed.

INNOVATION WITH PURPOSE The Everex machines are full of innovations with purpose as well as flair. Most notable is the proprietary caching system that gives a tremendous speed boost to the machines without using superfast (and expensive) chips. All the systems came in very near the top of their classes on our benchmark

Everex 386s
are full of
innovations with
purpose as
well as flair.

tests; they achieved these ratings with 150-ns. chips in the 16- and 20-MHz machines and a 120-ns. chip in the 25-MHz box.

The company's proprietary caching scheme is an integral part of the Advanced Memory Management Architecture (AMMA), a memory management design similar to those found on minis and mainframes. The caching scheme works by fetching blocks of 4, 8, or 16 bytes of data for cache sizes of 64K, 128K, and 256K, respectively. You calculate your configuration's requirements by noting the number of memory banks you have filled: if you have only one bank of memory, 64K will be sufficient. For two banks, you will need 128K, and for four banks, 256K.

Everex's caching scheme gains some of its advantage by using a one-to-one mapping of main memory addresses to cache location. No overhead is wasted finding out where in cache a piece of information might be found. Lastly, with write-back rather than write-through caching, you will gain a performance advantage by not writing through to memory each time the cache is updated. Instead, AMMA waits until a cache location is going to be overwritten before writing back to RAM.

"Personally, if everyone was pushing me for laser quality, I'd go with Fujitsu. They've got everything you need—Adobe PostScript, upgradeability, affordability—the works."

Letters. Graphics. Desktop publishing. Where will you ever find one printer that can handle them all?

Right here.

It's the new RX7100 series of personal page printers from Fujitsu.

Take a look at the desktop-sized RX7100 model. Perfect for most of your printing needs, with HP LaserJet™ Plus emulation, dual paper bins and a one-piece toner and drum cartridge for ease of replacement. When it comes to paper handling, the RX7100 is a real pro, automatically feeding anything from envelopes to legal size paper from the same bin.

For true desktop publishing, the RX7100PS+ model adds Adobe® PostScript®, 35 resident fonts, 4 MB memory, HP LaserJet Series II® emulation with AppleTalk®, plus parallel and serial interfaces. So it's compatible with every system in your office, and then some.

The best part is, you can begin with the economical RX7100 and easily upgrade it to the top-of-the-line RX7100PS+ whenever you're ready.

Questions? Just call 1-800-626-4686.

Personally, we think everyone will thank you for it.

Fujitsu RX7100. The Personal Page Printer.

THE SIVA 386 20MHZ SYSTEM

delivering superior Quality, Performance & Value!

VNS includes many important options as standard: **\$1995**
40MB Hard Disk, 1MB Memory and more! Priced at

Complete System Features:

- 32-bit Intel 80386-20 CPU
- 1MB of 32-bit RAM on board expandable to 16MB
- 16/20 MHz keyboard selectable
- ST-251-1 Seagate 40MB formatted 28ms high speed, with ultra high speed controller 1:1 interleave
- 1.2MB high capacity floppy drive
- Super deluxe heavy duty tower case with 7 half-height drive bays
- High-resolution 12" non-glare amber display; Tilt and swivel base, Hercules-compatible Adapter
- 101 key enhanced keyboard; pleasant "Tactile-Click" feel
- 80287/387 math co-processors optional
- Fully compatible with virtually all XT/AT and 386 software

System Upgrades:

- VGA color upgrade — add only \$495
- EGA upgrade — add only \$395
- 80 MB — \$395
- Call for all other options and upgrades

Please call us for information on the great XENIX Software/SIVA 386 System offer.

NEW SIVA 286 20MHZ SYSTEM

\$1595

Complete System Features:

- CPU 80C286 at 16/20 with Zero Wait RAM
- Expandable to 4MB on board (STD 1MB)
- Award BIOS with built-in setup
- 40MB hard drive; 1.2MB floppy drive with high speed floppy/hard disk controller 1:1 interleave
- High resolution 12" monochrome monitor with tilt and swivel base
- Real time clock calendar with battery back-up
- On board 80287 co-processor socket
- 4-16 bit and 1-8 bit expansion slots available
- 2-Serial, 1-Parallel and 1-Game port
- 101 keyboard fully AT-compatible
- DOS, OS/2, XENIX-compatible

Call us for delivery details on the popular 12MHZ SIVA 286 Model 210 System at \$1295

In Short: None of these machines is cheap, but careful design and good construction make them well worth considering. The latest improvements made to all three include the ability to configure all hardware through setup software and the relocation of video BIOS to shadow RAM.

Remote Keyboard™

Talk to your customer instead of your computer

Control your IBM PC while you control your audience. All by yourself, you can give picture-perfect, PC-assisted sales presentations, make super group demonstrations, or even teach classes. In every case your attention will be focused on your audience, not on your PC.

The secret is Remote Keyboard... a hand-held control device for running and manipulating programs on your PC or compatible from as far away as 50 feet.

A fingertip touch on a button lets you display, alter or change data in the blink of an eye. You can roam the room, keeping in eye contact with your audience while controlling your computer with Remote Keyboard's infrared signals.

"It's neat," Remote Keyboard users say. They're right, too. It fits the palm of your hand and is UL-listed and FCC-approved. With Remote Keyboard, you don't need an aide at the keyboard. You're in control of the audience and your PC.

It installs in less than a minute — without tools! Even if you're all thumbs, Remote Keyboard is simple to install. It has just three components — your wireless, hand-held device, a receiver which plugs into your PC's serial interface, and a software driver on a diskette. Put it together, touch a button, and you're in complete control.

Pay more attention to your prospects, and sell more successfully! Remote Keyboard is a wonderful teaching tool, too, and a must for PC-assisted product demonstrations.

JUST \$395...30-DAY MONEY-BACK GUARANTEE...USE YOUR CREDIT CARD. This handy device is just \$395.00 plus \$5.00 for shipping and handling. It comes with a 1-year limited warranty. So put yourself in control...order RISK-FREE now by calling:

eo BIOS will join the system BIOS in being relocated to shadow RAM, which should improve the video refresh.

None of these machines come cheap, but if you've got a need for speed—as well as an eye for fine details and a well-thought-out design—you should take them into consideration. —Kate Emery

FIVESTAR COMPUTERS FIVESTAR MODEL 320

The 20-MHz FiveStar Model 320 from FiveStar Computers gets three stars. The \$2,049 base system comes in an attractive 43-pound case that holds 1MB of RAM, a 1.2MB floppy disk drive and controller, and an 8-bit I/O card with serial, parallel, and game ports. While none of this is out of the ordinary, upon closer inspection you will find perks that set the Model 320 a notch above the one- and two-star machines.

The USA-made Mylex motherboard sports the 256K AMI BIOS. This BIOS uses 128K more ROM than many other BIOS chips on the market. The extra ROM is used to house setup, diagnostics, and an

The FiveStar Model 320 uses the 256K AMI BIOS, which has 128K more ROM than many others. Part of the extra ROM houses an EGA BIOS that can be used in place of an EGA board, resulting in faster video speeds without RAM shadowing.

EGA BIOS. The on-board EGA BIOS, which can be enabled through a switch, can be used in place of an EGA board so that monitor instructions do not have to be carried over the slower bus. This results in much faster video speeds without RAM shadowing. If you have a VGA monitor-and-card combination, however, only the EGA functions will be speeded up. The motherboard will also support the Intel 80387 coprocessor, but not the Weitek modules.

The power supply is a 230-watt A-Matic with five power connectors. This will furnish ample power for the devices with which you can populate the five half-height bays (three of which are accessible from the front).

SPECIAL TOUCHES An FCC Class A rating makes it unsuitable as a home-office machine, but with options for a \$799 60MB internal tape drive and seven hard disks ranging from a \$500 45MB to a \$1,560 130MB unit, it would certainly be an adequate office engine.

Instead of the typical lithium battery, FiveStar uses a Dallas Semiconductor battery pack that contains the clock chip, battery, and CMOS in one small package the size of an EPROM. The Dallas pack can

be either soldered or plugged into the motherboard and is designed to last 10 to 12 years, compared with the 3-to-5-year life expectancy of most lithium batteries.

The \$5,424 evaluation unit we received came equipped with an 80MB Seagate hard disk, a second 1.44MB 3½-inch, 1.44MB floppy disk drive, a 16-bit Paradise VGA card, an Xtron multiscanning monitor, and 2MB of 32-bit RAM.

The maximum 32-bit system memory that the model 320 will carry is 16MB, with 8MB on the motherboard and another 8MB on a 32-bit card. The fast 80-nanosecond RAM combined with a 64K 25/35-ns. cache—the first 12K of cache memory is rated at 25 ns., the remaining at 35 ns.—helps the machine perform smoothly at 20 MHz with zero wait states. Through the keyboard you can select between zero- and one-wait-state operation, as well as 20- or 6-MHz CPU speed, and 10- or 6-MHz bus speed. In most of our benchmark tests, the machine ran respectably, coming out in the middle of the pack.

The FiveStar Model 320 is not the superstar that its name might indicate, but it is a solid machine with thoughtful extras, making it a sound investment.

—Kate Emery

FORTRON 386 25**

Fortron Corp. doesn't manufacture most of the components found in its three 386 systems, but the parts it does use are solid and its prices are attractive. Fortron's test selection included 16- and 20-MHz full-sized desktop units and a 25-MHz tower model, base priced at \$2,400, \$2,900, and \$3,900, respectively.

The cases that house the machines are all sturdy, with reset switches on the front and Fortron's own hefty 230-watt power supplies within. Each power supply has connectors for the maximum five floppy, hard, or tape drive units that each system can hold.

All three systems come with a Tatung Enhanced-style keyboard, a pretty good

Enable/OA overcomes the obstacles to true office automation.

If you start automating your office by looking at software, you may find yourself in a labyrinth. Start instead by looking at your office. What do you want your computer system to do?

True office automation incorporates the five essential tools of business: word processing, database management, spreadsheet, telecommunications and graphics.

These are the tools that bring people and tasks together and move data the way you want to move it, with greater productivity. It's called multitasking. And that's what Enable/OA will do.

Real multitasking under DOS now

Multitasking is the way you work. Data flow is dictated by project formats and schedules. That's how Enable/OA works. And it's LAN-ready, enabling every user to move data easily from file to file.

Users can view two or more files simultaneously, perform several tasks simultaneously. Data flows smoothly, seamlessly from one application to the next. You never leave Enable/OA.

Delivering the promise of OS/2

You don't have to wait for OS/2. Enable/OA delivers multitasking now, under DOS or OS/2 or Xenix. And it will be ready to perform with evolving operating systems and hardware technologies.

Enable/OA will even read and write to the leading dedicated software packages, protecting your present investments and files.

Widen the range of working windows

Windowing makes multitasking faster and easier. Enable/OA gives you up to eight windows simultaneously. You're never more than a few keystrokes from any application or any data you need.

Enable/OA lets you customize

The Enable/OA menu generator will customize your system. Macro facilities let you record keystrokes and commands as you use them to simplify complex tasks and applications.

Easy to learn, easy to use

All applications use the same commands and menus. On-screen help is complemented by complete, hypertext-generated documentation you can access any time—especially handy for laptop users.

Office automation with Enable/OA means:

- Better information management
- Comprehensive, professional reports
- Uninterrupted data flow
- Sophisticated spreadsheet analyses
- Superior multitasking and windows
- On-screen hypertext documentation
- Versatile graphics

Keying is believing

Touch F10, and you can begin using Enable/OA. To prove it, we'll send you a free demo disk and information kit showing how to escape the labyrinth and find the power of true office automation. For your copy and the name of your nearest Authorized Enable Dealer, call 800-888-0684, Dept. M.

enableOA™
Office Automation Software

Enabling America to do the job better.

■ 80386 DESKTOP PCs

model although some users may find that it feels a tad on the rubbery side. The machines also use a Western Digital floppy/hard disk controller with a 1:1 interleave.

Also standard are a 1.2MB floppy disk drive, a minimum of 1MB of RAM, and at least one serial and one parallel port. The best selection of standard equipment is found on the 16-MHz machine, which comes complete with 2MB of RAM and two serial ports.

Intel processor chips and system chip sets grace the motherboard in each machine. Fortron makes its own Intel-compatible motherboard for the 16-MHz unit but uses AMI motherboards for the 20-MHz and 25-MHz systems.

Important features of the Fortron 386 16, the Fortron 386 20 Plus, and the Fortron 386 25 are sturdy cases and hefty 230-watt power supplies with enough connectors for the maximum five storage devices. In addition, the 20- and 25-MHz systems offer cache memory.

CIRCLE 408 ON READER SERVICE CARD

In Short: Are you afraid you can't afford a mach-needed 386 machine? Fortron gives you some of the least expensive ways to get one while still using standard components.

These machines aren't terribly unique, but they're priced aggressively and come with a 1-year on-site service warranty.

FORTRON 386 16 The \$2,400 base price of this system is pretty seductive; even our test system, with a 40MB Seagate drive, DOS, Tatung VGA monitor, and 8-bit Everex VGA controller, is a good deal at \$3,465. Home business users who like the price will also be relieved to know that this system, unlike the other two Fortrons, garners an FCC Class B rating.

The system's Fortron motherboard is compatible with Intel's own and includes one parallel and two serial ports built in. Also on the motherboard is the Phoenix ROM BIOS and the 16-MHz processor chip, which can be throttled down to 8 MHz by using a keyboard combination.

Besides two 32-bit slots, you get two 8-bit and four 16-bit slots, running on an expansion bus controlled at a straight 8 MHz, a comfortable speed for older boards.

As with many other systems reviewed in this issue, base RAM is installed in 256-kilobit chips on a 32-bit memory card, which has a maximum capacity of 8MB, using 1-megabit chips. The addition of a second 32-bit card can bring system memory up to 16MB. If you think you're going to need all the memory you can get, it's probably better to specify 1-megabit chips at the outset.

The Fortron motherboard will accommodate more coprocessors than the AMI motherboards on their siblings. The full line—80287, 80387, and Weitek math coprocessor chips—is supported here.

Generally this machine runs at zero wait states, but you can change it to one

wait state through the setup program. There is no cache memory or shadowing of video and BIOS ROM, but a 2:1 memory interleave scheme is used to increase performance. Even so, the Fortron 386 16 wound up in the lower range of the mid-level machines.

FORTRON 386 20 PLUS The "Plus" in the system's name refers to the 64K of 29-nanosecond cache memory, run by an AMI K8 controller chip. The cache is a significant factor, helping the machine to score in the high range of the midlevel units on our benchmark tests.

The 20-MHz model has only one 32-bit slot for system RAM, but you can use it to install a single memory card that can cram 16MB—as much memory as occupied two 32-bit slots on the 16-MHz model. While both systems come with eight slots total, the ability to fit the memory onto a single card means you get more room for expansion in the 20-MHz system: six 16-bit and one 8-bit slot remain after boosting the memory to the max.

The expansion bus runs at an unalterable 10 MHz, so be careful about using older cards in this machine. If you need to put the brakes on somehow, the true 20-MHz Intel 80386 processor chip can be slowed to 10 MHz using the keyboard.

The AMI motherboard, which uses the AMI ROM BIOS chips, combines zero wait states, 1:1 memory interleaving, and both video and ROM BIOS shadowing. If you perform heavy math calculations, the

WORD IS OUT ON THE PC LINK-386!

"It takes everything I throw at it and comes back for more..."

Users Are Talking About PC LINK's 386-20 Computer. Winn Rosch from PC Magazine best described our computer when he said: "Upgrade an AT with the 20-MHZ 80386 system board, a 90MB high-speed ESDI hard disk drive, and high-speed VGA graphics, and you have an awesome computer competitor!"*

Compatibility

"It's so software and hardware compatible, it's incredible!"

— Pat Adams, DB Unlimited

Our PC Link runs the new generation of DOS, OS/2 as well as Windows/386, UNIX V and PC-MOS/386. It also welcomes off-the-shelf software and expansion boards including EGA adapters, modems, network cards and the Bernoulli Box. Your software and add-on investments are safe!

Quality

"The PC Link 386 represents the best of all worlds."

— Richard Hausman, Belding Heminway

We've assembled an all-star team of components for our computer which has a class B FCC certification. It features the acclaimed Hauppauge 386 MotherBoard (with one 32-bit, four 16-bit and three 8-bit expansion slots) and the Award Software Modular 386 ROM BIOS. We also boast Toshiba 1.2MB floppy disk

drives, a Western Digital controller, a NEC Multisync II display, and a Key Tronic keyboard. As one user said, we have "integrated the best of the best."

Speed

"...you've got the equivalent of a sixties streetcorner dragster..."

— Winn Rosch, PC Magazine

A powerful, 20 MHz zero wait state system, our computer is equal to the IBM PS2 Model 80. And faster. Because we've built in 1 MB of high speed RAM and a 387 math coprocessor socket. In relative terms, our 386-20 is 16.4 times faster than the IBM-XT. Think what this speed can do for your spreadsheet, desktop publishing and CAD/CAM applications!

Price

"We're delighted that we can afford...such high-performance machines."

— Denis During, Ocean Capital Corporation

Our computers start at \$1895 for the 16MHz system, and \$2295 for the 20 MHz system. And we back-up our products with a 1-year warranty on parts and labor.

You won't find better value anywhere. When the word on PC Link gets to you, believe it. Call: 1-800-221-0343.

PC LINK

PC Link Corp. 29 West 38 St., New York, NY 10018, In New York: (212) 730-8036

*Reprinted from PC Magazine, November 29, 1988 Copyright © 1988 Ziff Davis Communications Company. Trademarks: IBM PC, XT, AT, PS/2 and OS/2, IBM Intel 80386 Intel, Windows/386 Microsoft

■ 80386 DESKTOP PCs

motherboard on both this and the 25-MHz unit will take 80387 or Weitek coprocessor chips. Unlike their less-speedy sibling, neither of these machines can give the 80287 a home.

The test machine had 2MB RAM, a Seagate 80MB hard disk drive, and a Tatung 8-bit VGA card and Tatung VGA monitor. The list price for this configuration is \$4,795—very aggressive for this category.

FORTRON 386 25 The top-of-the-line Fortron 386 25 was impressive in its optional \$100 tower case. Even configured with 4MB of 80-ns. RAM; 141MB, 18-millisecond ESDI CDC hard disk drive and ESDI controller; 16-bit Video Seven VGA adapter and monitor; and DOS, the unit lists at just \$7,900. Eight thousand dollars begins to sound like pretty serious money, but other machines that suffer this much RAM and such a hefty hard disk

drive often cost half again as much, so keep reading.

As in the 20-MHz unit, the motherboard, ROM BIOS, and cache controller are AMI's; however, there are some important differences between the two units that are worth noting. Up to 8MB of memory, for instance, can be installed directly onto the 25-MHz motherboard in SIMM chip packs.

With an additional 16MB available through a memory card in the single 32-bit expansion slot, you can pack in a grand total of 24MB of 32-bit memory. Current versions of DOS and OS/2 can't use or get along with that much, but other operating systems can, and it's a good bet that someone eventually will figure out how to get DOS and OS/2 to work with that much RAM. Any user who was a Boy or Girl Scout will recognize the value of the motto "Be prepared."

The number and type of expansion slots

mirror those found in the 20-MHz system, but in this case the bus runs at 8.3 MHz, a fairly safe bet for most cards sold since 1985.

The 64K of cache memory on this machine is 25-ns., 4 ns. faster than on the 20-MHz computer. Additional speedups include programmable 1:1 memory interleaving and RAM shadowing of both video and ROM BIOS. Even so, the 25-MHz model was unable to burst ahead of the other middle-of-the-road performers.

Fortron offers the standard 1-year parts and labor warranty on all its systems, but it does so in a special way: all service is performed on-site by ServerNet, a nationwide contract service organization.

The Fortron 386s have good, standard components, speedy enough performance, and reasonable prices. Combine that with 1 year's on-site service, and the Fortrons come out as very attractive options.

—Bruce Brown

It takes a great performance for a disk to become a legend. Chuck Berry has what it takes. And so does PROCOMM PLUS. It gives you power and ease of use that surpasses communications software costing \$250 or more. Yet PROCOMM PLUS costs just \$39.00. Which simply means when you want communications software that gives you a great performance, you can still be good to your wallet.

LEGENDARY DISKS

Ask your software dealer today about PROCOMM PLUS, now available in stand-alone and local area network versions.

THIS IS WHAT HAP LET OUR CUSTOMERS

This is not exactly your typical dot matrix printer. But then, the ALPS Allegro 24 wasn't built in typical dot matrix printer fashion.

It's the result of a highly sophisticated new design process, never before attempted by any other printer company. We call it "Giving the Customers What They Want."

You told us you wanted a

rugged 24-pin printer for under \$500. Which the Allegro 24 is. You wanted it to churn out page after page of crisp, letter-quality output. Which it does. And you wanted it with easy-

to-use front panel controls. Which, of course, it has.

Then you insisted that it be jam-proof. Which explains this printer's uncharacteristic profile. You see, it has no platen. Just a unique flatbed design for a

OPENED WHEN WE DESIGN A PRINTER.

paper path that's straight, direct and virtually unjammable.

As if that weren't enough, you asked for—and got—features like “paper parking,” for automatic switching from fan-fold to single sheet feed. Four resident type fonts. And full compatibility with most all the PCs and software you already have.

For a free demonstration of the printer you've always wanted, see your local ALPS dealer. Or direct your questions, comments

and brilliant ideas to us at 800-828-ALPS. In California, 800-257-7872.

And help us design our next printer.

N/A*—Not applicable: the tested system did not include extended memory.

N/A**—Not applicable: this machine's hard disk BIOS was not compatible with our test.

The **80386 Instruction Mix** benchmark test measures the time it takes to execute a selected series of processor-intensive tasks. The test program uses 80386 instruction code. These instructions are a subset of the total processor instruction set. The 80386 Instruction Mix implements a number of 32-bit operations. In the 80386 processor these become single instructions, whereas in the 8086 and 80286 versions of the benchmark test they remain multiple instructions.

The **Floating-Point Calculation** benchmark test measures processor speed by looping through a series of floating-point calculations, including multiplication, division, exponentiation, and logarithmic and trigonometric functions. The benchmark program uses the floating-point library included with Microsoft C Compiler 4.0.

The **Conventional Memory** benchmark test allocates 256K of conventional memory and treats it as a series of 64-byte records. Then, 16,384 random records are read into and written from this memory. The result shown is the average of the read and write times.

The **Extended Memory** benchmark test allocates 256K of extended memory and treats it as a series of 64-byte records. Then, 16,384 random records are read into and written from this memory. The result shown is the average of the read and write times.

The **DOS File Access** benchmark test measures the throughput rate of the disk being tested. In this case, throughput times are measured in terms of how long the disk takes to perform common DOS file-management functions. Five tasks—file creation, sequential file write, sequential file read, random file write, and random file read—are timed and the results summed.

The test is carried out for two different types of files—small-record files and large-record files—that are used by common PC applications. Files created using small records are typically used by database management programs, and large records are typically used for word processing and spreadsheet files. Loading a DOS program is also simulated by the large-record test.

The **BIOS Disk Seek** benchmark test measures the time it takes to do a random seek using the disk's ROM BIOS. The test result includes minimal software overhead and may not parallel the manufacturer's claimed average access time. The test program performs 1,000 seeks. The average result is shown in milliseconds.

Relative Times

(IBM PS/2 Model 70-A21 = 100)

Speed is everything among the 25-MHz thoroughbreds of 386 technology. While disk access times will vary depending on the drive options you select for a given computer, the processor and memory test results represent the bottom line on machine performance. Extended Memory test times under 2 seconds, like those of the Acer 1100/25, typically result when the tested system uses memory interleave. Remember, however, that interleave is only effective when used with at least 2MB of RAM.

Considering IBM's past performance, we are surprised to find its 25-MHz PS/2 Model 70-A21 leading the majority of the contenders in this category. Only four machines—DataWorld, Northgate, Everex, and ALR—managed to best the Model 70's overall performance. ALR accomplished its superior position partly by boosting its operating speed to 25.3 MHz, 1 percent higher than the warranted speed for the 80386 chip it used.

As a rule, the faster the megahertz rating, the greater the likelihood that a manufacturer will use either an advanced ST-506 coding such as RLL or the faster ESDI or SCSI interface in its hard disk. One example is the Zeos 386-25, which scored a remarkable 10.34 seconds on the small-record DOS File Access test (thanks largely to its RLL encoding and 512K cache, which could not be turned off for testing). Compare this with the performance of Laser Digital's Pacer 386 25, whose ESDI drive took a full 51.44 seconds to complete the test, despite the speed advantage inherent in the ESDI data transfer protocol. In most cases, any exotic technology used is intended to overcome the slow transfer rate of a compatible 8-MHz bus.

The 25-MHz computers from VIPC and Bus, like the 16-MHz machines from the same companies, could not provide meaningful results for the BIOS Disk Seek test. Both used a hard disk BIOS that was incompatible with the PC Labs test, as did the Zeos 386-25. (See the sidebar "Hard Disk Speed: The Cache Advantage.")

FOUNTAIN TECHNOLOGIES INC.

FOUNTAIN 386/20 FOUNTAIN 386/25

Some of the less well-known clone vendors offer quality performance, parts, and workmanship at prices that rival the high-end, high-priced systems from top-of-the-line 386 manufacturers. Others come with some worthy features attached to a high price tag, but fall short in vital areas. Fountain's 386 line consists of two such machines.

Fountain's base configurations include 1MB RAM, a 1.2MB floppy disk drive, and parallel, serial, and game ports. The base prices are \$2,170 for the 20-MHz machine and \$4,030 for the 25-MHz model. The tested 386/20 and 386/25 configurations, with high-performance 150MB Toshiba hard disks, Visualpro VGA monitors, and 1.44MB floppy disk drives, as well as 4MB RAM in the 25-MHz unit, brought the prices up to \$5,190 and \$8,850, respectively.

Our test units also had a combination floppy/hard disk controller from Onit, capable of driving either standard ST-506 or ESDI hard disks. The brand and type of controller, like most of the other components (right down to the motherboard), vary according to the configuration you select.

OTHER FEATURES Other features of the Fountain 386s are typical of most clones: eight slots, a 200-watt power supply, and five half-height bays. Both models also have 101-key keyboards and use Phoenix's ROM BIOS. The BIOS includes a useful setup utility that can be called from the keyboard. Some handy software, including a proprietary expanded memory manager and *QA Plus*, a generic diagnostic and performance benchmark utility program, is thrown in for good measure.

The Fountain systems offered no speed surprises: they performed about as expected for machines of their respective classes. However, several construction flaws are inherent in the two machines. Parts of the casings on both units we received were bent and deformed because of the use of flimsy-gauge metal; the 386/20 even dis-

played a significant sag across the front, which bent the disk bays out of square.

In each machine, the mounting for the expansion card brackets was loosely riveted to the back panel at just three points. In addition, the power supplies had been poorly fitted; they could move up and down in their mounted positions. To add insult to injury, the fronts of the cases have openings for only two half-height drives, so you'll have to pull out a floppy if you want to add an internal tape drive.

The manual that comes with the 386/25 is based on the same text that accompanies the 386/20. Unfortunately, since both machines use different motherboards, buyers of the 25-MHz machine will find their manuals filled with misinformation. For one thing, the manual tells 25-MHz machine owners that the bus runs at 10 MHz when in fact runs at 8.33 MHz. Also, the instructions on using the CPU speed-changing utility are completely wrong for the 386/25.

The cheap construction and weak supporting materials overshadow the more minor flaws, including a key lock that is designed so that you cannot remove the key when the machine is unlocked and operating. The fact that the keys are cheap imitations of the IBM cylindrical key (both

Both the Fountain 386/25 and its 20-MHz sibling provide the requisite 8 slots, 200-watt power supply, and five half-height bays. The base price of the 25-MHz also includes 4MB of RAM. But flimsy-gauge metal casing and poorly fitted power supplies are problems.

CIRCLE 13 ON READER SERVICE CARD

In Short: The Fountain computers have their minor moments, but the poor attention to detail and less-than-helpful documentation put these machines out of the running for all but the most inattentive and self-sufficient.

machines came with keys that had the same serial number, and both could be unlocked by keys from other clones) means the security offered is a sham in any case.

The key lock also inconveniently doubles as a reset switch. This concept is potentially dangerous, since users who might choose only to lock their systems can easily turn the key too far, causing the machine to reboot and ruin operations that are in progress.

The bright spots in all this are the Hi-Tek keyboards. Both are quiet but have a rather good, stiff feel. I found the Enhanced-style 101-key layout on the 386/25 a bit nicer to use than the 386/20's standard 101-key configuration, although both could benefit from better keycaps.

Poor quality, incorrect information in skimpy documentation, and an absence of any really outstanding features make these computers less than attractive. You can do better elsewhere. —Alfred Poor

PRIMITIVE
Journal

"WE'VE GROWN DEPENDENT ON PRIMETIME, TO MANAGE OUR TIME."

-InfoWorld

Effective time management. Your success depends on it. So when InfoWorld, the

leading micro computer newspaper, endorses a time management software package, it's time for a

closer look.

Need another witness? PRIMETIME™ is "A better way to manage time," says *PC Magazine*. "Quite an attractive package. Buy it."

PRIMETIME is a personal project and activity manager. It blends together the most essential planning, scheduling and organization tools into one powerful action management resource.

PRIMETIME actually encourages you to get things done. You'll show up prepared and on time. And that will make you successful.

■ 80386 DESKTOP PCs

GENERAL TECHNOLOGY CORP. GENTECH 386

From General Technology Corp., a Rhode Island-based mail-order firm, comes the GenTech 386, base priced at \$1,799. While it's not the least expensive 386 we've seen, this unit falls comfortably at the low end of the price range.

The GenTech 386 is sold as a 16-MHz computer, but it's really not. For one thing, setting a jumper on CSS's zero-wait-state motherboard lets it run at 20 MHz—if you want to take the chance on pushing the 80386-16 chip. There's probably no reason not to try it this way, but even the conservatives who avoid running it at this speed will find themselves clipping along at a 16-MHz-plus pace.

Instead of using a 32-MHz clock crystal (which yields 16-MHz performance), the GenTech 386 comes with a 34.4-MHz crystal, giving you an uneven and unusual 17.2-MHz clock speed. While this "little boost," as General Technology calls it, certainly shouldn't strain the 80386 processor, the use of a nonstandard, undocumented component is a bit disconcerting.

The motherboard also includes the Award 386 Modular BIOS. Conveniently, you can put 4MB of 32-bit memory right

The GenTech 386, from General Technology Corp., is sold as a 16-MHz computer, but the use of a 34.4-MHz clock crystal boosts its speed to 17.2 MHz. Beyond that, you can set a jumper on the zero-wait-state motherboard to run the machine at 20 MHz.

on the BIOS. You can also purchase a memory card that will take 8MB of 100-nanosecond static RAM chips, bringing the total amount of 32-bit RAM to 12MB. If you want to use the full 16MB that DOS and OS/2 can handle, you'll have to rely on 16-bit memory.

FLOUTING THE STANDARDS The expansion bus speed is set at 8.58 MHz in normal operating mode. (With the machine set to 20 MHz, the bus runs at 10 MHz.) The 8.58 speed is another slightly off-standard number; it's probably okay in most situations, but if you're using older AT cards, this machine might not be able to handle them.

The base price includes 1MB of RAM, a Western Digital hard/floppy disk drive controller, a 1.2MB floppy disk drive, and two serial and two parallel ports. The standard keyboard is a Chicony unit with the usual Enhanced-style keyboard and an okay feel. The 16-MHz test configuration added a 40MB 28-millisecond MiniScribe hard disk, an 8-bit VGA card made by the little-known NSI Logic, and a VGA monitor from the equally unknown Imtec. The inclusion of some off-brand parts assuredly helps keep the list price of the test unit at an attainable \$3,053.

FACT FILE

GenTech 386

General Technology Corp.

205 Hallene Rd.

Warwick, RI 02886

(401) 732-5556

(800) 543-4302

List Price: With 1MB RAM, 1.2MB 5¼-inch floppy disk drive, \$1,799; with 40MB hard disk, monochrome monitor, DOS 3.3, \$2,425; with VGA monitor, \$2,850; 70MB hard disk, \$599; 90MB SCSI hard disk, \$859; 155MB ESDI hard disk, \$1,335; 1MB RAM, \$450.

In Short: Sold as a 16-MHz machine, the GenTech 386 actually operates at 17.2 MHz (or, by setting a jumper, at 20 MHz). The components are possible and the price is very good, but lack of FCC approval may prevent the manufacturer from selling this machine.

AST Takes 33 MHz, 386™ Power One Step Further.

From left to right:
33 MHz AST Premium 386/33
25 MHz AST Premium 386/25
20 MHz AST Premium 386C
16 MHz AST Premium 386/16
16 MHz AST Premium
Workstation 386SX

When you buy the 33 MHz, AST Premium® 386/33, you aren't just getting the fastest technology available in a desktop computer. You're getting it AST style.

Which means that in keeping with the AST 386 family tradition, we've packed several speed-enhancing features into the AST Premium 386/33. Such as zero wait-state cache, support for up to 36 MB of memory, support for 80387 and Weitek 3167 coprocessors, 16 ms hard drive access and more.

As a result, you'll be able to tackle a broad range of performance-sensitive and power-hungry applications both in single and multiuser environments, such as 3-D animation, geophysical simula-

tion, regression analysis, CAD/CAM and LAN file service.

And like the rest of the AST 386 family, the AST Premium 386/33 is backed

by the same commitment to quality, industry-standard compatibility and support that makes

AST a computer industry leader.

Of course, if you don't need quite so much power, AST offers several high-performance 386 and 386SX™ systems. Such as the 25 MHz, AST Premium 386/25 and the 20 MHz, AST Premium 386C for racing through technical and business applications.

And for an affordable entry into 386-CPU computing, try our true 32-bit, cache-

based 16 MHz AST Premium 386/16 and the small footprint AST Premium Workstation/386SX.

For name-brand systems that provide unbeatable performance, step up to AST. For more information, call us at (714) 863-0181 and ask for operator BB37, or use our Bulletin Board Service Number (714) 852-1872.

Lamark Software's 12 benchmarks — a generalized index used to compare one machine to another. The higher the number, the better.

■ 80386 DESKTOP PCs

One very negative note is that, as of this writing, this machine has not yet received FCC approval, even for Class A use. According to General Technology, that approval is pending.

General Technology's use of some nonstandard components and off-brand names isn't necessarily bad, but that combined with the lack of FCC approval for this machine is enough to make us hesitate.

—Bruce Brown

HERTZ COMPUTER CORP.

HERTZ 386/16
HERTZ 386/25

Hertz aims its products at the value-added-reseller market and large corporate clients; reliability and quality are its sales tools. The two 386 machines we received—the 386/16, base priced at \$2,695, and the higher-speed, \$4,995 386/25—exemplify the company's commitment to engineering dependable, if not lightning-fast, systems.

Intel, an industry leader if ever there was one, makes not only the chips and the motherboard, but also the power supply and chassis. The BIOS is from the ever-capable Phoenix, and equally reputable companies supply most of the other components.

The Intel motherboards are eight layers deep, large enough to accommodate the esoteric logic that the manufacturers of motherboards with fewer layers must leave out. Although most commercial programs do not require this logic, its presence gives value-added resellers the opportunity to write software that makes use of it. It also means that these systems will run anything ever written for the 386 processor.

Speed is a secondary consideration for these machines, so it's no surprise that neither really shone on our benchmark tests: the 16-MHz unit compared more favorably to those in its class but had noticeably low scores on the Conventional and Extended Memory tests. The 386/25's test system scored poorly on the processor tests, but its ESDI Western Digital controller and 330MB Micropolis hard disk helped it do better in the File Access tests.

Both machines are roomy enough for the standard five half-height bays and a 220-watt power supply with five connectors. In addition to the 2MB of RAM, controller, 1.2MB 5¼-inch floppy disk drive, and one parallel and two serial ports included in the base price, the systems we received each sported a 1.44MB 3½-inch floppy disk drive, a Hertz multiscanning monitor, and Video Seven's 16-bit VGA card, as well as Hertz's own keyboard, which gives you good, crisp feedback.

HERTZ 386/16 The 16-MHz 386, at 16½ by 21 by 6½ inches (HDW), is about the same size as a PC AT; the strong metal case helps it earn an FCC Class B rating. On the 386/16 as well as the 386/25, power and disk access are indicated by LEDs on the front panel; there are no buttons to reset the machines, and switching to 8 MHz can be accomplished only through software.

The zero-wait-state 386/16 comes standard with the maximum 2MB of 100-nanosecond RAM in SIMM packs on the motherboard and eight expansion slots, two of which can accommodate either 2MB or 8MB 32-bit memory boards. Four 16-bit slots also come standard; in the \$4,495 system we received, one of these slots was filled with a Western Digital

The Intel name graces not only the chips and the motherboard, but also the power supply and chassis of the Hertz 386/25 and the 386/16. An eight-layer motherboard accommodates the esoteric logic that manufacturers of motherboards with fewer layers must leave out.

List Price: With 1MB RAM, 1.2MB 5¼-inch floppy disk drive, \$4,995; with 40MB hard disk, monochrome monitor, DOS 3.3, \$5,495; with VGA monitor, \$5,995; with 4MB RAM, 330MB hard disk, 1.2MB 5¼-inch and 1.44MB 3½-inch floppy disk drives, \$9,995. 1MB RAM upgrade, \$475; 60MB tape backup, \$750.

CIRCLE 547 ON READER SERVICE CARD

In Short: The Hertz 16- and 25-MHz machines are ones to look at if your priorities are dependability and reliability rather than blinding speed. Their Intel motherboards are eight layers deep, large enough to give value-added resellers the opportunity to write software for them. Also, it means that these systems will run anything ever written for the 386 processor.

modified-frequency-modulation (MFM) controller for the 72MB Micropolis hard disk. Two additional slots were taken up by the video board and parallel and serial ports, leaving one 16-bit and two 8-bit slots available for further expansion.

HERTZ 386/25 The 386/25, also a Class B-certified machine, is 2 inches deeper and slightly more rigid than the 386/16. The motherboard on the zero-wait-state unit nearly mirrors that found on the 16-MHz machine, except that it offers an additional serial port and can pack up to 8MB of RAM. With 5MB RAM, the price of the tested system rose to \$10,470.

The slot configuration differs a bit from the 386/16: with the 25-MHz machine, you get the 32-bit slots, as well as one 8-bit

NORTHGATE Defines *Elegance*™ as

Northgate Proudly
Announces
Sorbus™
A Bell Atlantic™ Company
Nationwide Independent
Computer Service
is now included at
~~no extra cost~~ to the owner—
with every NORTHGATE
COMPUTER SYSTEM.

A Totally New Lineup of Five 80386-Class SuperMicro Computers *Redefining the Standards For Power Computing!*

**FASTEST 386 EVER!
UP TO 16 MEGABYTES OF
MEMORY. A 256KB READ/
WRITE-BACK CACHE. UP TO
1.2 GIGABYTES OF SCREAMING-
FAST HARD DRIVE STORAGE.
16-BIT VGA DISPLAYS. THE
OMNIKEY KEYBOARD.
AND CABINETS LIKE
YOU'VE NEVER SEEN BEFORE.
SIMPLY...**

*If you need the ultimate in pure computing power,
blended with every imaginable convenience and utility
feature, Northgate's all-new Elegance Series is for you—
AT PLEASINGLY LOW PRICES!*

■ **At the top of the line—the Elegance 3000.** It's housed in a deluxe floor-standing cabinet with space for 10—Yes 10—half-height storage devices, with a tinker-proof locking, full-length front door panel. 250-watt dual fan power supply with thermistor sensor to automatically control ventilation requirements.

Just try filling the drive slots. Northgate gives you both 1.2 and 1.44 floppies standard. Hard drive selection is up to you. From our 80MB SCSI with 17MS speed to dual 600MB SCSI or ESDI drives for a maximum capacity of 1.2 gigabytes. Plenty of space left over for more floppies, optical drive, tape backup, etc.

■ **Inside lives the lightning!** The 16 megabyte capacity motherboard is hyper-enhanced with up to 256 Kbytes of 30 nanosecond cache. But it's not just a read cache as with most systems. Our engineers have added to a write-back algorithm that adds another boost to the already scorching processor power.

Recalculations of even the biggest spread sheets are amazingly quick. Large databases are short work with Elegance. CAD drawings appear as fast as you can release the ENTER key.

And if you're tired of going out to lunch while a desktop publishing or graphics program struggles through your current system, *Elegance will put you on a diet!* The speed of these systems cannot be believed without experiencing it for yourself.

Northgate will custom configure your Elegance System to your own needs. Options include 16-Bit VGA displays, tape backups to 150MB, a huge range of hard drives, network software and hardware, laser printers...just call.

Yes, Elegance Systems are not for everyone. Northgate has a broad line of top performance systems to meet any computer need. Our 286 family includes our PC Magazine, Editor's Choice 286/12 and both 16 and 20MHz complete systems. Northgate's entry level 386 system is our 16MHz selling for just \$2499.

Whatever your computer needs, you're further ahead with Northgate. Backed by our unique OVERNIGHT PARTS REPLACEMENT POLICY and supported by the industry's most qualified technical support staff, Northgate is truly "The New Leader in State-Of-The-Art Power Computing."

**Elegance Systems prices for 20MHz complete systems start at \$3,299.
For 25MHz systems, prices start at \$3,899.**

Regis McKenna

Age: Old enough to remember the day that Intel Corporation was founded.

Profession: Chairman of Regis McKenna Inc., a major marketing company based in "Silicon Valley." A general partner in the venture capital firm of Kleiner Perkins Caufield & Byers. Author of the Regis Tauch and most recently, *What's Afraid of Big Blue?**

Hobbies: Enjoys doing extensive research on innovative new technologies. He recently became involved in building and archiving an extensive database, using state-of-the-art page recognition software.

His Page Recognition Software: OmniPage of course. According to Regis: "OmniPage represents one of the most complete page recognition software products; providing incredible flexibility to customize data which can be easily accessed later. All of a sudden the cost of archiving and retrieving data has dropped significantly. The 'Information Age' is upon us and we have an exciting new tool!"

Favorite Quote: The New York Times: "OmniPage could be the most significant advance in personal computing this year."

Things Disliked Most: "Technology that is not easily accessible or powerful enough to serve the needs of people."

Favorite Scent: "I'm using OmniPage to build an extensive electronic library that pertains to the growth and evolution of technology over the past 25 years. Being able to scan literally any article, regardless of layout or column format, has suddenly made this all possible. It's eliminated the labor intensive task of data entry. I'll be able to share this information with employees, customers and colleagues over time. It's an exciting collection of business case studies for future reference."

Future of Page Recognition: "OmniPage has provided me with the customizable tool that I need. I can use the Partial Page feature to scan only that text which is relevant to my needs. Having a version that runs in MS-Windows should impress those who are committed to that environment. What we're seeing here is the emergence of a new product category."

CAERE™

■ 80386 DESKTOP PCs

and five 16-bit slots, obviously a preferable combination. A few additional perks—like a real-time CMOS clock chip with an integral lithium battery, room for 24MB of RAM, and 64K of fast cache memory using 35-ns. chips—are also included with this machine.

The 386 chip on this system also has a heat-sink positioned above it and an extra fan for more cooling capacity. These provisions for greater cooling capacity are necessary for anyone who has the full 24MB of RAM operating at 25 MHz. Like the extra-rigid chassis, the extra fan will increase the longevity of the machine, especially in hostile environments.

The price of the 25-MHz unit also includes on-site support service from Intel. An on-site contract can be bought for the 16-MHz model for prices ranging from \$325 to \$600. Overall, the Hertz machines are ones to look at if your priorities are dependability and reliability rather than blinding speed.—Kate Emery

HEWLETT-PACKARD CORP.

HP VECTRA QS/16
HP VECTRA RS/20
HP VECTRA RS/25C

Hewlett-Packard has been in the personal computer business since 1983. It wasn't until the 1985 introduction of the IBM-compatible Vectra PC, however, that the company really began to make a name for itself in the PC systems arena. Three years later, a new family of high-end, 386-based Vectras was introduced: the QS/16, the RS/20, and the RS/25c. Each machine demonstrates HP's workmanship and dependability while offering cutting-edge performance.

The Vectra QS/16 is a small-footprint 386 that packs a lot of punch into a little box. The extremely sturdy system unit measures 6½ by 16½ by 15½ inches, making it slightly larger than a PS/2 Model 70 but still a considerable space-saver. Like the other 386 HP Vectras, the QS/16 features a power switch on the front of the unit, along with a power-on light, disk activity indicator, and cylindrical keyboard lock.

The HP Vectra RS/20 is a sturdily built tower unit. Protection comes in the form of a rugged steel chassis and a stainless steel shield screwed over the VLSI chips to cut down on RF noise. A built-in fan on the shield cools the processor.

TWO TOWER UNITS The Vectra RS/20 and RS/25c (the "c" stands for caching) are tower units with molded plastic casings that have a slick, refined look. Under the cover is a rugged steel chassis conveniently engineered for easy access to the components. For additional security, both RS units have system cover locks on the back of their monitors.

An HP Enhanced-style keyboard accompanied each test unit. The keyboard had smaller-than-normal key caps on normal-sized keys; although the difference may take a while to get used to, the keyboard has a pleasant feel. Audible key clicks can be enabled or disabled from the keyboard, and the extra-long keyboard cable (8 feet) is a nice feature.

Our QS/16 evaluation unit also came equipped with a 1.2MB 5¼-inch floppy disk drive, 40MB hard disk, Western Digital ST-506 controller, and 2MB RAM, bringing the total cost of the system to \$6,765. The three available drive bays limit your expansion capabilities to three internal devices; a tape backup is the obvious choice to fill the system's third accessible drive bay. Appropriately, the 220-watt power supply has only three device connectors.

The RS/20 sent to PC Labs included 1.2MB and 1.44MB floppy disk drives, a 103MB hard disk and controller, and an 80387 coprocessor for a total cost of \$9,610. Our RS/25c test unit came with a 25-MHz 80387 coprocessor, two floppy disk drives, and a 155MB ESDI hard disk. The price of that configuration came to

\$14,315—not the most expensive machine in this roundup, but close.

Each RS unit has six accessible half-height drive bays. The 230-watt power supply with five device connectors will suffice for nearly everyone's internal drive needs. To help fill those bays, HP offers a variety of high-capacity, high-speed disk drives ranging from 40- to 310MB. Those over 40MB are 17-millisecond ESDI drives manufactured by HP and low-level-formatted at the factory. You pay a hefty price for HP hard disks if you buy them separately (the 103MB drive, for example, is \$2,995), but you get top quality and blazing disk speed.

HP-MADE MOTHERBOARD Hewlett-Packard makes the motherboard for all the RS systems; the 16-MHz machine's ROM BIOS version D.02.00 QS/16 is a customized version of Phoenix Technologies' latest BIOS. The ROM BIOS versions E.02.00 RS/20 and E.02.00 RS/25c found in the RS models are also customized renditions of the Phoenix BIOS.

One 8-bit slot, six 16-bit AT-style slots, and one proprietary 32-bit slot are available on the QS/16's motherboard. A tiny expansion slot next to the power supply in all the Vectras comes filled with the HP-HIL (Human Interface Link) board, used for connecting HP input devices like touch-pads and mice. The QS/16's 32-bit processor/memory card held a 16 MHz 80386 processor and 2MB of 100-nanosecond DRAMs (although 1MB is standard). This modular-design card makes it

CIRCLE 560 ON READER SERVICE CARD

In Short: Built for the duration, the Vectra QS/16, RS/20, and RS/25c are engineering marvels. From the sturdy chassis to the rock-solid keyboard, these machines are designed to take you into the next century. In comparison with other 386s, you pay top dollar for the Vectras but get superior quality and break-neck performance in return.

very easy to install more memory or a coprocessor—no more messing around with your head buried inside your PC. While no cache controller is supported in the QS/16, zero-wait-state operation is made possible by page-mode memory.

Both RS systems have two 8-bit and six 16-bit slots along with the 32-bit processor/memory slot. The processor/memory card in the RSs is actually a parent card with a permanent daughterboard attached.

It's conveniently located at the very bottom of the unit for easy removal and installation and to help keep those chips cool. On all the Vectras, a stainless-steel shield is screwed down over the VLSI chips for protection against extra RF noise. The shields on both RS models also have fans built in directly over the 80386 20- and 25-MHz chips, and another fan is located at the front base of the units. It's obvious that HP went out of its way to meet (and even outdo) the stringent FCC Class B standards.

One megabyte of 100-ns, 256-kilobit SIMM modules comes standard in the RS/20, although the evaluation unit had 2MB. The RS/25c workhorse comes standard with 1MB of 80-ns. DRAMs in 1-megabit SIMMs, but our evaluation unit had 4MB. Both the RS models and the QS/16 are expandable to 16MB.

Both RS processor/memory cards support an Intel or Weitek coprocessor and an Intel 82385 cache controller rated at their respective speeds (20 or 25 MHz). The cache controller uses 32K of 25-ns. static RAM to achieve zero-wait-state operation.

A disk-based setup program allows all three Vectras to shadow the system and video BIOS in a 384K chunk of RAM. An HPCACHE program supplied with each system allows you to set up a disk cache area of up to 1MB in base, expanded, or extended memory. Also included is an expanded memory manager that lets you emulate expanded memory with the RAM that you loaded onto your system.

No, none of these new Vectra systems is cheap. But their superior engineering and top-shelf performance could easily convince you that they're worth the price.

—Greg Atwang

HiTECH INTERNATIONAL INC. HITECH SAM 3001/386

What do you think about HiTech International's \$1,295 base price for its SAM 3001/386 machine with 1MB of RAM, a Western Digital hard/floppy disk controller, a 1.2MB 5¼-inch floppy disk drive, one parallel and two serial ports, a 230-watt power supply, and DOS? Well if you like that, how about that same system with

The very low price of the HiTech SAM 3001/386 with a Seagate 43MB hard disk drive, VGA adapter and monitor, and 2MB of RAM can't be beat. The unit lacks cache RAM and memory interleaving but still manages decent speed.

an additional megabyte of RAM, a Seagate 40-millisecond 43MB hard disk, an 8-bit VGA adapter, a VGA monitor, and an 80287 math coprocessor—all for \$2,895?

We're not talking 386SX, either. The SAM 3001 has an honest-to-goodness Intel 80386-16 chip—real 32-bit goods. The motherboard is by American Digicom (under license from Micronics), one of the standards in the business; the BIOS is Award's. The standard 2MB memory card uses 100-nanosecond, static-column 256-kilobit DRAM chips, but you can install 8MB worth of 1-megabit chips on each of two 32-bit memory cards to get 16MB.

The unit isn't equipped with the fastest coprocessor in the world. But if you really want a top-of-the-line math coprocessor, Compaq will sell you a Weitek for \$2,599, suspiciously close to the price of the tested SAM 3001 system. If you can't live with the 8-bit VGA adapter, you can replace it with a faster VGA system.

And yes, the hard disk is *only* a 43MB, 40-ms. Seagate ST-251, the kind almost everyone puts into AT clones. But here's a simple trick that quickens its pulse rate: instead of partitioning it as one drive, divide it into two roughly 20MB partitions. Lo and behold, 28-ms. performance with a 40-ms. drive!

CIRCLE 266 ON READER SERVICE CARD

MODEST SPECS, GOOD SPEED

The SAM 3001 runs its expansion bus at a safe 8 MHz, so go ahead and add AT-compatible cards without worry. If you really need to slow down, simultaneously hit the Ctrl-Alt-Minus keys to cycle CPU speed to 8 or 6 MHz. There isn't any cache memory or even memory interleaving, though you can shadow the video and BIOS ROM, blocking off the top 384K of RAM. The system runs constantly with one wait state to avoid outrunning the 100-ns. chips. Funny thing, though—even with these modest specs, the SAM unit scores pretty well, landing in the middle of the 16-MHz pack on the PC Labs benchmark tests.

The keyboard is an unresponsive Key Tronics 101-key enhanced unit. So if you'd like some liveliness, put this one on the shelf and buy a replacement. That's the only change I'd make if I bought one of these systems.

The only real drawback is a more limited warranty policy than you get from most other mail-order vendors. HiTech International warrants everything but the hard disks for a year; the hard disks get only 90 days. HiTech also won't pay for shipping sickly systems either to or from its San Jose, California location. On the other hand, it does offer a 30-day money-back guarantee—the mail-order dealer's credibility move.

Some people may say that if the SAM 3001 can meet your needs, you don't really need a 386; a 286 might serve you just

fine. But golly, a real 386 that performs pretty well for just a few hundred dollars more than an AT compatible? Why not go for it?—Bruce Brown

IBM Corp.

IBM PS/2 MODEL 70-E61
IBM PS/2 MODEL 70-121
IBM PS/2 MODEL 70-A21

Tailored to a mere 5½ by 14 by 16½ inches (HWD), IBM's PS/2 Model 70 machines are living proof that power doesn't have to come packaged inside a huge case. The 70-E61, 70-121, and 70-A21 systems may be a little short on drive and slot space, but you do get fast 386 processors, room for plenty of memory, and lots of standard features in boxes that won't eat up your desk space.

The Micro Channel-based, small-footprint machines range from a \$5,995 base price for the 16-MHz 70-E61 to \$7,995 for the 20-MHz 70-121 to \$11,295 for the 25-MHz 70-A21. In the E61, that price includes 1MB of RAM and a 60MB hard disk; the RAM and storage space are doubled in the 121 and A21 systems. Other standard components in each unit include one parallel and one serial port, a mouse port, a 3½-inch 1.44MB floppy disk drive, a built-in VGA adapter, a 132-watt power supply, and three expansion slots—two 32-bit and one 16-bit. All three slots are empty and available in the standard units.

IBM makes everything in these computers: motherboard, BIOS, floppy and hard disk drives, controllers, video adapters, and monitors. The only non-IBM label is on the Intel processor chips.

The Model 70s weigh in at 21 pounds each, including the standard 101-key Enhanced-style keyboards. You may quibble with the key arrangement, but it's hard to argue with the feel, even though IBM has backed off a bit from the clicky responsiveness of its original XT and AT keyboards.

PS/2 MODEL 70-E61 The 1MB of 100-nanosecond RAM that comes standard is located in SIMM packs on the mother-

board, which can accommodate up to 6MB. Thirty-two-bit system memory can be brought up to 16MB by adding 10MB more onto a memory expansion card.

The E61 doesn't use shadow or cache memory, but speed is helped by the interleaved RAM. The default is zero wait states, but you can adjust that to two wait states by changing the interleaving factor with software. On this system, as well as on the other models, the expansion bus runs at a straight 10 MHz.

Although there was no math coprocessor in the test unit, the E61 will accept an 80387 chip. Our test configuration included all the standard equipment, as well as an extra megabyte of RAM and an 8513 VGA monitor. With DOS 4.01 (IBM no longer sells DOS 3.3), the price of the configured system rose to \$7,690.

A look at the E61's scores on the PC Labs benchmark tests reveals roughly average times in its class of 16-MHz 386 machines, with stronger performance in the Extended Memory and DOS File Access (large-record) tests.

PS/2 MODEL 70-121 The faster 20-MHz 70-121 is similar to the 16-MHz E61 in many respects: it uses the same motherboard, defaults to zero wait states, and

Nearly everything on the three versions of the small-footprint IBM PS/2 Model 70 is IBM-made. The 25-MHz PS/2 Model 70-A21 has an Intel cache controller and 64K of 30-nanosecond cache RAM to help it achieve top memory benchmark scores.

FACT FILE

HiTech SAM 3001/386
HiTech International Inc.
712 Charcot Ave.
San Jose, CA 95131
(408) 435-8827

List Price: With 1MB RAM, 1.2MB 5¼-inch floppy disk drive, \$1,295; with 60MB hard disk, monochrome monitor, DOS 3.3, \$1,895; with VGA monitor, \$2,650; with 2MB RAM, 43MB hard disk, 80287-10 coprocessor, \$2,895.

In Short: Dollar conscious? Look here. Unfortunately stingy warranty policies, but maybe that's why they can price these standard components so cheaply.

CIRCLE 84 ON READER SERVICE CARD

The Cool Machine Cometh

OKIDATA introduces a line of PC modems that run so cool they're guaranteed for 5 years.

Our new 1200, 2400 and 2400 Plus PC modems are built around a very simple fact: the cooler they run, the longer they last.

That's important in any modem, and it's vital in the case of an internal board. That's why we engineered a special chip that does the work of three ordinary chips. It also generates less heat—and consumes 50% less power—than the leading brand. Which is why we back our modems twice as long as they do.

But reliability on the inside comes as no surprise when the OKIDATA name is on the outside.

We have over a century of experience in telecommunications all over the world. And you'll see it in everything we make, from tank-tough printers to award-winning PC modems to a full line of high-speed modems.

To see our new "cool machines" in person, visit your OKIDATA dealer. Or call 1-800-OKIDATA for the name of the dealer nearest you.

ALR'S MicroFlex 7000: EVERYTHING YOU WANTED IN THE MODEL 80

When IBM constructed its first 25-MHz computer, the PS/2 Model 708570-A21, the company squeezed the components into a desktop case with only three expansion slots. Whatever happened to the floor-standing, 8-slot, 25-MHz powerhouse that everyone expected to see as a successor to the floor-standing 20-MHz PS/2 Model 80-311?

At the time of this writing, IBM hadn't announced any new 25-MHz machines. But Advanced Logic Research was showing off its own version of what such a machine might look like.

The ALR MicroFlex 7000 is the first floor-standing 25-MHz computer to use IBM's Micro Channel architecture (MCA). Until now, the very few MCA clones released have been Model 70-style desktops, like Tandy's five-slot 5000MC, and similar machines available only in Europe. ALR's MCA motherboard sports eight expansion slots: three 32-bit and five 16-bit. Like IBM's Micro Channel computers, ALR puts VGA on the motherboard, but ALR goes beyond IBM's 640 by 480 VGA resolution to the new Super VGA standard of 800 by 600.

MORE IMPROVEMENTS Like IBM, ALR puts 2MB of 32-bit, 80-nano-second RAM on the motherboard; you can increase memory to 16MB by installing the same kind of SIMMs that IBM uses. Also like IBM, ALR puts 64K of cache memory on the motherboard and controls it with the Intel 82385—but ALR supplements this with an advanced

FACT FILE

ALR MicroFlex 7000

CIRCLE #18 ON READER SERVICE CARD

version of its proprietary cache-control circuitry. ALR also supports the 80387 coprocessor, but lets you install a Weitek chip as well.

When the MicroFlex 7000 hits the streets, you'll be able to buy it in two configurations. The \$9,499 Model 120A21 (prices are subject to change by the time the product is released) sports a 120MB ESDI hard disk drive and a controller that includes a 32K hardware disk cache—something IBM doesn't offer. The \$14,750 Model 300A21 is identical except for a 300MB ESDI hard disk. Both machines include a 1.44MB 3½-inch floppy disk drive and IBM-compatible serial, parallel, and mouse ports on the motherboard.

ALR's tower case looks like a less-well-finished version of IBM's case for the Model 80. On a flimsy-looking top panel, ALR has added a brightly flashing LED display that gives you a graphic indication of the rate of "hits" achieved by

the hardware cache.

As audio manufacturers discovered when they started putting them on stereo amplifiers, flashing LEDs are boffo in the salesroom. But when you get them back to the office, you find that the fascination quickly wears off—and they're distracting. A few computers used by *PC Magazine* editors have similar displays, and in nearly every case the high-tech LEDs are covered by a low-tech Post-it note.

ONE HITCH, ONE MYSTERY Cloning the MCA turns out to be trickier than cloning the classic AT bus. The unfinished test sample of the MicroFlex 7000 that ALR sent to PC Labs didn't work with IBM's 8514-A video adapter, the only available expansion card that uses the special video extension on one of the Micro Channel slots. ALR promises to fix this problem before releasing the computer for sale.

One mystery still to be resolved is whether Micro Channel clones can be upgraded in the way IBM's Micro Channel machines apparently can be. Recently IBM revealed that existing MCA motherboards have unused circuitry that can be "awakened" with a forthcoming hardware upgrade. IBM promises improved performance for all its existing MCA machines.

Can MCA clones make use of a similar upgrade? That's the \$9,499 question raised by ALR's MicroFlex 7000.

—Edward Mendelson

does not support shadow or cache memory. While the system will accommodate the same amount of RAM (divided in the same manner between the motherboard and 32-bit add-in card), the memory chips are rated at a faster 85-ns. to keep up with the 20-MHz clock.

Unlike its 16-MHz sibling, the test configuration came with the addition of

an 80387 coprocessor. Adding on a VGA monitor and DOS brought the list price up to \$9,540.

The 70-121 is a moderate performer in the 20-MHz 386 group; its only outstanding performance was in our Extended Memory benchmark tests. Even so, the performance jump over the 16-MHz E61, as well as the extra megabyte of memory

and additional hard disk space that come standard, make the 121 worth the extra \$2,000, if you have it.

IBM PS/2 MODEL 70-A21 At a base price of \$11,295, IBM's flagship 25-MHz machine is \$3,300 more than the 20-MHz 121 base unit. For the extra money, you get a motherboard that can take up to 8MB

The Affordable Route to Unbridled Power.

We've never believed that power belongs in the hands of the few.

When the latest 80386 and 80286 microprocessors were first introduced, many dismissed them as a high-priced extravagance with limited appeal to most business users. These recent additions to our fine line of computing systems prove them wrong.

For the price of yesterday's computer, you can now own a 386 or 286 system that handles the demands of today's new power software with amazing ease, making even complex applications easier.

Standard features include:

- CompuAdd INTEGRATOR™ productivity software package
- Choice of 5.25" 1.2MB or 35" 1.44MB diskette drive
- Dual diskette/hard drive controller
- Integrated Drive Electronics (IDE) fixed disk drive interface
- Two serial ports and a parallel port built-in
- Enhanced 101-key keyboard

CompuAdd 386/25

- 80386 processor running at 25MHz or 8MHz software-selectable system speeds
- 0 wait state (32KB cache memory)
- 32-bit high speed RAM board with 1MB RAM expands to 16MB (384KB reserved)
- System and option ROM shadowing
- ROM-based setup
- Six 16-bit and one 8-bit expansion slots
- Math coprocessor support for 80387 or Weitek
- 28.8 on Norton's SI Benchmark 4.0 test

STARTER KITS

Instant Computing Without the Guesswork. We've matched up three of our most popular computers with all the software and accessories you'll need to start computing today. Complete with a dot-matrix printer!

Executive Starter Kit™

The Executive Starter Kit features CompuAdd's 386/16, praised by PC Magazine as "Yet another respectable performer... filled with high-quality components, including a speedy hard drive."

Kit includes:

CompuAdd 386/16 computer running at 16MHz or 8MHz, 0 well state (page-mode), 1MB RAM expandable to 4MB (384KB reserved for BIOS); 3.25" 1.2MB diskette drive; 40MB hard drive (or upgrade, see chart); five 16-bit and two 8-bit expansion slots; 60287 math coprocessor support; and choice of AT-style, 5151, or enhanced 101-key keyboard.

Monochrome monographics monitor or upgrade to EGA or VGA color video.

Epson® LX-800 printer with multiple type styles, 180cps draft and 30cps near letter quality.

Accessories and software including paper, printer cable, ten diskettes and CompuAdd INTEGRATOR™ program/life manager, cardfile database, calendar, calculator, text editor, and PC-FulBak™ software, plus CompuAdd MS-DOS™ and GW-BASIC.

\$2695

Hard Drives	MSA	EGA	VGA
40MB	\$2695	\$3095	\$3415
71MB	\$2985	\$3205	\$3415

Professional Starter Kit™

Our best selling kit. The CompuAdd 286/12 is a popular entry-level computer for the business environment due to its low price and 286 performance. InfoWorld said of the 286/12, "The system combines high speed and a low price for a very good value."

Kit includes:

CompuAdd 286/12 computer running at 12MHz and 6MHz, 512KB RAM expandable to 1MB; 5.25" 1.2MB diskette drive; 20MB hard drive (or upgrade, see chart); eight expansion slots; math coprocessor support; and choice of AT-style, 5151, or enhanced 101-key keyboard.

Monochrome monographics monitor or upgrade to EGA or VGA color video.

Epson LX-800 printer with tractor/friction paper feed, printing 180cps draft and 30cps near letter quality.

Accessories and software including paper, printer cable, ten diskettes and CompuAdd INTEGRATOR™ program/life manager, cardfile database, calendar, calculator, text editor, and PC-FulBak™ software, plus CompuAdd MS-DOS™ and GW-BASIC.

Career Starter Kit™

A workhorse system based on the trusty Turbo/10, a PC World "Best Buy." Perfect for students or home users.

Kit includes:

CompuAdd Turbo/10 computer running at 10MHz and 4.77 MHz; 540KB RAM; 5.25" 360KB diskette drive, diskette drive controller; eight expansion slots; math coprocessor support; and choice of AT-style, 5151, or enhanced 101-key keyboard.

Monochrome monographics monitor or upgrade to EGA or VGA color video.

Star Micronics NX-1000™ printer with multiple type styles, 120cps draft and 30cps near letter quality.

Hard Drive upgrade increases your system capacity with an optional 20MB hard drive. See the chart below.

Accessories and software including paper, printer cable, ten diskettes and Zen software package with ZenWord™, ZenCalc™, and ZenLink™. Plus CompuAdd MS-DOS™ and GW-BASIC. PC-FulBak™ software with optional hard drive.

■ 80386 DESKTOP PCs

of 32-bit RAM directly and can accommodate 8MB more on a card that plugs right into it; this way, you don't have to take up a conventional expansion slot.

Unlike the other Model 70s, the A21 doesn't use memory interleaving. It doesn't have to, though, since it has an Intel 82385 cache controller with 64K of 30-ns. cache memory.

Our test machine had the standard RAM and hard disk configuration. With a VGA monitor, DOS, and an 80387-25 coprocessor, the list price came to \$12,925.

The A21 screamed along with the fastest 25-MHz machines in our memory and processor benchmark tests. Drive performance scores were consistent with those achieved by the 20-MHz Model 70, and a little below average for a 25-MHz machine.

List Price: With 2MB, 120MB hard disk, 1.44MB 3½-inch floppy disk drive, \$11,295; with monochrome monitor, DOS 4.01, \$11,720; with VGA monitor, \$12,195; with 80387-25 coprocessor, \$12,925.

CIRCLE 640 ON READER SERVICE CARD

In Short: IBM's PS/2 Model 70s combine small size, impressive modular design, and guts of power in three pricey computers. You can't expand these computers much, but they come fully equipped anyway. Choose your weapon and enter the power-user wars. If you believe in Micro Channel architecture, these computers are very tempting.

That's something to consider, largely because of the major price difference between the two systems. It makes sense to spring over \$11,000 for the A21 only if you must have the highest performance in the areas in which it excels; otherwise, the decently performing 121 should do nicely.

There are some other factors to consider before plunking down your dollars for any of these machines. For instance, you should be sure that the size of the hard disk drives you get will be enough to cover your needs for some time, since you can't install any additional hard disk drives. You also can't add an internal tape backup system to a Model 70.

Secondly, the Model 70s don't make good file servers because they are limited by having only three expansion slots in each system. Speaking of expansion slots, you probably already know that MCA-compatible slots won't accept "normal" AT- or XT-compatible interface cards. MCA-style cards, while on the increase, are still relatively few in number. Better make sure that any extra interface cards you may need to add are available.

A SPACIOUS OPTION Of course, IBM does have an alternative for anyone who needs more drives or expansion space than the Model 70 dynamos can provide. The \$10,995 base price of the 20-MHz Model 80-111 386 system includes 2MB of RAM and a 115MB hard disk.

The Model 80 can take an additional 3½-inch drive as well as a full-height, 5¼-inch add-on drive. The system also accepts an internal tape drive.

Built into the system board are a parallel port, serial port, mouse port, floppy disk controller, and VGA circuitry. You get eight MCA expansion slots—three 32-bit and five 16-bit; in the standard configuration, only one of them is taken up by the ESDI hard disk controller.

The Model 80-111 doesn't use a memory cache controller but does use interleaved memory, a performance improvement that our benchmark tests don't take into account. This system performs about on a par with the 20-MHz Model 70-121 but is blown off the map by the Model 70-A21 with its 25-MHz processor and cache memory.

If you want the extra space and Micro

Channel architecture and you have to stick with the Big Blue label, the Model 80-111 is the way to go. But if you've ever considered purchasing a high-speed "laptop" to serve as your sole desktop machine, the combination of power and small size in the Model 70s—particularly apparent in the 70-121—makes them perfect alternatives.

—Bruce Brown

LASER DIGITAL INC.

PACER 386 20
PACER 386 25

A look at the identical cases of the Laser Digital Pacer 386 20 (base priced at \$1,961) and Pacer 386 25 (\$3,500) may give rise to a feeling of déjà vu. From the outside, these boxes could pass for many other 386 clones. A closer look reveals that the similarities are more than skin deep, yet these machines also have some features (not all admirable) that set them apart.

The Laser Digital computers offer fairly solid construction; the chassis are made of a heavier-gauge steel than systems from some other manufacturers. There are substantial shields around the two disk bays,

Laser Digital's Pacer 386 25, like its 20-MHz twin, offers solid construction, courtesy of the heavy-gauge steel. Substantial shields surround the disk bays, which offer room for five half-height devices.

CIRCLE 476 ON READER SERVICE CARD

■ 80386 DESKTOP PCs

which offer room for five half-height devices.

The cases, however, offer access to only two of the five drive bays. In these days of 5¼- and 3½-inch floppy disks, removable hard disks, CD-ROMs, and streaming tape backup devices, two open bays is just not enough. Most units allow easy access to at least three bays.

The Laser Digital motherboard on the 20-MHz model and the American Megatrends (AMI) motherboard (popular with so many clone manufacturers) on the 25-MHz unit offer eight slots each. Additionally, each system has cutouts in the back for I/O port connectors. On both test machines, these cutouts were taken up by one parallel and two serial connectors. The surprise came when I discovered that the ribbon cables for these ports were neatly wrapped with rubber bands inside the case, but there was nothing to which you might attach them! In effect, the computers came without any parallel or serial ports.

Pacer 386 25

List Price: With 4MB RAM, 1.2MB 5¼-inch floppy disk drive, \$3,582; with 80MB hard disk, monochrome monitor, DOS 3.3, \$4,400; with VGA monitor, \$5,149; with 130MB hard disk, \$5,495. 1MB RAM upgrade, \$360; 60MB tape backup, \$590; 150MB hard disk, \$1,495.

Circle 1 on Reader Service Card

In Short: A poorly designed case, the absence of standard ports, and documentation that is as thin as it is confusing all gang up to overwhelm the Pacers' low prices. Other machines offer more consistent quality and value for the money than you will find here.

MEMORY DESIGN The Laser Digital motherboard has an unusual memory design: it uses two banks of eight 256-kilobit by 4-bit chips, plus another set of eight 256-kilobit by 1-bit parity chips. The 24 chips add up to a total of 2MB of memory, and the motherboard has room for only another 2MB. To add more RAM, you'll have to use a memory board in the single 32-bit slot.

The story behind the American Megatrends system board on the 25-MHz test system is even more interesting. First off, the company says it is no longer selling this motherboard, but will instead be shipping a similar model from Abacus. The AMI motherboard we saw can accept either 256Kb, 1-megabit, or 4Mb DIP chips and 256Kb or 1Mb SIMMs. You can fit a total of 8MB of memory on the motherboard using four banks each of 1Mb DIP and 1Mb SIMM packages. If you need more RAM, a 32-bit expansion slot is available.

What's even more intriguing is that our test 25-MHz system came equipped with only 2MB of RAM, although Laser Digital lists 4MB of RAM as standard in the base configuration.

Both computers came with the AMI BIOS, which offers setup in ROM that can be accessed during boot-up. The Pacer 386 20 and 386 25 test configurations, priced at \$3,792 and \$5,247, respectively, came with large hard disks and Western Digital ESDI controllers, as well as separate floppy disk drive controllers. They also had 8-bit VGA adapters and Tatung monitors. A manufacturer's name was not visible on the Enhanced-style keyboards, but the feel was mushy and unremarkable.

Even with memory caching, the 25-MHz system did not garner outstanding marks on our benchmark tests. In fact, both machines turned in only respectably average performances.

The documentation for these machines was their weakest feature. The same manual came with both systems and neither the motherboard nor other features described in it applied to the test units. The 25-MHz model did come with a more-accurate supplemental manual, but imagine the confusion of a new user trying to divine which manual to trust.

Laser Digital's prices for fully equipped systems may seem attractive ini-

tially, but when you look at their less-than-flexible expansion schemes, poor documentation, and so-so performance figures, you must conclude that neither is as much of a value as it might at first appear.

—Alfred Poor

LEADING EDGE HARDWARE PRODUCTS INC. LEADING EDGE MODEL D3

If you've ever owned a Leading Edge computer before, the Leading Edge Model D3 16-MHz 386 machine will look as familiar to you as your reflection in a mirror. Like its 8088- and 80286-based predecessors, the Model D3 is a small-footprint (16 by 16 by 6½ inch HWD), lightweight (35-pound) box. Even the documentation looks familiar, except this time around you get a Microsoft OS/2 reference manual (although the machine comes standard with DOS 3.3).

The Model D3 does depart from its slower ancestors in more important respects. Inside the identical casing lies a 16-MHz Intel 80386 chip (switchable to 8

Storage space on the Leading Edge Model D3 is too limited for it to be a server, but home users will appreciate the 65MB hard disk, VGA monochrome display, and word processor that are included in the attractive base price.

MPC 4000** !

MITAC MPC4000 SERIES 25 MHz 386 TOWER-SERVERS

If you are looking for power and versatility in a LAN or multi-user server, it is time you looked beyond the obvious choices. Mitac's new, compact MPC4000 gives leading power and expandability at a far more economical price than either of the "leaders."

Engineered for your power applications, the MPC4000 is a perfect workstation, fileserver or multi-user host. Six mass storage device spaces accommodate 3-1/2" and 5-1/4" floppy drives, hard drives, optical storage and tape backup — more storage capability than any other similar-sized desktop or tower system. And cache memory brings performance up to a dazzling

5.8 MIPS, beating even IBM's PS/2 Model 80.

Mitac's attention to design is not only reflected in the ground-breaking vertical small-footprint shape of the MPC4000, but also in details such as both front- and rear-panel keyboard connectors which facilitate both on- and off-desk use.

Of course, like the rest of Mitac's complete line of small-footprint XT-, AT-, and 386-based computers, the MPC4000 is backed by a one-year warranty and our technical service hotline.

Available in both 20- and 25-MHz versions, the MPC4000 is the smallest, most powerful, and most versatile choice for all your high-power computer needs.

For complete details, ask your local dealer about Mitac's MPC4000 or contact us directly at

800-MITAC-US (648-2287).

BRIDGES

With Sysgen Bridge-Files,
data *can* get there from here.

Toshiba® T3100 with NEW Bridge-Laptop™ 5.25/T. Work on 5.25" diskettes with your Toshiba laptops (T3100 and up). Dual capacities of 360Kb and unique 1.2Mb capacity—more than available from Toshiba!

Compaq® Deskpro™ with Bridge-File 3.5. Lets all popular PC compatibles access 3.5" PS/2 and laptop files. Dual 720Kb and 1.44Mb capacities.

IBM® PS/2™ Model 30286 with Bridge-File™ 5.25. Now compatible with DOS 4.0 and OS/2™. Give ALL your 3.5" systems easy access to 5.25" disks. Dual capacity 360 Kb/1.2 Mb access to all files.

IBM PC/AT™ with Bridge-File 3.5. With Bridge-File any IBM PC/XT™ or AT generation computer can be upgraded to share information with your newer systems.

The problem.

Your PCs, PS/2s, Toshiba laptops and PC compatibles may share the same office. But still be worlds apart.

Different floppy disk sizes and formats can yield isolated information *islands* instead of productive work *groups*.

The Solution: Bridge-File 5.25 and Bridge-File 3.5 drives.

The only complete bridge family in the industry, Bridge-Files *can* get your data from here to there. And vice-versa. Your different computers will be working with common diskettes in no time flat.

Bridge-File 5.25 gets rave reviews for

its small footprint, ease of use and dual capacities. With over 100,000 at work for satisfied users, it's a proven best-seller. Now your PS/2s, Toshiba laptops and other 3.5" systems can access your PC files.

Bridge-File 3.5 lets your 5.25" PCs access files from other, 3.5" systems. And Bridge-File 3.5 functions as *either* an external or internal drive. Make all your current information accessible to all your computers.

Omni-Bridge™ Controller.

Control up to *four* 5.25", 3.5" and floppy tape drives in any combina-

tion. Omni-Bridge makes XT/AT upgrades easy—you get access to all your data, twice the transfer speed and increased storage. And it's economical — at \$95, Omni-Bridge is too good to pass up.

MHz), and 1MB of motherboard 100-nanosecond SIMM RAM (expandable to a 32-bit maximum of 8MB), for \$3,795.

APPEAL FOR THE HOME CROWD

Known among home computer enthusiasts for packing a lot into an attractively priced bundle, the base system includes *Leading Edge Word Processing* and a 65MB Microscience hard disk. The test configuration added a GoldStar VGA monochrome display. One parallel and two serial ports, as well as a high-density floppy disk controller, are on the Daewoo motherboard, leaving the two 8-bit and two of the four 16-bit slots free for expansion. The remaining two 16-bit slots will be used for the Adaptec hard disk controller and ATI VGA adapter.

Problems will arise if you need a machine with lots of room for storage devices. The hard disk drive is installed vertically to the right of the two half-height bays (one of which is occupied by the standard 5¼-inch floppy disk drive), leaving only one free half-height bay.

Obviously, this unit is not server material, and it's too limited to have much appeal for even the unnetworked corporate user. The FCC Class B-rated machine is better suited as a logical upgrade for the *Leading Edge* devotees and other home users who want more processor speed than their current system gives them.

SPEED AND UPGRADABILITY No one could mistake this machine for a real speed demon. The processor, disk, and memory benchmark tests were unimpressive, although the machine does have exceptional video capabilities. The 16-bit ATI adapter, the VGA monitor, and RAM shadowing of the video BIOS gave it the boost necessary for fast screen output.

To get into the machine, you need only unscrew one screw and flip a clip, but installing an Intel 80387 math coprocessor (Weitek is not supported) is another story.

**Home users
have known
Leading Edge
to pack a
lot inside its
attractively
priced bundles.**

You'll have to remove the floppy disk drive chassis to access the coprocessor socket on the motherboard. While you're under there, you may also want to upgrade your memory, as the RAM is located close by. To get the maximum 8MB of 32-bit RAM, you'll have to swap 1MB chips for the standard 256K chips.

The most distressing thing about this situation is that *Leading Edge*, which has always enjoyed a solid reputation, has filed for Chapter 11 bankruptcy protection. This has led Daewoo Telecommunications, the builder and supplier of the machines, to terminate its contract with the company. Unless the situation has changed by the time this issue is shipped, you should make sure that the system is in stock at the dealership before plunking down your money. If you're not uncomfortable without support or future enhancement options, take a good look: you may be in for a great deal.

—Kate Emery

MEMOREX TELEX CORP.

MEMOREX TELEX 386-20

The newest and top-of-the-line entry in Memorex's Intelligent 7000 series, the Memorex Telex 386-20 (base priced at \$4,595), is a class act all the way. The small-footprint chassis is handsomely designed with a recessed bottom to minimize desktop space requirements. Its economical use of space includes a vertically oriented 1.44MB 3½-inch floppy disk drive. Although they don't come standard, there's also room for two horizontally mounted 5¼-inch floppy disk drives at the center of the machine.

Other pleasant design features include the NMB Hi-Tek keyboard, which plugs conveniently into the front of the chassis, and horizontally oriented, well-labeled plugs for the printer and RS-232 ports on the rear of the machine. While the horizontal orientation is simply a by-product of the parallel and serial ports (as well as the floppy disk drive controller) being built into the American Mitac motherboard, Memorex's labels make a big difference. Just ask anyone who's ever been stymied by

COMPAQ DESKPRO 386s

COMPAQ PORTABLE 386

The Compaq 386 line Think of it as a buffet

For more and more personal computer users, higher PC performance is no longer a luxury. New operating systems and more-demanding applications are making it a necessity.

That's one reason Compaq has created the broadest line of Intel 386™-based personal computers available. Each is designed to deliver the highest-performing solution for every

different user's needs, with unmatched industry-standard compatibility and connectivity.

Take the COMPAQ DESKPRO 386/25, for example. For users who require the ultimate in performance, it's the most powerful personal computer available. And with standard features like eight expansion slots, your choice of four different storage devices and a wide selection of graphics

controllers, it's one of the most flexible personal computers, too.

The COMPAQ DESKPRO 386/20e brings the power of a 20-MHz 386 chip to personal computer users who are outgrowing their 286-based PC's.

VGA graphics, one megabyte of memory and interfaces for a mouse and printer come standard. In a sleek package that fits where

COMPAQ DESKPRO 386/20c

COMPAQ DESKPRO 386/25

of personal computers. for the power-hungry.

other PC's this powerful won't.

The COMPAQ DESKPRO 386s is also something of a breakthrough. It's the first PC designed to offer affordable 386 performance to people who are considering 286 PC's.

Compaq even makes high-performance personal computing available for takeout. With the most advanced, full-function, 386-based portable: the COMPAQ PORTABLE 386.

But then, who's more qualified than Compaq to make a high-performance PC to suit any taste? After all, we created the world's first 386-based personal computer back in 1986. Since then, we've emerged as the world leader in high-performance computing. That's why more FORTUNE 1000 firms have added Compaq to their approved vendor lists than any other brand.

CIRCLE 525 ON READER SERVICE CARD

the "all the ports look the same" dilemma.

In addition, the ubiquitous and anachronistic red on/off toggle switch is replaced with a nearly accident-proof pushbutton on the front panel—you'll really have to press this button hard to get the machine to reset.

DESIGN ODDITIES Occasional design oddities do crop up. The front panel of the 20-MHz system includes power-on, hard disk activity, and turbo LEDs, but the turbo indicator is dormant because the processor speed is not selectable (although bus speed and wait states are). Another curiosity is the case: it has room for six expansion slots, but the motherboard only has five—four 16-bit and one 8 bit. Memorex fills what would be the sixth expansion slot location with a standard 2MB of SIP memory.

The optional 80MB 3½-inch Quantum hard disk (\$2,000) that came with our test system lay comfortably wedged to the side of the power supply. While the RLL controller is cleverly built into the drive itself, a slot must still be dedicated to a Quantum paddleboard interface that allows the motherboard to communicate with the hard disk/controller. (Quantum says the paddleboard interface was released in hopes that motherboard manufacturers

would ultimately incorporate the design into the system board.) A more efficient design would be to use a motherboard that allows the hard disk/controller to be plugged right into it, thereby eliminating the need for the paddleboard.

Our benchmark tests proved Memorex to be a consistent if not speedy player. Shadow RAM (both BIOS and video) enhance performance, as does the two-way paged interleaving.

Memorex's prices are not the lowest you'll find; for example, our test configuration, with the standard 2MB RAM, the pricey 80 MB hard disk, a 5¼-inch floppy disk drive, and a VGA card and monitor, came to \$7,944. But if you're ready to relinquish your Cadillac-sized desktop model in search of a sleeker, trimmer breed, the Memorex Telex 386-20 should not be overlooked. —Robin Raskin

MICRO EXPRESS INC.

MICRO EXPRESS 386-20 MICRO EXPRESS 386-25

Micro Express is a relatively new company that assembles high-performance computers from brand-name components at realistic prices. In many respects, the Micro Express 386-20 and Micro Express 386-25 rank with the top competition.

One of the best things about these machines is the prices. For \$2,100 you get the 386-20 with 1MB RAM, a 5¼-inch 1.2MB floppy disk drive, one parallel port and one serial port, and an Enhanced-style keyboard; DOS can be purchased for an additional \$75. The base configuration of the 25-MHz unit includes the above plus three more MB of RAM for \$3,995.

The prices of our test configurations were also competitive. The 20-MHz evaluation unit, with 4MB of RAM, Control Data 150MB hard disk, 1.2MB floppy disk drive, VGA card and monitor, and DOS 3.3 came to \$4,824. The 25-MHz machine we tested, with a Micropolis 140MB hard disk, DOS, and the same VGA card/monitor combo, totaled a reasonable \$7,324.

Both machines are identical on the outside, resembling a standard PC AT-sized

A real bonus of the Micro Express 386-25 is that its reasonable base price includes 4MB of 80-nanosecond DRAM on the motherboard. The motherboard also accommodates 64K of 25-ns. cache memory, which gives the system a real boost.

box. A reset switch and a key lock sit on the lower left side of the case, where they won't be in the user's way. Looking under the cover, you'll find that most of the components are supplied by the same manufacturers, usually well-known outfits. NEC builds the monitors and Paradise makes the video cards. The motherboard and BIOS software are from American Megatrends, and the chip set maker is Chips and Technologies.

In each test configuration, the motherboard hosted the CPU and 4MB of RAM. While the 20-MHz unit uses slower, 100-nanosecond DRAM, the 386-25 zips along with 80-ns. DRAM. You can expand to 8MB of 32-bit RAM on the motherboard. And if you're preparing to run memory-hungry applications, a 32-bit expansion card can be used to fill the system with 16MB. The motherboard also incorporates a full 64K memory cache, operating with 35-ns. static RAM chips in the 386-20 and 25-ns. DIP RAM chips in the 386-25.

The layout of the two machines is pretty standard. There are eight full expansion slots: one 32-bit proprietary slot, six 16-bit slots, and one 8-bit slot, allowing for a fair, if not dazzling, variety of expansion options.

CIRCLE 820 ON READER SERVICE CARD

In Short: One of the best things about this relatively new company's machines is their prices. But there's more: brand-name parts, 64K disk cache, and good benchmark test scores. Worth a look.

standard. Three of the bays on the right have openings in the case front; the other two cannot be easily accessed.

ME 386-20 The ME 386-20 scored impressively in the benchmark tests. It was consistently among the fastest in the 80386 Instruction Mix, Conventional Memory, and Extended Memory tests. This is due to the use of the 64K cache with 35-ns. static RAM chips, as opposed to the popular Intel controller and 32K cache used by many other manufacturers. While increasing the amount of static RAM will speed up your performance only slightly, those few seconds can make a difference.

The 386-20 also scored high on the BIOS Disk Seek test and the large-record DOS File Access test. This can be attributed to the very fast ESDI hard disk. Since it is a high-capacity drive, it has an easier time searching for large files. On the downside, because the hard disk drive is formatted to handle larger files more

quickly, it may have trouble dealing with smaller files. This may account for the average score the machine garnered on the small-record DOS File Access test.

ME 386-25 The results of the benchmark tests varied for the ME 386-25. In the 80386 Instruction Mix and large-record DOS File Access tests, the ME 386-25 rated among the top machines. Put this down to the 64K cache and the speed of the hard disk.

But in the PC Labs Extended Memory tests, the ME 386-25 placed in the middle of the pack. Moreover, the ME 386-25

Micro Express computers are a worthwhile choice for high performance on a restricted budget.

didn't rank very competitively in the small-record DOS File Access and BIOS Disk Seek tests when compared with the other machines in its class.

While the Micro Express machines performed exceptionally well in many cases, and almost never disappointed, their documentation could use work. It seems like just a bunch of pamphlets on each separate component thrown together, rather than a cohesive manual. The information you want can probably be found, but you'd better be prepared to do some digging.

The Micro Express computers are a good choice for users who want high performance but are on a restricted budget. The unusual 4MB of RAM standard on the 25-MHz unit is a real bonus. As long as you don't have to depend on their documentation, the Micro Express 386-20 and 386-25 deserve a close look.

—Lonnie Lum and Elisa J. Hirsch

Either Way You Look at It, Peachtree Accounting Saves You Money.

PEACHTREE'S DOUBLE BONUS BUNDLE

Includes Peachtree Complete II
plus
Peachtree Data Query II

JUST
\$298

SAVE \$100

With PDQ II Enhanced You Can:

- Create on-screen inquiries to display data
- Present data to list or bar graphs
- Use any of over 20 pre-defined reports
- Modify pre-defined reports and save the formats
- Create your own reports and save the formats
- Transfer accounting information to spreadsheet and database programs like dBASE III® and Lotus 1-2-3®

And More!

A Recent Survey by the
American Institute of
CPAs Reports More
Accountants Use and
Recommend Peachtree
Than Any Other
Accounting System!

When it comes to accounting software, no one offers you more for your money than Peachtree. Now we're offering you two ways to buy our best-selling accounting software — and two great ways to save.

Peachtree Complete™ II is our premier business accounting system. Designed and sold as a \$5,000 accounting system, the latest version of Complete II represents a vastly expanded and greatly improved package that sells for an unbelievably low \$199. Find out what over 250,000 satisfied users already know — no other accounting system offers so much for so little.

And now, for businesses who want to make the most of their accounting information, Peachtree's Double Bonus Bundle gives you Peachtree Complete II Accounting plus its own custom reporting tool, Peachtree Data Query II™ Enhanced. The Double Bonus Bundle includes both systems — regularly priced at \$199 each — for just \$298. That's

a savings of \$100! Either way, Peachtree offers you the most accounting you can get for your software dollar.

Peachtree Complete II is a comprehensive accounting system developed to meet the needs of small- to medium-size businesses. It comes with eight high-power modules that may be used individually, or fully integrated for maximum accounting efficiency:

- General Ledger
- Accounts Receivable
- Accounts Payable
- Invoicing
- Inventory
- Job Cost
- Fixed Assets
- Payroll

And Peachtree Complete II is designed using the latest software innovations, like full-color scrolling reference tables, pop-up windows, and short-cut keyed menus. We've expanded to allow an unlimited number of companies, added service invoicing, range printing, and more.

Peachtree Complete II's error handling is quick and easy, with plain English messages and suggestions. Context-sensitive Smart HELP is on-line, all the time. And as always, Complete II comes with the most thorough documentation — a separate quick-start Installation Guide, Accounting Primer, seven-volume Reference Library, and extensive on-line tutorials on each module — all at no extra charge.

Now you can extend the power of your Peachtree accounting to include custom reporting and analysis, and save even more money! Order the Double Bonus Bundle and you'll get Peachtree Complete II, plus Peachtree Data Query II Enhanced, for just \$298.

PDQ lets you turn raw figures into highly sophisticated reports, allowing you safe, easy access to valuable information from all eight Peachtree Complete II modules. PDQ's simple, clear approach gives you maximum control and flexibility. You tell PDQ what information you need, and PDQ looks through your accounting files, finds it, and presents it to you any way you want it — on screen or printed, as a graph, in report form, or ready for export to another software package.

You can begin creating reports in just minutes, thanks to all new user instructions and on-line practice sessions that lead you through the system and build confidence as you go. With Peachtree's Double Bonus Bundle, accounting and custom reporting go hand-in-hand, and that makes good business sense.

MONEY BACK GUARANTEE. We stand behind Peachtree Complete II and PDQ II with a toll-free hotline for technical support (\$1 per minute, \$20 minimum on your credit card) and a 30-day money-back guarantee when you buy directly from Peachtree. If for any reason you're not satisfied, you can return your package within 30 days for a prompt refund. That's the Peachtree Software promise. A \$25 restocking fee applies to all returns.

Peachtree Complete II: the Business Accounting System for just \$199, and Peachtree's Double Bonus Bundle for just \$298. Either way you look at it, Peachtree Software saves you money. Order today!

HARDWARE SPECIFICATIONS: Requires PC/MS-DOS version 2.0 or higher with 384K of usable memory (512K required with DOS 3.1) and a minimum 10 MB hard disk. For use with the IBM® PC, XT, AT, PS/2, and compatibles. 3.5" media optionally available. Not copy protected.

"What am I doing here?"

I guess I have a reputation for saying what's on my mind. So when the people at Everex asked me to be in their ad, I said it was okay as long as they let me have the floor.

The reason I like their Step 386/20 is simple. It's fast. It is definitely the fastest machine that I've seen so far.

When they sent the machine over, I put it through every benchmark test I could find. I finally gave up. It was the highest on all of them.

Give me the choice and I'll use the fastest thing I can get my hands on. This happens to be it.

What can I say?
I like the beast.

MICRO 1 INC.

MICRO 1 POWER 386-16
MICRO 1 POWER 386-20

When it comes to computers, you have to choose between price and performance, right? You have to pick a basic model that is stripped of features or pay big bucks for the bells and whistles that make a machine go fast.

Meet the Micro 1 Power 386-16 and Micro 1 Power 386-20, the two computers that are fast turning this belief into a misconception. The low base price of \$1,530 for the 16-MHz version and \$2,010 for the 20-MHz model includes 1MB of RAM, one 1.2MB 5¼-inch floppy disk drive, a keyboard, and the AMI BIOS. Better yet, the fully loaded Power 386-16 and Power 386-20 test configurations racked up price totals of only \$3,385 and \$3,865, respectively.

The test prices include 2MB of RAM in the 16-MHz version and 4MB in the 20-MHz model, as well as an 80387 math coprocessor, a parallel port, a game port, and two serial ports in both. The 16-MHz model had two 25-pin serial connectors, while the 20-MHz version sported a 25-pin and 9-pin pair for its ports. Both also included hard disk options, VGA equipment, and Key Tronic 101-key XT/AT keyboards, which have an adequate but unimpressive feel.

Despite their low prices, the Micro 1 machines don't give up any points in the

performance arena. The Power 386-16 and Power 386-20 use different versions of the American Megatrends Inc. (AMI) motherboards, but both models come complete with hardware memory cache. This no doubt helped the systems turn in impressive results on the memory benchmark tests. On these, as well as on the CPU tests, each machine logged in times that often placed it near the top of its class.

POWER 386-16 The 16-MHz unit is packaged in a typical desktop AT-clone case, with three of its five half-height drive bays open from the front. The motherboard offers the usual complement of eight slots, including one 8-bit, six 16-bit, and one proprietary 32-bit.

The 32-bit slot is already filled with a memory expansion card when you buy the machine, as the motherboard does not hold any RAM itself. The memory card will take 8MB directly and another 8MB via a daughtercard. The 16MB 32-bit RAM total should be more than adequate for today's OS/2 and DOS applications.

The Power 386-16 also came with a half-height 45MB Toshiba hard disk, driven by an Omti combination floppy/hard disk controller. A Relisys VGA color screen and 16-bit Paradise VGA rounded out the system.

POWER 386-20 The Power 386-20 came in a vertical clone case. The unit has room to accept up to six half-height devices, all of which can be accessed through

CIRCLE 634 ON READER SERVICE CARD

In Short: The Micro 1 Power 386 computers are big on performance and low on price. Their documentation is their biggest liability, but they use good-quality components that get the job done. These models may well represent some of the best values in their class.

The Micro 1 Power 386-20 is packaged in a vertical clone case. Unlike the 16-MHz model's desktop case, the vertical case has room for six half-height devices that can be bolted directly to the drive bay, just like the original IBM PC and XT chassis.

holes in the front panel. Unlike its sibling's desktop case, which relies on side rails for mounting devices, the 386-20 lets you bolt the devices directly to the drive bay, just as you could with the original IBM PC and XT chassis.

The 386-20 version of the AMI motherboard also sports one 8-bit, one 32-bit, and six 16-bit slots. Unlike the motherboard found on the 16-MHz system, this version accepts RAM, and it does so in both DIP chips and SIMM memory packs. Eight megabytes can be piled onto this board (using 1-megabit chips and modules) before you need to consider filling the 32-bit slot with a memory card that can hold another 16MB of RAM. The total 32-bit memory capacity of 24MB is perfect for Unix installations. On the other hand, if the 8MB of motherboard RAM is enough for now, the 32-bit slot will happily serve as a home for an 8-bit card.

■ 80386 DESKTOP PCs

The 20-MHz model came with a 140MB full-height Toshiba hard disk attached to an Adaptec floppy/hard disk controller. The 16-bit Paradise VGA was hooked up to a 16-inch Nanao multifrequency FlexScan color monitor; the big picture screen was a dramatic and refreshing change from the smaller monitors that came with the other computers I reviewed.

The fit and finish on both these machines was acceptable, but the documentation proved to be a weak link. The instructions were of the fairly typical brown-bag variety: simply a collection of pamphlets and manuals from the component manufacturers enclosed in a three-ring binder.

Novices unfamiliar with MS-DOS computers and their components may want to spend the extra money for a machine that more explicitly outlines its capabilities and operation. But if you are comfortable and confident in getting around a PC, the low prices and superior performance of the Micro 1 machines make them a bargain that you have to consider.—Alfred Poor

MITSUBISHI ELECTRONICS AMERICA INC. MITSUBISHI MP386

If Mitsubishi's 386 computer could zoom at 20 or 25 MHz instead of merely zipping along at 16 MHz, it would be one of the unquestioned champions of this survey. But even at 16 MHz, the MP386 stands out, thanks to its broad shoulders and remarkable adaptability.

The 23-inch-wide shoulders of this desktop machine, which is base-priced at \$3,995, suggest its special capabilities. The motherboard has 11 expansion slots, including 1 proprietary slot that holds a 32-bit card with 1MB of RAM standard (and room for 1MB more) and part of the hardware cache. Two serial ports, a parallel port, and a floppy disk drive controller reside right on the motherboard, so that even when you install a hard disk drive controller and a video card, you still have eight full-length slots remaining. And even after plugging in a network card, a scanner controller, a fax board, an image-capture board, a secondary video adapter, and

Considering its 23-inch-wide shoulders, it's not surprising that the desktop Mitsubishi MP386 holds 11 expansion slots. What's even more appealing to network users is that most of these slots are available, since the two serial ports, a parallel port, and a floppy controller reside on the motherboard.

8MB more of RAM between two 32-bit memory boards, you'd still have a slot left over.

The MP386 has five drive bays; three are accessible from the front, so you can fit in the 1.2- and 1.44MB floppy disk drives and a tape backup unit and still have room for a full-height hard disk.

Mitsubishi can supply its own monochrome, EGA, or VGA monitors and cards, as well as 40- and 70MB hard disks designed to be used with a standard ST-506 controller. Our test machine had a Mitsubishi EGA card and monitor and a moderately well-performing but virtually silent 40MB CDC hard disk. MS-DOS 3.3 comes with the machine; Xenix System V is a \$595 option. Mitsubishi also includes Multisoft Corp.'s *Super PC-Kwik* disk cache, the editor's choice in PC Magazine's recent survey of cache software (see "Getting the Most Out of Memory," February 14, 1989, page 157).

THE NETWORK CONNECTION The expansion capabilities of the MP386 make it an ideal network server. Mitsubishi evidently had this possibility in mind because it offers an optional intelligent multiport (with eight ports) for \$995 and a four-channel RS-232C controller at the rather

odd price of \$202. For number-crunching, Mitsubishi can sell you an 8-MHz 80287 coprocessor, but you're better off installing a 16-MHz 80387, obtainable from other suppliers.

As a network server, the MP386 includes some well-thought-out safety features. The rocker-style power switch is recessed enough to be hard to hit accidentally. Similarly, the reset switch on the front panel is hidden by a door and can be reached only with a pen or a similar tool. The same door hides DIP switches that let you configure I/O ports, video, and memory mapping without taking the top off the case.

The MP386 performed among the better 16-MHz machines, although its extended-memory timings were notably slow. The computer comes with a standard 32K hardware cache that can be doubled in size. When doubled, the cache becomes a dual-associative design for even greater speed.

Mitsubishi's manual is exceptionally clear and detailed, and the internal components of the computer display outstanding workmanship and quality. I hope Mitsubishi may someday decide to manufacture its own keyboard instead of supplying a Key Tronics Enhanced-style model. It is less mushy than most clone keyboards but still too soft for comfort.

FACT FILE

■ 80386 DESKTOP PCs

Anyone in the market for a 386 with almost limitless expansion, high-quality components, and excellent documentation should take a long look at the Mitsubishi MP386. There are faster machines out there, but few that are better built.

—Edward Mendelson

NCR CORP. NCR PC916

Not all clones come from the Far East; the NCR PC916 is a case in point. While NCR headquarters is in Dayton, Ohio, the machine is assembled in West Germany. For a big-league base price of \$4,495, the European assembly line will configure your system with a 16-MHz CPU, one floppy disk drive, and 2MB of RAM (but no keyboard or display). That price also buys you a machine that, from its distinctive case to its passive backplane design, is clearly the

A passive backplane on the NCR PC916 hosts one card with the CPU, another with memory. Since there are no 32-bit slots, these two cards establish a 32-bit data path through a pair of edge-connector sockets. A third card houses the floppy/hard disk controller, ports, and a video card.

product of independent thinking.

The case offers the standard five half-height drive bays, but only two appear to be accessible through the front panel. A gentle tug at the front bottom edge will drop down a hinged cover, allowing you access to a third half-height device. This cover also hides a power switch, a key lock, and a volume control for the speaker. An attractive smoke-colored plastic dust-cover slides over the other two disk bays. The case is designed to work in either a desktop or upright arrangement.

Inside, you will find other clever little details. Glued to the top of the disk bay housing is a plastic tray that contains all the screws and rails you need to mount additional drives. The PC916 even comes with a screwdriver.

OFF THE BEATEN TRACK The component design is very atypical. The PC916 uses a passive backplane design that offers two 8-bit and six 16-bit slots. The CPU re-

THE 80386SX GETS A JUMP START

Nearly a year after its debut, this child star of microprocessors is pushing aside the 286 and coming into its own.

Even before it was announced on June 20 of last year, Intel Corp.'s 16-MHz 80386SX microprocessor was causing a stir in the industry. And when Compaq Computer Corp. introduced its small-footprint 386S engineered around the 80386SX last July, we heralded Compaq's continued innovation and leadership in the 386 market. (See "Compaq's Despro 386S: Less Is More," *PC Magazine*, August 1988.)

But there still seems to be a lot of confusion about what the 80386SX is and what it isn't, and why you should buy a 386SX-based machine as opposed to a fast 286-based machine or a full-fledged 386. Here's some help.

MEMORY ARCHITECTURE What makes the 80386SX microprocessor so interesting? The 386SX is a hybrid of the 386 and 286: it uses 32-bit internal processing, as does the 386, but operates

with a 16-bit external data bus, like the 286. In processing power and instruction set, the 386SX is the equivalent of the 386. And like the 386, it offers a 4-gigabyte address space.

Another trait the 386SX has in common with the 386 is its support of virtual 86 mode; this allows hardware support for simulating multiple 8086-type CPUs within one PC. The result: you can take advantage of multitasking software like *DESQview 386*, *Microsoft Windows!* 386, and *VM/386*, which let you run your applications concurrently.

What, however, is the advantage of decreasing 386 power by operating with a 16- rather than a 32-bit external data bus? A 16-bit data and memory path allows the 386SX chip to operate in an AT-class machine—compatible with all AT-class peripherals and expansion cards. The total cost of producing such a machine is similar to that of a fast 286, as

opposed to the faster but ordinarily pricier 386.

Unfortunately, there's no easy upgrade: it's tougher than just purchasing a 386SX chip and plugging it into your AT's 286 microprocessor socket. Different in size and construction from any type of 286 chip, the 386SX is manufactured using a new type of packaging designed strictly for surface mounting—the 100-pin Plastic Quad Flatpack.

Several manufacturers, Cumulus Corp. ((216) 464-2211) and Aox ((617) 890-4402) among them, plan to release 386SX adapter cards that will plug into a 286 socket. Since the 80286 can be packaged in several ways, be sure the type of board you choose will plug into the 286 socket on your AT's motherboard.

THE MIDRANGE Intel claims that the demand for the 386SX chip has been the greatest of any processor within the

sides on one card and the memory on a companion card. These two cards establish a 32-bit data path through a pair of edge connector sockets that stick to the bottom of the chassis via two stand-off posts with double-faced tape on their bases. (The tape covering was still in place on the evaluation model, making it impossible for the posts to stay put. NCR said this was an accident and not standard on all the machines it ships.)

A third card, called the Personality Board, serves as the floppy/hard disk controller. It also carries a daughtercard video adapter that uses Paradise VGA chips. The same card holds the parallel and serial ports.

There is an inherent problem with this design. The NCR format means that you will have to rely on the company to fulfill your CPU and memory expansion needs. And while you could replace the standard Personality Board with separate cards, you'll have to give up precious slot space.

FACT FILE

NCR PC916
NCR Corp.
1601 S. Main St.
Dayton, OH 45479
(800) 544-3333
(513) 445-5000

List Price: With 2MB RAM, 1.2MB 5¼-inch floppy disk drive, \$4,495; with 70MB hard disk, monochrome monitor, DOS 3.3, \$6,690; with VGA monochrome monitor, \$6,949; with VGA color monitor, \$7,194. 2MB RAM upgrade, \$1,550; 60MB tape backup, \$1,995.

In Short: The NCR PC916 offers an unusual design with better-than-average performance for a 16-MHz machine. Unfortunately, flawed documentation and bungled details, in addition to its relatively high price, make it a less appealing value than other 386 machines in its class. Unreliability may also be a problem.

CIRCLE 626 ON READER SERVICE CARD

The PC916 does have some other problems. The speed-changing program does not work as described. You get a diagnostic disk, but you are required to copy it before it will run. You can't simply copy it to your hard disk, either; you must do the floppy shuffle on the one drive that comes standard.

The disk-based help system is a good idea, but the programmed colors are such that you cannot read any of the screens on the monochrome display that NCR supplied with the \$6,949 evaluation unit. There is no documentation that explains how to change the colors.

Worst of all, we encountered reliability problems. The first system we were sent simply would not work, while the second unit was cursed with hard disk troubles. The problem was solved when NCR sent us a replacement hard disk.

The machine turned in better-than-average CPU and memory times on the PC Labs benchmark tests. The replacement

Comparative Pricing: A 386 Family Portrait

As prices of 80386SX-based computers dip closer to those of their 80286-based brethren, the number of reasons for stopping short inevitably grow fewer. This table shows back-to-back the prices of comparable machine configurations offered by companies now shipping 386SX-based machines. Because the basic configurations vary from one company to another, it is not possible to directly compare 386SX prices. (Note: Advanced Logic Research prices include VGA graphics and the 82385 cache controller; NCR Corp.'s include VGA graphics and a 44MB hard disk; Zeos International's include Hercules graphics, a monochrome monitor, and a 32MB hard disk drive.)

	80286 (12 MHz)	80286 (16/20 MHz)	80386SX (16 MHz)	80386 (16/20 MHz)

N/A—Not applicable. Company does not make a model rated at this speed.

first 6 months of its launch period—five times more 386SX chips were shipped than 386 chips, ten times more than 286 chips. In fact, Intel now devotes two facilities to production of the 386SX chip and claims to supply over 100 computer

manufacturers with the chips.

Intel's strategy in introducing the 80386SX seems to be to retain its leadership role in the microprocessor market. Machines engineered around fast 80286 chips from competitors Harris Corp. and

AMD have been gaining a firm foothold in the middle tier of computing power. So by offering more than the speed of these fast 80286 chips, the 80386SX is Intel's attempt to reclaim the midrange market that has begun to creep away.

By adding an entry-level 386 processor to the Intel 386 family, the chip supplier is able to offer complete mid-level and high-end microprocessor solutions within the 80386 product line. This solution would downgrade the 286 to the lower tier of processing power, the niche currently occupied by the 8088.

PRICE WARS Despite this strategy, until the close of 1988 few 386SX-based machines had appeared in the marketplace, and sales of those had proved slower than anticipated. The market for 386SX-based machines, in other words, was languishing rather than booming. Some industry analysts were already viewing these machines as white elephants—doomed to be a short chapter in PC history, as was another hybrid machine, the IBM XT-286.

But in February, Intel announced it

(continues)

■ 80386 DESKTOP PCs

CDC 70MB hard disk showed fairly typical performance for this class of machine.

Even if the PC916 had exhibited thorough performance, it would still be a questionable choice. Its 16-MHz speed is relatively tame in the current marketplace, while its price places it among the top players in the industry. Unless your company demands that you do one-stop shopping with NCR, look elsewhere.—Alfred Poor

NEC INFORMATION SYSTEMS INC.

NEC POWERMATE 386/20

NEC often waits for markets to mature or open wide before it enters the fray; when it does elbow its way in, it is usually with a substantial product. Such is the case with the PowerMate 386/20, the desktop 386-based model in NEC Information Sys-

The NEC PowerMate 386/20 is a practically homegrown machine. Not only does the system sport a proprietary motherboard, but the evaluation unit includes NEC's 155MB hard drive, its responsive 101-key Enhanced keyboard, and the field-leading MultiSync II monitor.

tems' newly released line of 386-based computers. That line also includes an 80386SX desktop machine (see the sidebar "The 80386SX Gets a Jump Start"), a lunchbox-size 386SX-based unit, and the BusinessMate 20-MHz 386 tower configuration, intended primarily as a Unix multiuser, multitasking system.

The PowerMate 386/20 is a straight 20-MHz machine; for a base price of \$4,695, you get 2MB of 32-bit RAM on a memory board, either a 1.2MB or 1.44MB floppy disk drive, and one parallel and two serial ports. The keyboard is NEC's own 101-key Enhanced-style, with a very nice response. In fact, NEC also makes its own motherboard and uses many of its own chips, although the ROM BIOS is from Phoenix.

For \$7,395, you can get an alternative base system that differs only in that it uses a memory board with 8MB of 32-bit RAM. The amount of base memory on this machine makes it more suitable for OS/2

"The 80386SX Gets a Jump Start" (continued)

would soon drop the price of the 16-MHz 80386SX chip to \$89 (in quantities of 1,000) in its second quarter—from an original price of \$165—to enable the 386SX to compete more effectively with fast 286s. In the same quantities, Intel's 12½-MHz 80286 costs \$40; Harris sells its 16-MHz 80286 chip for \$75 and its 20-MHz 80286 for \$100. (Although Intel also plans to cut 80386 microprocessor prices, the price of the 80386SX should remain closer to that of an 80286.)

In the weeks since Intel announced its intentions, several manufacturers of 386SX-based computers, including Compaq, have dropped the prices of their 386SX-based machines, which are now more in line with 286 prices. Overall, the trend is to price 386SX-based machines within a few hundred dollars of high-end 286-based models rather than closer to high-end 386-based offerings. And in the case of Zeos International, a 386SX-based machine is priced *lower* than a 12-MHz 286.

WHY BUY? So why should you choose a 386SX machine over a 286?

■ **Faster performance.** In clock speed alone, the 80386SX is faster than a 12-MHz 80286. Although we haven't put every new 386SX-based machine through the complete battery of PC Labs benchmark tests, initial results for the five 386SX-based machines we tested, from Everex Systems, Zeos International, NCR Corp., Compaq, and NEC Information Systems, compare favorably with those of 16-MHz 386 machines reviewed. Our tests of the Everex and Zeos models also compare favorably with the 20-MHz 286 machines reviewed in "The 80286: Unsafe at Higher Speeds?" (PC Magazine, December 27, 1988).

■ **Unix and Xenix.** Although you can run Unix or Xenix on a 286, you'll notice a drastic improvement in performance with a 386SX.

■ **Multitasking.** You don't have to wait for your favorite applications to be rewritten for OS/2 to enjoy the benefits of multitasking. *Microsoft Windows/386*, *DESQview 386*, and *VM/386* are among several multitasking environments you can run with a 386SX-based machine.

You can't use them with a 286.

■ **386 applications and compilers.**

Several popular applications have been rewritten to use 32-bit instructions, including *Paradox 386* and *Q&A/386*. Thirty-two-bit versions of FORTRAN, C, and COBOL compilers make a programmer's life easier as well.

■ **Price.** With list prices for some 386SX-based machines lower than the prices of 12-MHz 286 machines, and with 386SX chips growing even more plentiful, why lock yourself out of 386 processing power and features?

If you look at the 386SX chip as an enhanced 80286 rather than a crippled 80386, the 386SX market is still an emerging one that's poised to take over the midrange of computing power. As of this writing, at least ten machines had appeared in the marketplace over the past few months, with at least five more ready to ship within a month.

While there are good reasons to buy a 386SX computer instead of a 286, a lower price tag is the only reason to pick a 386SX over a 286. As the prices of 386 machines fall, 386SX prices will have to follow.—Catherine D. Miller

The Network Hardware Solution.

Famous CORE Reliability. CORE file servers, workstations, subsystems and peripherals give you the reliability needed to protect your network investment.

Powerful File Servers. The ATomizer 386/20 and 386/25 floor-standing file servers provide mini-computer performance with five full-height or ten half-height drive slots and up to 2.8 gigabytes of capacity.

The ATomizer 386/20 desktop file server (not shown) provides up to 1.4 gigabytes of capacity. All offer uncompromised growth capability.

High-Performance Workstations. Complete your network configuration with ATomizer 286/12 full-size and small footprint workstations. Both increase user productivity with fast system performance and high-speed network throughput.

High-Capacity Peripherals. CORE 90 to 700MB, 9 to 16ms disk drives, high-speed 10 or 15MHz controllers and external LAN subsystems let you upgrade a system to a file server without sacrificing performance. Protect your valuable data with COREtape backup units.

Compatible with such operating systems as Novell, Star LAN and 3Com, as well as industry-standard cabling, cards and other network components.

Wherever Word Processing is Done...

XyWrite III Plus

No matter where you sit in the organization, XyWrite III Plus should be there.

Novice to Professional Everyone can use XyWrite. New hires and temporary staff go to work immediately with A La Carte menus. More seasoned personnel use simple, logical commands to speed up production. The dual interface reduces the learning curve and makes training a snap!

Memo to Annual Report Regardless of what you're working on, XyWrite boosts productivity and inspires creativity. Formatting control is so complete that handsome output is guaranteed, whether you use XyWrite on its own or with a page layout package such as PageMaker or Ventura.

As It Is or As You Like It Use XyWrite right out of the box or customize it for yourself, your workgroup, or your company. XyWrite can easily be tailored to automate word processing tasks or reinforce company standards.

For more information on how your organization can benefit from XyWrite III Plus, contact the sales department at 508-671-0888 ext. 88.

■ 80386 DESKTOP PCs

and Unix applications than the \$4,695 model would be. While DOS comes standard with both NEC PowerMate configurations, you can get OS/2 1.0 for \$325 or SCO Xenix for \$695.

System memory is composed of 80-nanosecond DRAM chips running with zero wait states and four-way memory interleaving. Automatic RAM shadowing of both video and ROM BIOS is available, but cache memory is not. Accordingly, the PowerMate 386/20 did not do as well in our benchmark tests as the systems with cache RAM did, although it proved itself to be a solid midlevel performer.

MORE MEMORY FOR THE MONEY

In the \$7,395 unit, system RAM can be expanded to 16MB of 32-bit chips by adding a competitively priced (\$4,000) 8MB board that plugs into the standard memory card. Those with conservative memory needs who opt for the 2MB configured system can buy an \$1,100 add-on board with room for an additional 2MB of RAM.

The PowerMate 386/20 has ample

**For solid
machines from a
company with
plenty of
resources, you
can't do much
better than NEC.**

room for expansion. It can handle up to five storage devices and has a 237-watt power supply with five separate connectors. Besides the single 32-bit expansion slot used for the memory card, you get two 8-bit and five 16-bit slots. Slot space is conserved by building the parallel and serial ports and floppy disk drive controller right into the motherboard. Filling up the empty slots shouldn't cause problems: the expansion bus runs at a rock-solid 8-MHz,

List Price: With 2MB RAM, 1.2MB 5 $\frac{1}{4}$ -inch or 1.44MB 3 $\frac{1}{2}$ -inch floppy disk drive, \$4,695; with 42MB hard disk, VGA monitor, DOS 3.3, \$7,240; with 8MB RAM, 155MB hard disk, 80387-20 coprocessor, 16-bit NEC VGA card and MultiSync II monitor, \$12,735. 2MB RAM upgrade, \$1,100. 40MB tape backup, \$695.

In Short: The PowerMate 386/20 is a solid 20-MHz machine for a power-user workstation or a small network file server. NEC is a reputable brand name with an established service and dealer system.

CIRCLE 627 ON READER SERVICE CARD

ensuring compatibility with older interface cards.

The Western Digital ESDI hard disk controller on the test configuration managed a NEC 155MB hard disk, with access times under 18 milliseconds. The test configuration also came with the 8MB memory board, a fairly expensive 80387-20 math coprocessor, and an excellent combination of the 16-bit NEC VGA card and the field-leading NEC MultiSync II monitor, all for a hefty \$12,735 list price. No need to lose heart, though—NEC's computers are sold only through dealers and are often discounted heavily off the list price.

NEC support and service is also available exclusively through its dealer network and authorized NEC Service Centers, which are located throughout the country. The service centers are an especially fine option to have when your dealer is unable to help you.

NEC is a huge company with lots of resources to back up its products. While the PowerMate 386/20 isn't the fastest, least expensive, or most technologically innovative 386 that we reviewed, it is a solid machine with the right ingredients and enough options to make it effective as a power-user workstation or a small network file server. You could do a whole lot worse than going with NEC, but you can't do much better.—Bruce Brown

IBM, COMPAQ[®] OR ZEOS[®]

PC Resource Magazine, "ZEOS... provides quality comparable with IBM or Compaq and does so for about 70% of the price."

Personal Computing, "ZEOS... is the best value we've come across... its performance is right up there with the slickest, most expensive PCs you can buy."

PC Magazine, "Don't pass up the ZEOS... solid construction, flexible design and escape-velocity performance make it a top flight choice."

InfoWorld, "We find the ZEOS 386 an excellent value. Speed: Excellent. Compatibility: Excellent. Value: Excellent."

PC Magazine Editors Choice, "The ZEOS 386 blows away every other computer... a smart choice."

The Choice is Clear.

ZEOS®

'386 Systems of Choice

February 28, 1989

The experts are in agreement. ZEOS builds the very best '386 systems in America.

The words on the preceding page are not ours. They are expert assessments of the ZEOS commitment to provide you with the very best '386 systems you can buy.

Similar praises are echoed by other reviewers around the world. And by our customers. They reflect our absolute commitment. To quality. To performance. To reliability and support. Quite simply, to *Value*.

In *all* areas, ZEOS '386 machines are top performers. With uncompromising attention to detail and quality throughout.

Take our guarantee for instance. It's not just a "compatibility" guarantee, but a 30 day Full Refund Satisfaction Guarantee, no questions asked. And that's backed up by our One Full Year Limited Warranty.

Then there's Technical Support. At ZEOS technical support is not only free, it's *Toll Free*. Seven days a week.

But few people need call. Because ZEOS uses only top quality components, many designed and manufactured right in our own factory. Consider the little things. Like true *high speed* serial ports. Or our use of genuine Hercules® brand graphics cards for monochrome systems. Then consider the big things.

Like quality ultra-high performance motherboards designed for your present *and* future needs. Hard Disk drives from reputable manu-

facturers, brand names that you know. Even floppy drives; only Teac® will do.

Selection too. As PC Magazine said, "more options than even the most configuration-hungry-hound could possibly need." Have what you want. Nothing more, nothing less. Your system will be built to your exact specifications. Then fully burned in and tested right in our own labs.

These are the reasons ZEOS is the choice of so many editors. These are the reasons ZEOS is your best choice. So pick out your dream machine and order it now with confidence. Your choice of ZEOS quality and performance is, in a word, *Guaranteed*. Order now by calling 800-423-5891.

Leasing Programs are available. All prices and specifications are subject to change without notice. Please call for current pricing and warranty details. COO orders may require an advance deposit. NORTHGATE COMPUTER SYSTEMS

NORTHGATE ELEGANCE 386/20 NORTHGATE ELEGANCE 386/25

Northgate Computer Systems' Elegance 386/25 tower model and the desktop Elegance 386/20 represent two real values in the 386 market. The base prices of \$3,399 for the 20-MHz system and \$3,999 for the 25-MHz unit are reasonable, considering that they include the AMI BIOS, DOS, 1MB RAM, two floppy disk drives, one parallel and two serial ports, a hard disk, and a monographics monitor and Hercules card. In addition, the two systems offer top-flight performance.

Both machines arrived with preformatted hard disks containing DOS and a utilities subdirectory. Among the utilities is a hypertext-like program that gives you on-line help about DOS, the included utilities, and the system itself. Call up the program, and a quick jab at the arrow keys for topic selection gives you a concise rundown on the hows and whys of what you'd like to do (even experienced users can forget the cryptic options needed to format a 720K disk in a 1.44MB drive). The *Super PC-Kwik* disk-manager software and caching software, as well as the *VOPt* disk optimizer, are also preconfigured and are installed on the system.

Each machine is also equipped with Northgate's Omni Key 102 keyboard with audible mechanical feedback. It's a gem of

no uncertain value, being somewhat less harsh than an IBM keyboard but more resistant than the Jell-o-like keyboards that arrived with many of the other machines reviewed in this issue.

ELEGANCE 386/25 The flagship of the Northgate line is the Elegance 386/25. Our evaluation unit included a deluxe tower, a \$975 option (with ten half-height drive bays, a 250-watt power supply with dual variable-speed fans controlled by a thermistor inside the case, and a level to ensure that the 386/25 sits foursquare on the floor) that has finally put to rest my fears that towers are too easy to tip over.

We tested the durability (accidentally, of course) by dropping the 386/25 off a table. An electrical power strip was squashed, the tower was dented, but the computer itself needed only a pass with CHKDSK (it was powered but not running when it fell) to jump back to life.

One important aspect is the read/write-back cache system included with the proprietary motherboard. This is supplied in place of the somewhat exotic page-mode memory addressing found on many 386s, and Northgate claims a hit rate greater than 85 percent for its system. Keep in mind that the best results occur with the largest cache and that the test unit was topped off at 256K.

The \$11,394 test system also came equipped with 4MB of RAM (a maximum 16MB of 32-bit memory can be split between the system and memory board) and a gigantic 600MB SCSI hard disk.

In Short: The speed of these systems, combined with their high-quality components and documentation, merits anyone's consideration. The benchmark test results tell the real story of these quality 386s, though their refreshing warranty policy and other thoughtful measures help, too.

ELEGANCE 386/20 The drop in speed from the 25-MHz unit to the slower 20-MHz Elegance 386/20 was quite a bit more noticeable than I thought it would be. After the excesses of the Elegance 386/25, the low-end test 20-MHz system, with 2MB of memory, 64K of read/write-back cache, and a measly 80MB hard disk, felt almost boring. It is the benchmark test results that tell the real story, though. As with the 386/25, the FCC Class B-rated Elegance 386/20 surfaced second from the top without resorting to over-oscillated processors or any other feats of artful dodging.

The price of the tested system is right, too. Even when equipped with the same top-of-the-line VGA system as the 386/25, the tested system still costs a palatable \$5,300.

Two 32-bit slots sit on the motherboard (along with six 16-bit), but with system board RAM capacity at 8MB, expansion RAM card capacity at 8MB and a total sys-

The Northgate Elegance 386/25 deluxe tower and 386/20 system are each equipped with the company's Omni Key 102, a properly resistant keyboard. Each also offers read/write cache memory—256K in the 25-MHz, 64K in the 20-MHz—on the proprietary motherboard.

I'M WELL CONNECTED.

- 150 Megabytes
- Internal Cassette
- Compatible with PC, XT, and ATs and PS/2 Models 50, 60, 70, and 80
- Fast 6.6 MB/min backup
- Easy to use — Award Winning Software
- Novell Approved
- XENIX Compatible
- One Year Warranty

AND I CAN BACK IT UP.

It's finally complete. I now have all of our PC workstations integrated into five operating department LANs. A lot of vital information is flowing through these networks every day. Information my company can't afford to lose! That's why I've put a MaynStream 150 cassette backup from Maynard Electronics in each of my supervisor stations.

With a mixture of Compaq's and PS/2's it was important to find a compatible, high performance, internal tape backup system that would fit into all of my supervisors' workstations. It turned out that MaynStream is the only 150 megabyte, high performance drive in the market that fits into both a 3½ inch AND a 5¼ inch bay. And the MaynStream 150 cassette is 3 times faster than any other internal 3½" form factor product. The MaynStream 150 has all

of the features we've grown to expect around here. It's fast, easy to use, and it's compatible with our other MaynStream products.

Now, I'm well connected, and I can back it up. Can you?

Maynard Electronics

We're backing you one-hundred percent.

460 E. Semoran Blvd., Casselberry, FL 32707 407/331-6402

■ 80386 DESKTOP PCs

tem capacity of 16MB of 32-bit memory, I honestly couldn't imagine what to do with the extra 32-bit crevasse.

ADDED APPEAL Other extras add to the appeal of both machines. Each came equipped with enough manuals and pamphlets to start your own reference library. The documentation that originates from Northgate is clearly illustrated and written in simple language.

Common to both computers is Northgate's warranty policy, which has some surprising terms. If a part breaks within 1 year of purchase, Northgate will ship out a replacement to you overnight (at its own expense) without your first needing to ship the defective unit back. The company is also currently negotiating an optional on-site service relationship with Sorbus Systems.

When it comes down to it, the speed of these systems, combined with high-quality components and documentation, would certainly earn them a place in my home, not to mention my office. —Bill O'Brien

OLIVETTI USA OLIVETTI M380/XP1

Who says computers have to look boring? The gray-toned case of the Olivetti M380/XP1 defies such notions with a look reminiscent of European designer fashions. Olivetti has even attracted AT&T, whose less-ornamental computers are made by the Italian-based company.

Behind the pretty face, however, lies a 20-MHz computer that has a tough time living up to the promise of its outer appearance. For a base price of \$6,995—no small change—you get 1MB RAM, an 80MB hard disk from Magnetic Peripherals, a 1.2MB floppy disk drive, and one parallel and one serial port. Our tested configuration included Olivetti's own VGA monitor with a 16-bit Paradise adapter card and an extra megabyte of RAM for a total list price of \$8,579.

HIDDEN SWITCHES At the bottom front of Olivetti's 7¼-inch-high case lies a tiny, nearly invisible power-on switch. Beside it is an equally camouflaged reset

button, a volume-control dial, a hard disk activity indicator, and a lock.

Olivetti's keyboard (it matches the case, of course) is well constructed and offers a firm touch. There's one problem, though: If you're short on desk space and need to push the keyboard against the computer, you'll find you've lost easy access to your power-on and reset switches. Also, the monitor plug doesn't fit into the computer's intended outlet.

Getting to the heart of the FCC Class B-certified M380/XP1 is another tricky matter. To overcome the limitations of the machine's small-footprint design, Olivetti has positioned its motherboard underneath the board housing the expansion slots, face down.

A 32-bit connector links the motherboard with the rest of the system. To get at the processor, Olivetti's BIOS, or the TTL chip set, you must turn the unit upside down and remove the bottom panel.

Three half-height drive bays, a 230-watt Alitec power supply with three connectors, and two 8-bit, two 16-bit, and three 32-bit expansion slots also lie within the attractive casing. Each 32-bit slot can hold a memory board fitting as much as 16MB, using 1-megabit SIMMs. (Our test system used 256-kilobit DRAM chips running at 100 nanoseconds.)

One caveat: If you're planning to run AT-compatible boards in the M380/XP1, you may hit trouble. This machine's bus

The Olivetti M380/XP1, with its decorative pattern and gray-toned case, sports real European flair. The outer trappings are marred by inefficient construction: the motherboard is placed facedown beneath the board holding the expansion slots.

speed is 10 MHz rather than a comfortable 8 MHz and may stymie an older board.

SPEED VS. SLUGGISHNESS The Olivetti's Western Digital ST-506 controller led the machine to admirable results in PC Labs' BIOS Disk Seek benchmark test, where it finished in the top third. It also earned high marks in the DOS File Access benchmark tests.

But on those tests that relied on system architecture and memory speed, the Olivetti proved less impressive. Both the Conventional and Extended Memory tests found the machine wanting, zero wait states notwithstanding. And it ranked in the lower third on the 80386 Instruction Mix and Floating-Point Calculation tests.

With its M380/XP1 and other higher-end 386 models, Olivetti has been targeting the 386 market in the United States and Europe. But one obstacle it faces with the M380/XP1 is the paltry 90-day warranty period. The other is that there are plenty of other companies targeting the same market—and doing it better. If the company ever succeeds in matching its performance to its looks, the M380/XP1 is sure to turn heads. Right now, it's just beauty without brains. —Susan L. Hayes and Edward L. Perratore

FACT FILE

Olivetti M380/XP1

Olivetti USA
765 U.S. Hwy. 202
Somerville, NJ 08876
(201) 526-8200

List Price: With 1MB RAM, 80MB hard disk, 1.2MB 5¼-inch floppy disk drive, \$6,995; with monochrome monitor, DOS 3.3, \$7,360; with VGA color monitor, \$7,880; with 2MB RAM, \$8,579. 1MB RAM upgrade, \$699; 60MB tape backup, \$1,237.

In Short: The Olivetti machine has a tough time living up to the promise of its designer-quality casing. Its Western Digital hard disk controller helped it to shine in some tests, but the machine proved disappointing in others.

from Software Publishing, Professional Write 2.1 incorporates all the features managers want into an easy to use program.

Follow-along tutorials, pull-down menus and context-sensitive help will have managers pouring out memos and reports in less than an hour with no special training or MIS support. What's

more, its Preview feature wipes out wasted printing runs by showing what a report will look like before it's printed. Professional Write even shares files with other popular word processing programs. And supports high quality laser and dot matrix printers, providing managers access to a flood of fonts. So call today for a free trial disk. Professional Write will have managers instantly producing sophisticated documents, instead of wringing their hands over complicated software.

Aw...What the Heck!

EXTREMELY POWERFUL

DesignCAD 3-D version 2.0 is as powerful as most CAD systems costing \$5000 - \$10,000! Features like: Complex Extrusions-linear, scalar, and circular, Blending of Surfaces, Shading, Cross Sectioning, Complex Sweeps and Translations, and Boolean operations make DesignCAD 3-D one of the most powerful 3-D CAD systems available... at any price! Engineers, Architects and Consultants constantly tell us that they use CAD systems costing thousands of dollars which are not as powerful as DesignCAD 3-D.

VERY EASY TO USE

Just because DesignCAD 3-D is powerful doesn't mean it is difficult to use. Single keystroke commands and side-bar menus which give short directions on how to proceed make DesignCAD 3-D a snap to use. While not required, DesignCAD 3-D supports all popular digitizers and mice.

Many of the older, more cumbersome CAD systems require weeks of training before a user can be productive. DesignCAD 3-D users find they can be producing useful drawings in a matter of minutes! In a recent CAD contest only one contestant was able to match our drawing time. The package sold for \$3000.00. The other CAD packages took up to twice as long to perform the same drawing and cost up to \$5000.00!

Still don't believe us? The goblet pictured below required only 16 keystrokes and 3 commands to create! The top, front, side, and isometric views were created simultaneously... in less than one minute!

DesignCAD 3-D only \$399!

WHY BUY THIS ONE?

There is a very important reason to buy DesignCAD 3-D. **PERFORMANCE.** No other CAD system can match our price/performance ratio. Many people make the serious mistake of thinking that it is necessary to spend thousands of dollars to obtain "a good 3-D CAD system." This is not true! We talk to people everyday that are sadly disappointed with their "expensive" CAD systems. Don't be one of them! Call us and we will send you a complete set of literature and a free slide show demo disk. Once you compare DesignCAD 3-D version 2.0 with other CAD systems we know you will choose DesignCAD 3-D.

DON'T TAKE OUR WORD FOR IT

Here is what other people have to say about DesignCAD 3-D:

"After you've worked with DesignCAD, the single keystroke commands are simple to remember and it becomes easy to "lick one key" to execute a command. An extremely ergonomically designed program."

HENRY LEVET, Levett & Dagle Architects - New Orleans, LA
Designed a 65,000 sq. ft. nursing home using DesignCAD

"Recently I worked with a firm that builds decks. They purchased your product on my recommendation. I sat down with them and in two hours they were very proficient in DesignCAD. Now they are more effective, and we can communicate... it's wonderful to be able to do a block repeat 42 times and there are 42 2x4's to make the deck!"

J. TURNER, Architect, TAD Ltd. - The Woodlands, Texas

"Allows scientists and engineers to expend minimum time learning and using CAD software so that their time can be expended on the project at hand. It also allows scientists and engineers to quickly present to management all views of a subject. (3-D)."

DR. STEVENS, NASA Space Sciences/Engineer

HOW DO I GET ONE?

DesignCAD 3-D version 2.0 is available from most retail computer stores, or you may order directly from us. DesignCAD 3-D is available in a number of foreign languages from distributors throughout the world. All you need to run DesignCAD 3-D is an IBM PC Compatible and 640K RAM. DesignCAD 3-D supports most graphics cards, printers, plotters and digitizers. Free information and a demo diskette are available by contacting us at:

VERY LOW PRICED

The first question asked by many people is, "Why is DesignCAD 3-D priced so low?" The answer? After developing DesignCAD 3-D version 2.0, we were unable to decide how the product should be priced. We consulted experts. We used the finest spreadsheets on the market. We took employee polls. Finally, in the great American Tradition, we said, "Aw... What the Heck! Let's see the other guys beat this price!" DesignCAD 3-D version 2.0 sells for \$399.

PAN-UNITED CORP.

**MICROLAB 386/20
MICROLAB 386/25**

A newcomer to the 386-based fray, Pan-United Corp. offers two systems with a range of configuration options, none of which involve questionable, no-name parts. The company's MicroLab 386/20 and 386/25 computers are equipped with respected, industry-standard components. Usually, when a vendor uses well-known entities, the prognosis for customer support and machine reliability is good.

Both the 20- and 25-MHz machines can be housed in either an AT-style desktop chassis or a monolithic tower. Both casings are of handsomely designed solid metal with plastic front-cover panels. The units, which received FCC Class B approval, sport the AT design blueprint—one internal full-height hard disk bay and a stack of three half-height bays on the top or the right, depending on the chassis orientation. The front-panel indicators include power-on and turbo LEDs (which show 8-MHz or high-performance clock speed) on both units, with an additional LCD on the 386/25.

The 386/20 and 386/25 come standard with unalterable zero wait states, 1MB of memory, 64K cache memory, and a

Pan-United computers come with top-notch components.

1.2MB 5¼-inch floppy disk drive, for base prices of \$3,197 and \$4,397, respectively. Both units can be configured with a variety of monitors, keyboards, and alternative disk drives. The systems we reviewed used top-notch brand-name components, including Micropolis ESDI high-capacity hard disks, TEAC floppy disk drives, Video Seven's much-acclaimed FastWrite VGA display adapters, Tatung

AMI's motherboard and BIOS grace many of the more-reputable 386 machines, including Pan-United's MicroLab 386/25 (and its 20-MHz counterpart). Using 1-megabit chips, this motherboard can hold up to 8MB of RAM, divided between DIP and SIMM packs.

monitors, and Key Tronics' Enhanced-style keyboards (with the clicky feedback that makes typing pleasurable). The prices for these configurations came to \$5,432 for the 386/20 and \$8,607 for the 386/25. The only proprietary part of the system is the power supply, a single-fan, 200-watt affair that includes a switch for either 110 or 220 volts.

The MicroLab machines contain the traditional expansion slots—one 8-bit and six 16-bit—as well as a proprietary 32-bit slot for expanded memory. Serial and parallel ports are located on the machines' Western Digital controller card.

AMI MOTHERBOARD Like many of the more-reputable 386 machines on the market, the MicroLabs include AMI's motherboard and BIOS. The AMI board uses Chips and Technologies' chip set and contains sockets to support the Weitek or Intel 387 coprocessors, although neither of these is included.

The motherboard also reserves sockets for conventional DIP RAM chips and SIMM RAM chips. The DIP sockets will accommodate 1MB if you use 256-kilobit chips or 4Mb if you can get your hands on 1-megabit chips. The four SIMM banks can be filled in the same manner. Both the

DIP and SIMM will also accommodate 4Mb chips (when they become available), but then you would have to choose between the DIP bank or the SIMM bank. Using the 4Mb chips, you could place up to 16MB on the motherboard and add another 16MB to the expansion card.

The cache memory uses the faster static-column RAM (SRAM); it offers increased performance where you need it most. The 386/25 uses 25-nanosecond SRAM; the 386/20, 20-ns. SRAM.

One of the nicest things about the AMI BIOS is that the diagnostics are built into ROM. When you power-up the machine, you can either use the CMOS setup program or run the comprehensive diagnostics to perform a low-level format on a hard disk or test the cache memory. The CMOS setup program can be used to enable shad-

MicroLab 386/25

List Price: With 1MB RAM, 1.2MB 5¼-inch floppy disk drive, \$4,397; with 60MB hard disk, monochrome monitor, DOS 3.3, \$5,277; with VGA monitor, \$5,807; with 4MB RAM, 150MB hard disk, \$8,607. 1MB RAM upgrade, \$695; 150MB hard disk, \$1,595; 60MB tape backup, \$550.

CIRCLE #19 ON READER SERVICE CARD

In Short: Pan-United's MicroLab 386/20 and 386/25 use well-known top-of-the-line components that minimize the risks involved in buying mail-order AT clones. A combination of sturdy workmanship, AMI's respected motherboard and BIOS, and Video Seven's FastWrite VGA display adapter make the MicroLab machines good performers for price-conscious shoppers who want brand-name components.

PC Change.

A kinder and gentler mutation.

Spring is a time of transformation here in the mutable metropolis of Marlow, NH (pop.558). First our snow- and ice-covered back roads turn into treacherous trails of mud, virtually overnight. Next, the local teenagers begin walking around with suspicious looks on their faces. But you really know that spring has sprung when our spritely mascots take off their down-filled parkas, flannel shirts, and countless layers of thermal underwear and begin to romp with reckless abandon in the sunlight. Look out!

Go with the flow.

(Or, why the water's no longer over the dam.)

A lot's changed around here since we first began selling products for the PC in 1982. Back then, our warehouse was in a closet, orders were filled by hand, and the dam on the nearby Ashuelot River was badly in need of repair. But even though we now have a much larger warehouse, the most sophisticated order processing system in micro

mail order, and one of the most solid dams in New Hampshire, we're still country boys, girls, (and animals) at heart.

In spite of all our technological prowess, the parking lot still isn't paved, we're still surrounded by acres of forest, and our idea of a power lunch is using the microwave to heat up soup. Which means that the people you talk to when you call us tend to be a little friendlier, a little more laid back, and a little more patient than your average bear.

Get in your licks!

The most magnificent Marlow miracle of all is still the annual metamorphosis of maple sap into maple syrup—a change that can make everybody's life a whole lot sweeter. A pint of this famous nectar, featuring the mascot who never waffles, is yours free with any order of \$500 or more between now and May 31st.

Just call 1-800/243-8088 or 1-603/446-3383, M-F 9:00 to 9:00; Saturday to 5:30. If you're planning to visit, please call ahead.

The pot is definitely sweeter with a pint of our pure New Hampshire maple syrup. Offer not available to accounts on net terms. One per customer.

For IBM Personal Computers exclusively.

PC CONNECTION

■ 80386 DESKTOP PCs

ow RAM, which essentially copies the ROM-based video drivers to RAM for faster execution.

Although you'll have to lay out an additional \$95 for DOS, the machines do come with a fair amount of software, including *SEEMS 386*, AMI's emulation of the LIM EMS 4.0 expanded memory. If you buy a hard disk with more than 40MB, the company throws in *Disk Manager*, a hard disk diagnostics and partitioning utility. Perhaps the highlight of the system is the FastWrite VGA and its accompanying software. Together, the display adapter and shadow RAM are high-power performers.

Those who prefer just to use their PCs, not explore them, will appreciate having machines that are "C-prompt ready." The hard disk drives come low- and high-level formatted with DOS 3.3.

With configuration options culled from a variety of established manufacturers, the MicroLabs won't win prizes for original thinking or design. But Pan-United does offer a nice, safe foray into the 386 world.

—Robin Raskin

PC DESIGNS INC.

PC DESIGNS 386-20 PLUS

Since our review of PC Designs' 16-MHz GV-386 in our December 1987 roundup of fast and affordable 386-based PCs, we haven't heard much from the folks at the company. Most likely they've been cloistered away, earnestly upgrading and enhancing an already good-quality machine.

The result of their efforts is the desktop-sized PC Designs 386-20 Plus. Like its predecessor, the Plus (base-priced at \$2,799) is a well-designed machine—only this version comes packed with 20 MHz of processing power and a few other interesting enhancements.

At \$11,215, the fully loaded test configuration is competitive with other 386 machines. This price includes a serial/parallel port card, an additional serial port, a 16-bit Paradise VGA adapter, a 155MB Control Data hard disk, 1.2MB and 1.44MB floppy disk drives, an Adaptec ESDI controller, 1MB of 32-bit RAM on

the motherboard, and an add-in memory board with a generous 8MB more. A NEC MultiSync II monitor and a 101-key Maxi-switch keyboard were also included. The test configuration did not include a tape drive, but a Wangtek 60MB tape cartridge drive is available through PC Designs.

The FCC Class A-certified unit is equipped with a 200-watt power supply from Fortron and is designed to hold three accessible half-height drives plus two internal half-height or one internal full-height disk drive.

HOMEMADE MOTHERBOARD

Although you can choose to configure your machine with a variety of components, most of which are manufactured by other companies, at the heart of the 386-20 Plus is PC Designs' very own Model 32 motherboard.

The standard Model 32 motherboard contains a 386 chip switchable between 10 and 20 MHz and a maximum of only 1 MB of 32-bit, 256-kilobit, 100-nanosecond DRAM. It also provides you with 64K cache memory using fast 35-ns. SRAM modules, as well as eight expansion slots: two 32-bit, two 8-bit, and four 16-bit. The limited memory capacity of the motherboard can be compensated for by filling

PC Designs' 386-20 Plus uses a proprietary motherboard that supports the Intel 80387 coprocessor as well as the Weitek 3167 and 1167 modules. The motherboard takes a maximum of 1MB of RAM, but both 32-bit slots can be filled with 8MB worth of memory cards.

FACT FILE

PC Designs 386-20 Plus

PC Designs Inc.
2500 N. Hemlock Circle
Broken Arrow, OK 74012
(918) 251-7503
(800) 322-4872

List Price: With 1MB RAM, 5¼-inch floppy disk drive, \$2,799; with 60MB hard disk, monochrome monitor, DOS 3.3, \$3,652; with VGA monitor, \$4,405; with 8MB add-in board, \$7,405. 155MB hard disk, \$1,799; 60MB tape backup, \$669.

In Short: Although the PC Designs 386-20 Plus doesn't offer any earth-shaking new technology, it is a well-designed, competitively priced 20-MHz machine that offers all the processing power, upgrade potential, and virtually limitless possibilities you could want in a 386-based computer.

CIRCLE 636 ON READER SERVICE CARD

both 32-bit slots with memory boards that take up to 8MB of RAM each, bringing 32-bit system memory up to the rather odd sum of 17MB.

One of the more interesting features of the 386-20 Plus, and an upgrade from the GV-386, is having Intel 80387 math coprocessor support on the motherboard. In addition, the motherboard is capable of supporting the Weitek 3167 and Weitek 1167 modules. In fact, the tested system was equipped with both the Intel and the Weitek 1167. If you have a program that can take advantage of a Weitek module, you simply turn the module on by following the accompanying software's instructions.

Speedwise, in zero-wait-state mode, the 386-20 Plus scored above average on the 80386 Instruction Mix, Conventional Memory, and Extended Memory benchmark tests. In contrast, it received a below-average score for the small-record DOS File Access test and an average score for the large-record DOS File Access test. The 386-20 Plus also scored poorly in the BIOS Disk Seek test.

Overall, PC Designs' latest effort effectively integrates brand-name components and a proprietary motherboard to yield generally swift and solid performance. If you're in the market for a 386, this system is worth a look. —Stephanie Izarek

■ 80386 DESKTOP PCs

PC LINK CORP.

PC LINK 386-16
PC LINK 386-20

It's hard to see how you could go wrong with one of PC Link's computers. All the electronic components are made in the U.S., and the systems' performance will satisfy anyone who won't despair if he doesn't own a speed champion. The workmanship is the best you can find, short of IBM, and—considering the quality—the price is right.

The \$1,895 base configuration of the 16-MHz PC Link 386-16 comes with 1MB of 100-nanosecond RAM on the motherboard, a 220-watt Tri-Mag power supply, a 1.2MB Toshiba floppy disk drive, a flop-

py/hard disk controller, an Everex card with serial and parallel ports, and a Key Tronics Enhanced-style keyboard. A similarly configured 20-MHz PC Link 386-20, with 1MB of 80-ns. RAM, goes for \$400 more. MS-DOS 3.3 adds \$95 to the price; 4.01 adds \$119.

Externally there's no difference between PC Link's 16- and 20-MHz machines. Both come in sturdy AT-size desktop cases with three open half-height bays. The front panel offers a key lock, indicator lights, and a reset switch.

At the heart of each machine is the reliable and handsome Hauppauge Computer Works 386 motherboard. Near the front of the motherboard are 1MB of 256-kilobit chips, the 80386, and a socket for an 80387. The motherboard doesn't use on-board cache, but its memory is four-way interleaved, and the ROM BIOS and video BIOS can be moved into shadow RAM.

Our tests showed that the 16-MHz model generally performs at the faster end of the spectrum. The early model of the 20-MHz motherboard we tested performed somewhat less impressively, but PC Link plans to ship an improved version with the 386-20.

On the left side of the motherboard in each unit is a proprietary 32-bit slot for Hauppauge's memory cards; you can add up to 14MB of RAM to the 16-MHz model, 64MB to the 386-20. Next are three 8-bit slots followed by four 16-bit slots. Five knockouts on the back panel let you mount extra ports without wasting slots.

For compatibility's sake, the Hauppauge motherboard keeps things sane and simple. Unless you run a TSR that lets you throttle back by pressing Ctrl-Alt-Minus, the board runs at only one speed. You can configure the Award BIOS by pressing Ctrl-Alt-Esc before DOS starts to boot, but those keys have no effect when you're running DOS or an application. A setup program on-disk is always available from the DOS prompt, and a configuration program lets you add two custom entries to the hard disk parameter table. For fancier memory management, a copy of Quarterdeck's QEMM-386 utility is included.

The components are good enough to make you forget about the 1-year parts-and-labor warranty. For monochrome systems, PC Link sells the Hercules Graphics

High-quality workmanship and U.S.A.-made, brand-name electronic components are hallmarks of the sturdy PC Link 386-16 and 386-20 systems. Among the components of the desktop-AT-style 386-20 were Hauppauge Computer Works' reliable 386 motherboard, which runs mostly at one speed.

Card Plus; for color systems, the Video Seven VGA card or the 16-bit Video Seven VRAM VGA card. PC Link offers about ten different flavors of hard disks and Sysgen tape backup units. If you don't like the mushy feel of the Key Tronics keyboard, you can have a clickier Chicony model. And the Hauppauge motherboard is so thoughtfully designed that you can even plug in the old PC- or XT-style keyboard and make a quiet protest against the "Enhanced" standard imposed by IBM.

The 16-MHz machine tested in PC Labs came with a Miniscribe 40MB hard disk connected to an NCL controller. The 20-MHz machine had CDC's 90MB ESDI disk connected to a Western Digital controller and also included a 1.44MB Toshiba floppy disk drive. Both machines were fitted with Video Seven's 16-bit VRAM VGA card and NEC MultiSync II monitors, and each included a 2MB memory card fitted with 1MB of RAM.

PC Link's computers don't have the kind of streamlined cases, LED displays, or exotic hardware that will make your friends envy you for a few months—until the next fancy machine hits the streets. But if you buy one, you'll probably feel quietly proud of your good sense and eye for quality. —Edward Mendelson

FACT FILE

PC Link Corp.

PC Link 386-16

List Price: With 1MB RAM, 1.2MB 5¼-inch floppy disk drive, \$1,895; with 70MB hard disk, monochrome monitor, DOS 3.3, \$2,950; with VGA monitor, \$3,450; with 2MB RAM, 40MB hard disk, 80387 coprocessor, \$4,795. 1MB RAM upgrade, \$995; 150MB hard disk with ESDI controller, \$1,600; 60MB tape backup, \$659.

CIRCLE 623 ON READER SERVICE CARD

PC Link 386-20

List Price: With 1MB RAM, 1.2MB 5¼-inch floppy disk drive, \$2,295; with 70MB hard disk, monochrome monitor, DOS 3.3, \$3,350; with VGA monitor, \$3,850; with 2MB RAM, 90MB hard disk, 1.2MB 5¼-inch and 1.44MB 3½-inch floppy disk drives, 80387 coprocessor, \$6,375. 1MB RAM upgrade, \$1,095; 150MB hard disk with ESDI controller, \$1,600; 60MB tape backup, \$659.

CIRCLE 624 ON READER SERVICE CARD

In Short: PC Link's computers, built around the Hauppauge motherboard, use the highest-quality components, run at good or better speed, and offer all the options that anyone except a hot-rodder could ask for. At \$1,895 for a 16-MHz base system without hard disk and video, the price is better than reasonable.

386-based PCs: Summary of Features

The following commentary analyzes some of the terms in this table of features. The phrases in bold type are listed in the same order as in the left-hand column of the table.

Basic configuration This price represents the most stripped-down machine the vendor will sell, typically including 1MB RAM, one floppy disk drive, and serial and parallel ports. Note that these prices are not always strictly comparable because some vendors will not sell their computers without a hard disk or with less than 2MB RAM. Therefore, when comparing products, please consult the "standard configuration" prices as well. (All prices in this features table are subject to change.)

Cost of DOS 3.3/OS/2 DOS is sometimes included in the basic configuration; in other cases, it has a separate price. OS/2 can sometimes be purchased with a system, but it is not available from all vendors.

Hard disk options For buyers seeking specific configurations, some vendors offer more flexibility than others. The number of different hard disks the vendor offers for a machine is often indicative of how much customizing is available. Keep in mind that it is sometimes far more cost-efficient to buy your computer and hard disk from different vendors.

Reset switch Many computers now come with a reset switch allowing a cold reboot of the computer. This switch saves wear and tear on the power switch.

Standard configuration For the sake of price comparisons, our "standard" configuration normally includes 1MB RAM, a 60MB hard disk, at least one floppy disk drive, a monochrome monitor, at least one parallel and one serial port, DOS, and a keyboard. Because the closest approximation of our standard package may differ from this configuration, the price of each system is followed by the total RAM (if the package includes more than 1MB) and the size of the hard disk (if other than 60MB). Where no price appears, the vendor does not sell a system that conforms to at least five of the parameters we have designated for a standard machine—which means merely that the reader will have to use other information in comparing prices.

Tested configuration The specifications of the evaluation units depend on what configuration each manufacturer has sent us (based on our guidelines). The list price cited always includes DOS.

Bus clock speeds Bus speed becomes more important as computers run at faster clock speeds. A computer's bus speed may actually be too fast for expansion cards, most of which operate at 8 or 10 MHz. Time-out periods, sometimes called wait states, are often used to slow down the bus.

Disk controller manufacturer and type (Interface/encoding) Several interfaces are used to control the way data is transferred from the hard disk to the computer. The most common disk interface standard is the ST-506/412, used in the IBM PC-XT and PC AT. Two other common data transfer interfaces are SCSI (Small Computer System Interface) and ESDI (Enhanced Small Device Interface). Both SCSI and ESDI require special hard disk controllers and cannot run off existing PC-XT or PC AT controllers.

Disk encoding techniques currently include RLL (Run Length Limited) and the older MFM (Modified Frequency Modulation) scheme. All data is encoded onto and read from your hard disk as a series of polarity-reversing bits representing ones and zeros. Nine such bits would be needed to store 12 bits of data in MFM format, and only six polarity changes are required with RLL format; thus, MFM takes more space than RLL but provides a more stable environment and is more commonly used. ST-506 technology, for instance, uses the MFM encoding scheme.

BIOS version and date The BIOS date is important to those planning to use 3½-inch disk drives. Early BIOS versions cannot handle this format. (In some cases the vendor would not release this information.)

Memory chip type In this context, Kb and Mb refer to kilobits and megabits, respectively.

Chip packaging Memory chips come in a variety of styles: DIPs, SIPs, and SIMMs. The Dual In-Line Package (DIP) is the traditional buglike computer chip sprouting 8, 14, 24, or even 40 or more metal legs (evenly divided between right and left sides). Single In-Line Packages (SIPs) are single-package arrays of computer chip logic assembled so that all connecting legs are in a straight line, like the teeth on a comb. Single In-Line Memory Modules (SIMMs), on the other hand, are individual logic devices that are installed on their own small circuit board, cradling a component module that can be plugged into a larger device. Their physical arrangement duplicates the integrated structure of a SIP but allows for the possibility of replacing an individual memory component if necessary.

RAM chips RAM chips come in two basic types: static and dynamic. Static RAM chips (SRAMs) are faster and more efficient but costlier. Dynamic RAM chips (DRAMs) cost less and are more common, but the trade-off is in slower processing and operation.

Static column RAM uses SRAM chips arranged electrically as pages (using column address) rather than as individual words or bytes (using row address). Paging is desirable because the 80386 contains a prefetch instruction that allows it to deal with a full page of RAM.

Interleaved memory CPU speed is usually faster than memory speed. Interleaved memory increases processing speed by splitting the memory into two or more portions. The CPU then sends information to a section at a time, allowing one section to process while another receives data.

Shadow RAM Shadow RAM is a technology that loads system BIOS and/or video BIOS directly into fast RAM on boot-up of the computer. The BIOS then operates much faster.

Disk cache software Some companies provide their own software to facilitate caching. Other computers can generally take advantage of the caching facility within some version of DOS.

Maximum 32-bit RAM There is currently no standard for 32-bit cards, and not many cards are available today. Many computer manufacturers, however, have designed their own 32-bit slots for memory expansion cards. The availability of 32-bit slots for memory cards is especially important in the era of OS/2, a memory-hungry operating system.

FCC certification class Two classes of FCC (Federal Communications Commission) approval may be given to computers: Class A and Class B. These classes concern levels of radio-frequency interference. With Class A approval, a computer may be operated in a business locale. The tougher Class B rating allows home use as well, where computers are likely to be placed near radios and television sets.

Certification tests must be performed by private testing companies. The passing results are then sent to the FCC for final certification, a process that can take several months.

We keep telling people
this is not a laser printer.

The new \$995 HP DeskJet PLUS Printer.

But they keep looking at the evidence.

Mr. Arnold N. Jones
220 Bush Street, Suite 645
San Francisco, CA 94104

Dear Reader:

Designs being able to put out merged text and graphics that look like the real thing is a fact. And your choice will thank you're using a laser printer. You thank you're using the 1995 HP DeskJet PLUS printer instead.

This is one of many business charts you can print out on the new HP DeskJet PLUS printer. Software for this text and graphics demonstration by Harvard Graphics.

Massive.

Alan Grube
Alan Grube

One report you can print out on the new HP DeskJet PLUS printer. Software for this text and graphics demonstration by Harvard Graphics.

We call it a print-out. It's a print-out. It's a print-out.

OK, maybe it's a print-out. It's a print-out. It's a print-out.

THE TIGER

Tiger! Tiger! Burning bright
Were you made by laser light?
No, I'll tell you what made me —
A Hewlett-Packard printer from HP!
(With apologies to William Blake)

MegaCorp 1988 Sales History

You won't believe your eyes (or ears), either. The HP DeskJet PLUS printer gives you the same crisp, black lettering. Clean, sharp graphics. And whisper-quiet operation. But it uses advanced inkjet technology to supply these laser-like qualities for the price of a 24-wire printer.

For just \$995, you get 300 dpi in a trim 15-pound package that's twice as fast as the original. What's more, it has built-in landscape and improved font selection. Including ten built-in fonts and over 100 optional fonts, with sizes up to 30 points. And its 20,000-hour MTBF

assures a long, happy life.

So call 1-800-752-0900, Ext. 276J for the name of your nearest authorized HP dealer. Then judge the HP DeskJet PLUS printer for yourself.

Power

T5200: 20MHz 386 processor, 2 internal IBM-compatible expansion slots, VGA gas plasma display with VGA monitor port, 40MB or 100MB hard disk, 2MB RAM standard expandable to 8MB, 1.44MB 3 1/2" diskette drive.

At Toshiba, we're not only committed to making computers more portable, but also to making portables more powerful.

Which is why, in our effort to constantly improve and refine our machines, we've added three new computers to what is already the most complete family of truly portables available.

Each designed to be powerful enough to take on the increasingly complex tasks that face today's sophisticated PC users.

First, the T1600 which weighs under 12 pounds and which is the fastest battery-

powered computer we've ever made.

Second, the T3100e, the successor to our most popular machine—the T3100/20. We've made it nearly two pounds lighter and a lot faster—we've even added expansion capabilities. About the only thing we didn't add was more size.

T1600: Battery-powered 286/12MHz, coprocessor socket, 20MB hard disk at 27ms/c, 1.44MB 3 1/2" diskette drive, 1MB RAM expandable to 5MB, detachable backlit EGA compatible LCD, removable rechargeable battery pack.

Toshiba is the world leader in truly portable PCs and manufactures a complete line of high quality dot-matrix and laser printers. For more information call 1-800-457-7777. All Toshiba PCs are backed by the Exceptional Care program (no-cost enrollment required). IBM is a registered trademark of International Business Machines Corporation. Model T5200 has not been approved by the Federal Communications Commission. This device is not, and may not be, offered for sale or lease, or sold or leased until the approval of FCC has been obtained.

Surge.

And finally, the T5200, which has enough power to replace virtually any desktop PC.

But we haven't just concentrated on power and portability. We've also constantly looked for ways to make our machines more durable, more reliable, and easier to use—down to the 800 number our customers can call for help with any technical question that might come up.

We figure that's what our users demand.

And it's by anticipating the growing needs of our users that we have continually found ways to make our machines weigh

less and do more. So you can work wherever you want and however you want.

All of which might make it tempting for some people to abandon their desktop for the convenience of portability. Go ahead.

We've given you the power to do it.

T3100c: 12MHz 286 with 80287 co-processor socket, internal half-length IBM slot, 20MB hard disk with 27 msec access, 1MB RAM expandable to 5MB, gas plasma display, 1.44MB 3½" diskette drive.

SANYO BUSINESS SYSTEMS CORP. SANYO MBC-18 PLUS

Sanyo's small-footprint 386 PC, the MBC-18 Plus, seems to be designed for customers with modest expectations, good eyesight, and either a clear understanding of their future needs or a reliable dealer.

You'll need modest expectations because you'll have one of the slower-performing 16-MHz machines, with only three slots left for expansion after you add a hard disk controller and a video card. You'll need good eyesight because the only color video card Sanyo sells is a primitive CGA adapter. And you'll need either a clear understanding of your future needs or a good dealer because you probably won't want to brave the inside of this unconventionally built machine to install any options on your own.

Sanyo's pricey \$3,499 basic configuration gives you 1MB of zero-wait-state 85-nanosecond RAM, a 1.2MB floppy disk drive, a serial and a parallel port, and MS-DOS 3.3 and GW-BASIC. For \$1,699 more, you can add 2MB RAM on an expansion card that lets you plug in a total of 14MB.

Sanyo offers a 25MB hard disk for

The small footprint of the 16-MHz Sanyo MBC-18 Plus is welcome, but the unit is limited. The machine has only six slots, and the only color video card Sanyo sells is a CGA. In addition, the unconventional design makes it unlikely that you'll want to add future options on your own.

\$479, a 40MB disk for \$799, and a 50MB disk for \$549. The 40MB disk costs more than the 50MB because it has a 28-millisecond access time, while the larger one trails behind at 45 ms.

If you decide to install these or any options without your dealer's help, you'll have to remove the system's top panel and hold it with one hand while you simultaneously remove both of the now-loosened side panels. If you want access to the three drive bays, you must first unscrew the front panel, then confront an inner metal

Sanyo's 386 seems aimed at users with modest needs.

cover that blocks the expansion slots.

Sanyo uses a backplane design, with the CPU, 1MB of RAM, and the serial and parallel ports and floppy disk drive controller on a system board in one of the six available slots. If you want to install an 80387, you must first detach a small tangle of unlabeled wires that obstruct the board at the top.

To install any more 32-bit RAM, you plug Sanyo's proprietary memory board into the adjacent 8-bit slot and fit a 32-bit connector at the top of the memory board into the system board. That leaves you with one 8-bit and three 16-bit slots free. One slot takes a hard disk controller, and another takes a video card. Sanyo sent us a system with an 8-bit Scurry Magic VGA card and a Goldstar monitor, but the company will sell you only a monochrome card or a combination monochrome/CGA card that can give you CGA graphics on a color or monochrome monitor.

Sanyo supplies its own Enhanced-style keyboard, which has a loose touch, and its own BIOS. Earlier models of Sanyo's BIOS were notorious for software incompatibilities, but we had no trouble with this version. If an application should ever lock up, though, be careful when pressing the

FACT FILE

Sanyo Business Systems Corp.
Computer Division
51 Joseph St.
Moonachie, NJ 07074
(201) 440-9300
(800) 524-1021

List Price: With 1MB RAM, 1.2MB 5¼-inch floppy disk drive, DOS 3.3, \$3,499; with 50MB hard disk, monochrome monitor, \$4,222; with CGA monitor, \$4,472; with 3MB RAM, 40MB hard disk, \$6,421. 2MB RAM upgrade, \$1,699.

In Short: Sanyo's small-footprint 16-MHz machine is an undistinguished performer with limited options (no EGA or VGA) and an inconvenient nonstandard physical layout. The price is on the high side for this class of computer.

CIRCLE 627 ON READER SERVICE CARD

reset switch in the back. The switch is deeply recessed in an opening that you can reach only with a narrow object like a ball-point pen. Because the opening also gives access to a block of DIP switches, you can easily hit one of these by mistake and reconfigure the computer without noticing that you've done anything wrong.

—Edward Mendelson

SPEAR TECHNOLOGY INC.

**SPEAR 386A/16
SPEAR 386D/20**

From the outside, Spear Technology's two 386 machines—the 386A/16 and the 386D/20—are indistinguishable from one another. Both have a sturdy, AT-style cover and a front panel sporting the usual LED indicators and reset button, and both use the Mitsumi Electric keyboard, a good model with a springy feel to it. Likewise, the 16- and 20-MHz systems come with equally attractive base price tags—\$1,790 and \$2,080, respectively.

The machines also share a number of functional similarities. During a cold boot, pressing Esc will terminate the RAM check—a useful shortcut. Pressing Del after the hardware self-test will call up the

On Time and Under Budget

ViewPoint is the acclaimed project management program designed to manage multiple projects, across divisional boundaries, using the same resources.

Profit from a Different Point of View

Create the necessary visibility to get management consensus *before* adding detail to the plan. ViewPoint's mouse driven, point-and-click operation makes on-screen modeling easier. Speed up project development or defining reports with templates from ViewPoint's library.

Adopt ViewPoint and Trace Overloads

Interactively fine-tune projects without delaying finish dates or deliverables. Resource Load Trace uniquely finds solutions when conflicts arise and traditional methods like Leveling and Constraining won't work to resolve them.

ViewPoint Activities are Well Connected

Import and Export ASCII, dBASE or Lotus files and save milestone events for auto-linking. Display project status

with presentation-quality charts on printers and plotters. Preview everything on-screen; or save reports to disk and use the mouse to scroll around them.

Plan for Today as well as Tomorrow

Maintain planning flexibility with non-linear resource distribution, earned-value and what-if analysis, multiple rate costing and resource roll-up. ViewPoint is the visual resource management tool to solve today's planning problems as well as tomorrow's.

If you're ready for a new ViewPoint, call CAM. We provide three days of training with every copy. For more information call 1-800-635-5621 and we'll send you a comprehensive brochure and demo disk.

■ 80386 DESKTOP PCs

Like its look-alike 16-MHz counterpart, Spear Technology's 20-MHz Spear 386D 20 allows you to set the six 16-bit slots to either one or two wait states, for speed or compatibility. You do get an AT-style case, but the location of the coprocessor socket under the hard drive is a design flaw.

setup program embedded in ROM. And you can shift the systems between high speed and 8 MHz at any time from the keyboard.

Both machines use an AMI BIOS. They come with DOS 3.3 and GW-BASIC, but you don't get any extras such as diagnostics software or a disk-caching utility. OS/2 isn't an option either.

SPEAR 386A/16 Under its cover, the 386A reveals a sturdy chassis and generally solid workmanship, although a jumper fix was visible on the motherboard. There are two 8-bit slots and six 16-bit slots, all full-length. One hard disk and one single high-density floppy disk drive were included in our \$3,615 test configuration, leaving three empty half-height drive bays. An Everex MFM disk controller, an 8-bit Orchid VGA card, and a parallel and serial port card filled three slots, leaving ample room for expansion.

The 386A runs at a constant bus speed of 8 MHz, while the 386D's bus speed is fixed at 10 MHz. Both machines, however, have the unusual ability to allow you to set the 16-bit bus slots at one or two wait states, allowing you to choose between optimal speed and compatibility. The 386A also allows you to select from four, five, or

six wait states for the 8-bit bus slots.

You have the option of ordering either 1MB or 4MB of 32-bit RAM on the Spear Technology/AMI motherboard. While you can bring the total system RAM up to 16MB, the lack of any 32-bit slots means that the additional memory can be added only via 16-bit expansion boards, something of a drawback. A 64K static RAM cache with proprietary cache controller helps maintain the unit's zero-wait-state performance.

The DIP switches on the unit are fairly accessible. Unfortunately, though, the socket for an optional 80287 coprocessor is not. It is hidden under the hard disk, which you must remove before inserting the chip.

While the 44MB Seagate drive turned in a middling access time of just under 40 milliseconds on our benchmark test, in most of our BIOS Disk Seek tests, the 386A proved itself a good performer.

SPEAR 386D/20 The 386D differs from its sibling in more than just processor speed. It offers six full-length 16-bit expansion slots and two proprietary 32-bit slots for memory cards. Two slots on the \$4,676 test unit were taken up by the VGA card and a DTC ESDI controller, while one parallel and two serial ports were mounted on the proprietary motherboard, saving a slot.

A 156MB ESDI Toshiba hard disk filled two of the five half-height drive bays. The disk displayed a respectable access time of just under 24 ms, but unfortunately failed to operate when running the CPU at 8 MHz. A tech support person at Spear said that this problem was caused by the ESDI controller, and that the only way to gain access to the disk at both speeds was to reformat it with a 2:1 interleave instead of the optimal 1:1 interleave.

The motherboard can hold only 1MB of RAM, but you can add memory via proprietary 32-bit boards with 1-, 2-, 4-, or 8MB capacities. There's no memory cache or interleaving, but a page-mode scheme speeds up the 60-nanosecond chips.

Although the 386D delivered fair performance on most of our benchmark tests, it took an inordinately long time to run the extended memory read and write tests (rendering this RAM unusable). Spear

CIRCLE 664 ON READER SERVICE CARD

In Short: The Spear 386A/16 and 386D/20 offer attractive prices, flexible configuration options, and good performance in most areas. We did encounter a couple of problems in getting the 386D/20 to run properly, though.

Technology told us that this was because a jumper had been incorrectly set to make use of a math coprocessor that wasn't installed.

Resetting the jumper solved the problem (though not in time for testing), but since it was located under the hard disk, it required deft maneuvering with a pair of pliers and a flashlight. The company admitted that a number of units had been shipped with the jumper set in the wrong position and that the settings were incorrectly documented in the manual.

As with the 386A, the coprocessor socket is inconveniently placed under the hard disk drive. A set of DIP switches is also partially hidden by the hard disk.

While the prices for the Spear Technology 386s are pleasingly reasonable, the problems we encountered with the 386A during our tests did not inspire confidence in the reliability of this company.

—Robert Kendall

Hatfield.

McCoy.

We had these two talking in no time at all.

Seems like every time these two boys set down together, they commenced to fightin'. If one said day, the other night. Good thing the folks at TOPS settled this feud once and for all. It's so dang simple, too. Just install TOPS software in each Macintosh and PC in the place. Throw in a network card for each PC. Add a little twisted-pair telephone wire, and suddenly they're behaving like family.

TOPS Tech Specs

- One copy of TOPS software required for each network station.
- TOPS supports AppleTalk and FlashTalk running on twisted-pair cabling (telephone wire), and EtherTalk on thick or thin Ethernet cabling.
- IBM PCs, PS/2 Models 25 or 30, or compatibles require TOPS FlashCard, 3Com EtherLink II or other network card. PS/2 Models 50 through 80, or compatibles require 3Com EtherLink/MC card or equivalent.
- TOPS can be configured as a distributed, dedicated, or combination network.

Next thing you know, they're swapping files, sharing peripherals, and trading data from Lotus 1-2-3 to Excel, dBase III to dBase Mac, and most other PC and Mac applications. Or tapping into whole other networks and systems, such as Novell, AppleShare, Sun, and VAX.

What's more, no central file server is needed—though TOPS can easily accommodate one as a business grows. And no special training is required. No wonder TOPS is the standard for easy-to-use PC to Mac connectivity.

Maybe that's why folks say, when it comes to making connections, TOPS is the real McCoy. Call the TOPS Division of Sun Microsystems at 800-445-TOPS (from outside the U.S. and Canada, call 415-769-8700). Or write 'em at TOPS, 950 Marina Village Parkway, Alameda, CA 94501.

TOPS[®]

When you need connections.

WE HAVE WAYS TO MAKE YOU SCREAM.

First take an Intel® Math CoProcessor. (Any of the 11 will do.)
Apply with slow, firm, steady pressure into the appropriate
socket in every IBM® or compatible PC.

Then sit back and enjoy as over 160 database, spreadsheet,
CAD or business graphics programs scream through functions

up to 500%* faster. For more information, contact your local dealer. Or call (800) 538-3373 for "Intel Math CoProcessor Technotes," a collection of benchmarks and software lists. And end the torture of slow software.

CIRCLE 517 ON READER SERVICE CARD

TANDON CORP. TANDON 386

The world is populated with peripatetic individuals who want not only to enjoy their mobility but also to transport their "stuff" with them. Here's a computer that allows you to have your data and carry it home, too.

The Tandon 386 is base-priced at \$4,199, but fully configured with Tandon's own equipment, including a color monitor, an EGA Card, a 110MB hard disk, and a 30MB Personal Data Pac, our test unit cost \$6,599.

The Personal Data Pac is a durable, efficient, removable drive powered by an RLL controller with a 128K built-in cache; it's roughly the size of one of those zucchini breads your neighbors keep forcing on you, but immensely more useful.

Other noteworthy features on the Tandon machine include built-in 64K caching, with zero-wait-state operation, and 100-nanosecond 256-kilobit DRAM SIMM chips on the motherboard (the test system had 2MB using 256Kb chips, but up to 8MB of 32-bit memory is possible with 1-megabit chips).

On the downside, there's no 32-bit slot

to accommodate a card with additional memory, although one is planned for a future release. Also, the Data Pac is both ejected and protected from ejection by software. But if you can no longer access your hard disk, you'll have to remove the cover and use some elbow grease. It's possible with a little effort, but you may find it frustrating.

ALL BUNDLED UP Tandon DOS 3.3 is included in the bundled software. One problem, though: Tandon DOS 3.2 was on the Data Pac, and Tandon DOS 3.3 was on the hard disk. As of this writing, all the Tandon systems are being shipped this way. A quick SYS and copy of COM-MAND.COM put them both on an even keel with DOS 3.3. In addition, the company has included the checksum for the Tandon MS-DOS utility files. Checksums are of interest to programmers and to those wanting to keep a record of files to protect them from possible virus attack.

You'll also have at least one instant 386 application: *Microsoft Windows/386* Presentation Manager. Other software includes GW-BASIC, EGA Card utilities, and Data Pac utilities. The Data Pac utilities allow hotkey eject customization, copying from one Data Pac to another, set-up of your RLL controller, and head parking for both the Data Pac and your conventional disk.

Play it safe when it comes to accessing your DataPac; also, be sure to install the DPACCESS driver on your boot directory and call it from your CONFIG.SYS file. Tandon has supplied this driver because its version of DOS 3.3 requires it, and also in case the computer is used with a version of DOS or another environment, like OS/2, that does not support removable drives.

The Tandon 386 was no speed demon on our benchmark tests, but it did beat out approximately one-third of the other 20-MHz 386 computers tested.

But if what you're looking for is a 16-MHz model, Tandon also offers a 16-MHz (switchable to 8-MHz) 386 machine with or without a 40MB hard disk; the 64K RAM cache is optional. Prices for the Tandon 386/16 are \$3,599 without a hard disk and \$4,399 with the 40MB hard disk.

Overall, you'll find the 20-MHz Tandon 386 a solid machine, especially for

Tandon Corp.
405 Science Dr.
Moorpark, CA 93021
(800) 228-8595
(805) 378-3068

List Price: With 1MB RAM, 1.2MB 5¼-inch floppy disk drive, DOS 3.3, \$4,199; with 40MB hard disk, monochrome monitor, \$5,279; with VGA monitor, \$6,147; with 2MB RAM, 110MB hard disk, receptacle for removable 30- or 40MB Personal Data Pac, \$6,599, 1MB RAM upgrade, \$665.

In Short: A reliable 386 with adequate speed, the Tandon 386 has more options than most candy-store kids could want; but this kid still wishes for a 32-bit slot. The high-end version is a data security specialist's dream with a removable 30MB Personal Data Pac.

CIRCLE 558 ON READER SERVICE CARD

those wanting the security of a removable hard disk. You can work on your sensitive data during the day and then store it away from curious eyes in your safe at night. Other pluses include the bundled utilities and software, as well as clear documentation. However, you just might want to wait until Tandon comes out with the 32-bit-memory-slot version.

—Pamela J. Millard

TANDY CORP.

**TANDY 4000
TANDY 4000LX
TANDY 5000MC**

When Tandy recently introduced the 5000MC, it became the first company to release a machine compatible with IBM's Micro Channel architecture (MCA). The system is the newest of Tandy's three 386 machines, right behind its two conventional AT-bus PCs, the 16-MHz Tandy 4000 and the 20-MHz Tandy 4000LX.

The base price of each of the machines—\$2,599 for the 4000, \$3,999 for the 4000LX, \$4,999 for the 5000MC—includes a floppy disk controller, a 1.44MB

The Tandon 386 includes a 30MB Personal Data Pac, the company's own durable, removable hard disk drive, to make moving data easy and efficient. The Data Pac is powered by an RLL controller with 128K cache.

**How To Bring
Minicomputer Power
To Your PC**

Introducing PC-MOS™ 3.0

A multiuser system no longer means only a mainframe or minicomputer. Today's 386- and 286-based PCs are more powerful than the minicomputers of just a few years ago. And they often provide more desktop power than one person can use effectively. That's why you need PC-MOS 3.0. It harnesses the power of your 386- or 286-based PC and turns it into a powerful multiuser, multitasking computer. PC-MOS DOS applications such as Windows®, Lotus 1-2-3®, dBase IV™ or WordPerfect™—without modification.

PC-MOS is the perfect solution for a small business or a department of a large company that needs users to easily and affordably share programs, databases or peripherals. It takes full advantage of the hardware's power—and saves you money in the process! For example, instead of replicating PCs, each user can have an inexpensive terminal or monitor that acts like a PC.

DOS Compatibility Means Minimal Training And Support

Since PC-MOS is DOS compatible—unlike UNIX™ or OS/2™—there's no need for users to learn a "new" operating system or be retrained on the application programs they already know. And unlike most LANs, PC-MOS is easy to install and even easier to maintain. No hassle, no expensive wiring and no network

There are now more than 100,000 users of PC-MOS worldwide, but if you haven't seen it lately, take another look. We've broadened our base of compatible applications and added multi-level security, faster disk performance with Novell LANs, 3270 mainframe communications products and The Software Link's LANLink™ local area network.

Call us today for more information about PC-MOS 3.0 and the location of your nearest multiuser dealer. We'll show you how to easily and affordably turn your PC into a powerful multiuser system.

**BASIC ACCOUNTING SOFTWARE FOR
90% OF U.S. BUSINESSES!**

REAL ACCOUNTING FOR \$229.00

INTRODUCING PROFITWISE, a basic accounting software system designed to meet the accounting needs of many small businesses. Statistics show that only 10% of American businesses have sales over \$500,000 . . . PROFITWISE is real accounting for the other 90%!

PROFITWISE OFFERS WHAT NO OTHER PRODUCT OFFERS . . .

REAL ACCOUNTING Recognizing that businesses with lesser revenues need real accounting too, TLB Inc. has developed PROFITWISE, a specially adapted version of the powerful award-winning Solomon III system. PROFITWISE provides many of the features of Solomon III but limits the size of the accounting database. With PROFITWISE, you pay for only the features and transaction volume you need.

UPGRADE CAPABILITIES Everything you learn with PROFITWISE applies to Solomon III. You can easily and quickly upgrade to Solomon III at anytime. There is no need to rekey information because the PROFITWISE database is compatible with Solomon III.

TRAINING available nationwide.

UNSURPASSED TELEPHONE SUPPORT!

TLB HAS THE ANSWER TO ALL YOUR COMPUTER ACCOUNTING NEEDS . . .

FEATUREWISE . . .

■ BASIC ACCOUNTING \$229.00

General Ledger

- Extensive Annual and Periodic Budgeting capability
- User defined fiscal periods - past to any period
- Powerful report definition ability

Payroll

- Standard deductions and earnings type already set up
- Unlimited number of user defined deductions including 401K capability
- All Federal and State tables included
- Automatic W-2, 941 and state unemployment reports

Accounts Payable

- Tracks complete 1099 information
- Both past due and until due aging report formats

Accounts Receivable

- Open-item and balance forward customer accounts
- User defined terms and aging categories

Invoicing

- Automatic sales tax calculation
- Optional user-defined message on invoices
- Automatic backordering (w/inventory module)
- Service and Product invoices

Fixed Assets Depreciation

- schedules, acquisition and disposition
- Address: Prints lists, labels or index cards

PROFITWISE Basic Accounting must be installed prior to these add-on modules.

■ PROFITWISE INVENTORY & JOB COSTING \$229.00

Job Costing

- Automatic interface with Payroll and Accounts Payable modules reduces data entry
- Tracks jobs from bidding through completion

Inventory

- Automatically updates general ledger for COGS
- Automatically updated (by invoicing module)
- Average, standard or user specified cost methods

■ PROFITWISE REPORT & GRAPH DESIGNER \$229.00

Output

- Automatic formatted reports on screen or printer
- User formatted reports with multiple level subtotal breaks and grand totals
- Transfer of information to Lotus worksheets

Hardware Requirements: All IBM PC/XT AT 486/3 Compaq and 100% compatible PCs. PC/286 or less need 512 or higher address lines, minimum 10 megabyte hard disk storage, printer capable of printing 132 columns (printed or condensed).

■ 80386 DESKTOP PCs

3½-inch floppy disk drive, a 101-key keyboard, one serial and one parallel port, and a 192-watt power supply with four device connectors for the four possible half-height storage devices. DOS and BASIC are \$120 options; Tandy also sells OS/2 1.0 for \$325.

Almost all of the components are manufactured in-house, including motherboards, cases, power supplies, keyboards, floppy disk drives, and monitors. Like IBM and Epson, Tandy has a company policy against verbally identifying other component sources, even when the vendors' names are visible on the component. Our survey of the test machines revealed hard disk controllers from Adeptec in all three, video adapter cards that appear to be based on Paradise chips in the 4000 systems, and a CDC hard disk on the 5000MC. All three machines used Intel chip sets and 1988 versions of Phoenix ROM BIOS.

TANDY 4000 The Tandy 4000 is a fairly conventional 16-MHz 386 computer. The base model comes with 1MB of 100-nanosecond DRAM SIMM memory chips (64K is allocated to shadow RAM to improve video and system BIOS performance), runs at one wait state, and uses 1:1 page-mode memory interleaving. The default bus speed is 8 MHz, but conservative types will appreciate being able to switch to 6 MHz.

Slotwise, you get space for two 8-bit and six 16-bit boards, as well as Tandy's \$179 32-bit memory expansion card, which can accommodate 8MB of RAM. Combined with the 8MB of 32-bit RAM you can squeeze onto the motherboard, the total system memory capacity comes to a generous 16MB. Be warned, though: Tandy charges a whopping \$649 for each 1MB SIMM pack—more than most other vendors.

The floppy disk drive controller, capable of supporting two drives, is built into the motherboard. The motherboard will support an 80387 chip, as well as the Weitek 1167 and 3167 coprocessors.

The test machine, priced at \$5,047, included an SCSI Adeptec controller, 2MB of RAM, a 40MB 19-millisecond hard disk, and a very fine .31-mm-dot pitch VGA monitor with an 8-bit VGA card. In

The Tandy 5000MC is the first IBM Micro Channel-compatible machine to hit the market as well as the company's second 20-MHz 386, joining its AT-bus model 4000LX. Almost all the components are manufactured in-house, including motherboards, keyboards, and monitors.

general, the Tandy 4000 did reasonably well on all the benchmark tests, coming out with roughly average scores.

TANDY 4000LX The 20-MHz 4000LX mirrors the 4000 in its motherboard and its slot and memory configurations. Of course, the 4000LX's processor hums along at a speedier 20 MHz, settable to 8-MHz with software. And 2MB of 80-nanosecond RAM are included in the base price. You'll be grateful for the additional megabyte of memory, as upgrades for this machine come in 2MB bunches costing up to \$1,499 per bunch. Ouch!

The default bus speed is 8 MHz, but with software you can bump it to 10 MHz, which you should do immediately. While there's no memory caching, speedier performance is achieved through the allocation of 64K to shadow RAM and the second megabyte of RAM to interleaved memory.

The 4000LX comes with the same overly soft 101-key keyboard as the 4000. But unlike its 16-MHz counterpart, which enjoys an FCC Class B rating, the 4000LX is certified only for office use.

The evaluation unit, priced at \$6,947, included an 80MB hard disk and the same VGA controller and monitor found in the 4000. The hard disk included in the test model was rated at 28 ms., but Tandy says that the 80MB drives now sold are rated at a faster 19 ms.

In benchmark tests, though, the 4000LX performed a bit below average, lagging behind other 20-MHz units.

TANDY 5000MC Our processor and memory tests showed the 5000MC to be in the top bunch of 20-MHz computers. The unit's base price is a full \$1,000 higher than the 4000LX's, but some components that are not standard in the other system, such as a mouse port and VGA card, are built directly into the 5000MC's motherboard. Also built into the motherboard are the serial and parallel ports and the floppy disk controller. This space-saving approach leaves three 16-bit slots and three 32-bit MCA slots available. The fourth 32-bit slot holds the system's memory expansion board.

The standard configuration includes 2MB of 100-ns. SIMM chips and an 82835 memory cache controller chip with 32K of 35-ns. cache memory on the 32-bit expansion card. Memory interleaving, a fixed 10-MHz bus speed, and zero wait states are also hallmarks of this machine. The keyboard is the best Tandy keyboard I've ever worked with; it has sufficient response and click to let you know you've done something when you touch a key.

Tandy brings the car salesman's concept of "preferred options packages" to the computer world. Buying a unit preconfigured with one of Tandy's standard set of options can cost less than adding on the individual components later. For \$7,727, you can get a prepackaged system equipped, as our test unit was, with an 80MB 16-ms. CDC hard disk, a .31-mm-dot-pitch VGA monitor, and DOS.

The only drawback to the 5000MC is a flimsy plastic rod that extends from the

OF THE TWO FASTEST NETWORKS, ONLY ONE IS IBM-COMPATIBLE, USES PURE MS-DOS OR OS/2, AND ALLOWS PEER-TO-PEER SHARING

POWERLan™

So what does a pure MS™-DOS and NETBIOS-based network buy you?

A familiar operating environment. No need to introduce proprietary operating systems and disk formats. You get direct MS-DOS file sharing. Use NORTON Utilities® if you want. You can even borrow a server to run MS-DOS or OS/2™ standalone if needed without reformatting the disk!

Ease of use. Simpler, less time-consuming installation. Easy maintenance by PC-literate staff, even first-time users!

Immediate access to latest technology in peripherals. No need to wait for special drivers. If it runs on MS-DOS, it runs on POWERLan.

Immediate use of a myriad of network applications. Like communications gateways and databases. And we don't mean a limited set of applications that run on a NETBIOS emulation and are available from only one source.

Speed. Pure MS-DOS servers are fastest for MS-DOS users! Ask about POWERLan benchmark results!

POWERLan PC networking products include:

- POWERLan /4, /8, or /+ — LAN software for 4, 8, or an unlimited number of users
- POWERserve™ — a dedicated file server of unequalled speed and capacity
- POWERsave™ — automated backup and archive facility for all hard disks on the network (even Novell tool)
- POWERmirror™ — volume or disk mirroring system for fault tolerance
- POWERbridge™ — a transparent bridge between any two NETBIOS networks

CIRCLE 630 ON READER SERVICE CARD

In Short: Tandy's 386 computers start out attractively priced, but adding everything from a hard disk on up gets expensive. The best deal here is the 16-MHz offering, but the 5000MC is compelling as well, because it's the first MCA compatible to make it to market. The 5000MC also has the best keyboard on a Tandy since the Model 1000 and a larger footprint for those who want MCA and room to expand along with it.

front power switch to the back of the machine, where it mechanically pushes another switch to turn the system on. While this didn't cause any problems during our tests, it sure looked as if the rod could easily detach from its connecting parts.

Tandy's strongest point is its thousands of retail outlets. While you can purchase these 386s only at Tandy Centers or authorized dealer franchises, you can take them to any of the roughly 7,000 Radio Shack retail locations for service.

The AT-bus machines are good, but the

Fastback Plus

Without warning, your hard disk fails, an electrical storm blitzes your data, or you accidentally delete your entire set of budget worksheets.

One of the fastest, easiest, and least expensive ways to protect against data loss is to invest in Fifth Generation Systems' Fastback Plus. Version 2.01 wins the prize for speed, convenience, and user interface that respects the level of sophistication you demand from a backup program.

Backup and restore are launched from a convenient file automatically, if you want to bypass the manual.

**PC
MAGAZINE**

tinely. As for speed, Fastback Plus is ready for the next backup diskette before you finish labeling the one you just removed.

Fastback Plus takes the guesswork out of the backup process by showing subdirectories and their contents on a split screen. Files can be selected for backup by name, date range, directory, or archive bit, or they can be marked individually. A particularly nice feature is Fastback's ability to estimate the

Fastback Plus

Fastback—a program that backs up your hard disk—at first, and it is reliable. Now Fifth Generation has improved it. The company fixed the manuals and then put in help files that make the manuals nearly superfluous. Then it added data compression to save disk space and a utility that estimates how many floppy disks and how long the job will take.

With this program, we've copied 38 megabytes of data from one machine to another in 28 minutes (which included formatting the disks). Fast-

Fastback Plus 2.01: No More Backup Excuses

HANDS ON

BY EDWARD MENDELSON

The best backup program is the one that gives you the fewest excuses not to use it. Fifth Generation Systems' \$189 Fastback Plus, Version 2.01, pulls out the rug from under almost every antbackup excuse you can imagine.

Do your backups take too much time? Fastback Plus backs up 10MB of a real-time hard disk to a single drive in 4 minutes, "yourself" by

in the program's user interface.

Fastback Plus gets more backing than any other backup program. From reviewers, users and corporate MIS. In fact, it's now the standard by which all other backups are judged.

Fastback's incredible speed, ease of use and proven reliability make backing up a regular routine. This assures users of having data protection at all times. PC Magazine said it perfectly: There are, "No More Backup Excuses."

Isn't it time you gave your data the protection it deserves? With the best backup the industry has to offer? Fastback Plus.

JS EDITOR'S CHOICE SOFTWARE

SYSTEMS BUILT WITH QUALITY AND CARE.

At Dataworld, we know there's no substitute for quality. Every part, every circuit, every peripheral we use is of the finest products in its class. We know that cutting corners only lessens reliability. You'll find our systems work faster, more efficiently, and more reliably than comparable higher-priced systems. And since you buy factory-direct from Dataworld, you benefit from the most competitive prices available.

CAN'T WAIT FOR A SERVICE TECHNICIAN ? INTRODUCING DATAWORLD'S REMOTE DIAGNOSTIC SERVICE.

With a Dataworld computer system, you may never have to wait for an on-site service technician again. This is because each system we sell comes with the "host" portion of pcANYWHERE III ® (PC Magazine Editor's Choice) -- the most advanced remote software ever developed for a PC. With your phone line and modem, our technical staff can use pcANYWHERE ® to diagnose problems and provide solutions, thereby minimizing your downtime.

OUR SYSTEMS WIN AWARDS. REPEATEDLY.

Our 386/16 computer recently was awarded Editor's Choice by PC Magazine and received high marks from Byte magazine. Last October, our Portacomp II also received Editor's Choice. Last July, our DATA-286 turned in the highest performance figures among the systems reviewed.

OUR WARRANTY IS YOUR GUARANTEE.

Any system ordered from Dataworld includes a 30-day money back guarantee. Our commitment to quality and customer satisfaction has made Dataworld one of the most respected companies in the industry.

Every Dataworld system also comes with a limited one-year warranty on parts and labor. During this period Dataworld will repair or replace any defective items returned.

5000MC is the most interesting and, in general, the fastest of the three. If you're ready and willing to part with the extra money for a nonstandard speed racer, the 5000MC won't disappoint you.

—Bruce Brown

TATUNG COMPANY OF AMERICA INC. TATUNG TCS-8000

At first glance, the \$3,995 base price of the 20-MHz Tatung TCS-8000 seems high for a unit equipped with only an average list of components. The standard complement of 1MB of RAM, 1.2MB floppy disk drive, Western Digital controller, parallel and serial ports, keyboard, and DOS 3.3 with GW-BASIC won't excite any feature seekers out there.

The high price is partially explained

when you take a closer look at the components. The RAM chips are rated at a speedy 80 nanoseconds, and the Delta power supply is 210 watts strong.

Further explanation of the hefty price tag resides in the quality of construction. This 54-pound heavyweight was originally designed for the Taiwanese military, and it's built to take a licking. All the machines are burned in for 72 hours in a room heated to over 100 degrees Fahrenheit. The chassis itself is an extra-heavy-duty case; there are even mounting screws on the bottom so that you can attach it to your jeep. If you need a rugged system that will withstand extreme conditions in less than desirable locations, the price begins to look less extravagant.

The \$7,885 demo machine that we received housed a 155MB Priam hard disk. Priam models are known for their reliability, further bolstering the company's commitment to producing a ready-to-rough-it machine. The system also included 2MB

The Tatung TCS-8000 is a 54-pound fighter; its heavy-duty case and 72-hour burn-in time in a room heated to over 100 degrees Fahrenheit are meant to prepare it for extreme conditions. Surprisingly, though, the keyboard is not particularly suited to rough environments.

HARD DISK SPEED: THE CACHE ADVANTAGE

You say that you've got a fast 386 chip and a speedy RAM cache, but your hard disk is holding things up by reading and writing at a sluggish pace? If that's the case, you may want to invest in one of the high-speed hard disk caching controllers that are just beginning to show up on the market.

These controllers first came to our attention while we were running disk benchmark tests on some of the 386 machines reviewed here. Especially on the small-record DOS File Access test, we noticed that the Bus machines' scores just blew away the competition, and the VIPC models were also among the top performers. Opening the computers revealed the source of this speedy performance: the Bus machines were equipped with Distributed Processing Technology's DPT Caching Disk Controller, and the VIPC systems used Konan Corp.'s TenTime controller. While there are functional and technical differences between the two devices, the bottom line is that these controllers can make your

computer scream, even if you don't have a 386. And if you do, well, just make sure your heart can stand a trip into hyperspeed.

THE CACHE CONNECTION If your everyday computer tasks involve processing transactions or running compilers, or if in any way they are heavily ori-

The DPT hard disk controller just blew away the competition.

ented toward hard disk access, intelligent caching controllers can be a godsend.

The common thread that ties these controllers together is the presence of on-

board memory chips used for Read/Write caching. Read caching means that the controller keeps in its own memory the last bunch of information it found on a drive; the quantity of information depends on the amount of memory available for the Read cache. Data still in the cache is accessible almost instantly, without taking up normal RAM.

Write caching covers the other part of what controllers do—putting information back on the drive. The information to be refilled is held in the Write cache, allowing the computer's processor and normal RAM memory to go about their next tasks. Depending on software and circuitry, the controller puts the information back when the computer is less busy, when a set amount of time has passed, or when the Write cache gets so full that the only alternative would be to throw the information away.

Having a caching controller is like having two secretaries assisting you while you search for information in a filing cabinet. One secretary holds onto the

of RAM and a 16-bit VGA adapter and Tatung VGA monitor. Somewhat surprisingly, the Tatung keyboard is of the standard variety—it is not specially designed to withstand shock, extreme temperature, or any other hazards of unfriendly environments.

The clock speed is switchable between 20 and 8 MHz, and the bus runs at a true 8-MHz speed for maximum compatibility.

The Tatung unit offers five half-height drives—three accessible and two internal. The eight expansion slots on the Tatung motherboard are divided into six 16-bit and two 8-bit configurations. The motherboard does not incorporate any 32-bit slots but can hold up to 16MB of 32-bit RAM itself.

FAST RAM, LOW SCORES The fast 80-ns. RAM chips allow the system to operate at zero wait states without cache. (Of course, the bad news is that memory upgrades will cost more.) Even with the fast

PC FACT FILE

Tatung TCS-8000

Tatung Company of America Inc.

2830 El Presidio St.

Long Beach, CA 90810

(800) 421-2929

(213) 979-7055

List Price: With 1MB RAM, 1.2MB 5¼-inch floppy disk drive, DOS 3.3, \$3,995; with 40MB hard disk, monochrome monitor, \$5,610; with VGA monitor, \$6,440; with 2MB RAM, 155MB hard disk, \$7,885. 1MB RAM upgrade, \$595.

In Short: The Tatung TCS-8000 is an average 20-MHz machine, with average performance, at an average price of \$3,995. However, this unit stands out if you need a rugged system that may need to withstand a less-than-agreeable environment, such as a ship floor. The stable, 54-pound machine was originally designed by Tatung for the Taiwanese military.

CIRCLE 888 ON READER SERVICE CARD

RAM chips, the lack of any RAM shadowing or other schemes to perk up the system resulted in less-than-impressive benchmark test scores, especially in PC Labs' processor and memory tests.

Tatung informed us that the machine has a newly acquired FCC Class B rating, although there was no sticker to indicate this rating on the system; nor is it likely that most home users would need to purchase such a rugged machine, especially considering the cheaper alternatives on the market. Tatung also told us that it is planning to push the system to the corporate marketplace, although the design of the machine (except for the keyboard) makes it seem as if the wiser move would be to target it for industrial applications.

If you are looking for lowest price or highest performance, keep looking. If you need a solidly built machine that can take an unusually punishing environment, however, the Tatung could be for you.

—Kate Emery

Benchmark Tests: Disk Caching Controllers

On the DOS File Access tests, when compared with IBM's controller, the two disk caching controllers chopped 28 percent and 74 percent off the performance time for small records and cut 46 percent and 52 percent off the time for large records.

Relative Times
(IBM AT with standard IBM controller = 100)

Performance Times

(Times given in seconds except where noted)

	DOS File Access (small record)	DOS File Access (large record)
IBM AT (standard IBM controller)	73.10	18.91
IBM AT (Konan controller)	52.73	10.19
IBM AT (DPT controller)	19.00	9.04

files that have just been looked at in case they are needed again soon, and the other puts files away if they are not asked for within a certain amount of time. This leaves you free to examine and reexamine the information without wasting time relocating it or putting it away. The "intelligent" aspect of these caching controllers is that they combine the two "secretarial" functions using the same memory, and they do it all without your giving them instructions.

DRAMATIC IMPROVEMENTS Our curiosity about the DPT and TenTime controllers led us to request sample units and test them in an 8-MHz IBM PC AT. We ran our normal disk benchmark tests, using first the original IBM AT controller and then the DPT and Konan units.

The differences were dramatic. On the DOS File Access tests, when compared with IBM's controller, the two caches chopped 28 percent and 74 percent off the performance time for small

(continues)

TELEVIDEO SYSTEMS INC. TELOAS III 386/16

TeleVideo Systems, the well-known video terminal manufacturer, has seen some hard times due to the DRAM chip shortage and other factors unrelated to the quality of its products. Key to the company's rebound may be the success of its TeLOAS product line—a full set of 8088-, 80286-, and 80386-based systems. Sold custom-configured through largely OEM channels since their debut in 1987, these systems can be purchased through distributors.

The TeLOAS (TeleVideo Open Architecture System) III 386/16 proves itself a reliable performer while breaking no speed records. The \$3,599 list price for the base system—1MB RAM, 1.2MB floppy disk drive, one parallel and two serial ports—is high but can reportedly be discounted as much as 35 percent by distributors, bringing it down to a more palatable \$2,339.

With the 12-slot version of TeleVideo Systems' TeLOAS III 386/16, you can install four full-length cards after adding a system board, extended memory card, controller, and video. You can leave the left three half-height bays free to squeeze in three more full-length cards.

Our tested configuration, with 4MB RAM, 40MB hard disk, VGA card and monitor, and DOS, runs to \$7,675 before any discount.

A LOOK INSIDE The zero-wait-state TeLOAS follows the familiar practice of mounting a system board, containing the 16-MHz processor, onto a passive back-plane design. Besides the processor (switchable to 8 MHz with software) and a slot for an 80387 coprocessor, the system board holds a neatly packed VLSI chip set from Chips and Technologies, a lithium clock/calendar battery, and the I/O ports.

The first four SIMM banks of 256-kilobit, 100-nanosecond DRAMs (1MB chips may also be used) also go onto the 16-bit system board, and 12 additional memory banks fit into a separate but adjacent board. The two are attached with a proprietary 32-bit connector.

This layout offers the advantage of up-gradability: should you decide to move up

"Hard Disk Speed" (continued)

records, and cut 46 percent and 52 percent off the time for large records.

Our DOS File Access tests contain several parts. The Konan board, with 128K of cache memory, performed best on small and sequential records and was actually slower than the AT controller on a few of the test's large random reading and writing tasks. But the DPT board showed a significant improvement over the AT controller across all aspects of the DOS File Access test, including both large and small records and sequential and random read and write operations.

MORE DIFFERENCES Our test results tell only part of the story. DPT's \$1,150 controller comes standard with 512K of cache memory, expandable to 16MB. The controller's speed is affected by the processor's speed—it runs faster on faster computers. The unit has the advantage of being register-compatible with the Western Digital controller, which means you're ready to go as soon as you take out the standard controller and pop the DPT into your AT-bus 386

and AT-compatibles. The DPT works with ST-506 MFM (Modified Frequency Modulation) drives, but the company makes a whole line of controllers for many other types of drives.

The downside of all this is that DPT's unit uses volatile memory. If you turn the machine off or if the system hangs before the contents of the cache are written back to the drive, you can lose all the information.

Konan's \$695 TenTime controller has only 128K of memory, but the use of a lithium battery (good for 4 years) means that the RAM used is nonvolatile. With nonvolatile memory, if the machine is turned off or hangs before information is written back to the drive, the information is maintained on the cache board until the computer is turned on again—up to 4 years later, theoretically. When eventually the power is restored, the board simply puts the information back where it belongs.

The Konan board is less dependent on processor speed, taking advantage of faster buses to increase the speed of read and write operations. Konan's board

TelOS III 386/16

TeleVideo Systems Inc.
550 E. Brook Rd.
P.O. Box 49048
San Jose, CA 95161-9048
(408) 954-8333

List Prices: With 1MB RAM, 1.2MB 5¼-inch floppy disk drive, \$3,599; with 40MB hard disk, monochrome monitor, DOS 3.3, \$4,674; with VGA color monitor, \$4,875; with 4MB RAM, \$7,675. 1MB RAM upgrade, \$699.

In Short: The TelOS III 386/16 offers easy upgrading through its plethora of slots in a passive backplane design, though it fared no better than average on PC Labs processor and memory benchmark tests. Solid custom-configured largely through OEM channels, this reliable performer is also available at substantial discounts from national distributors.

CIRCLE 628 ON READER SERVICE CARD

Limited) drives. These boards can replace the standard controller, but you need to use the special software provided to reformat and partition the hard disk drives first.

The Konan and DPT prices are not just pocket change. But these controllers offer clear advantages, and they'll more than make up their cost for anyone dealing with transaction-oriented applications or any process where the machine spends a good deal of time retrieving information and then putting it away. An additional advantage: both of these boards are reasonably easy to install, and they come with surprisingly clear and complete documentation.

Like memory and video caches, the new drive controller caches continue the tradition of improving performance beyond processor and memory speed and RAM-capacity increases. Right now, drive cache controllers are not very common and are still rather expensive. But as their benefits become more widely realized, we can expect to see them showing up more often, especially in high-performance machines. —Bruce Brown

to a 486 processor in the future, it's a simple matter (however costly) to switch boards. But there's a hitch: expansion boards inherently suffer more wear and tear to their exposed contacts than do independent motherboards.

The 12-slot version of the TelOS (4- and 8-slot systems are options) allows installation of one half-length and four full-length cards after adding in a system board, extended memory card, disk controller, and 16-bit video adapter. If you leave the left halves of your six half-height drive bays free, you can squeeze in three more full-length cards; these slots are half-length otherwise. A 240-watt power supply made by TeleVideo has connectors for four devices and a user-replaceable fuse that comes in handy in case of overload.

NO SPEED DEMON TeleVideo's 32-bit system/memory board connection apparently proved insufficient when it came to PC Labs' Extended Memory test—the TelOS scored near the bottom of the heap. Ditto for the small-record portion of the DOS File Access test, which taxed the machine's Western Digital ST-506 controller beyond its ability to shine.

Elsewhere, the TelOS performed

**The TelOS
proved no speed
demon—but
no slouch, either.**

nearly dead center: no speed demon, but no slouch. On its side is sturdy construction, good design, helpful documentation, and quick setup and configuration.

TeleVideo intends its TelOS line to address needs as diverse as standalone applications, LANs, and engineering workstations for either DOS or Unix. For its price and power, it faces an uphill climb to rival the competition. But if your priority is less blinding speed than easy upgrading, take a look at the TelOS III 386/16.

Avoid the ins and outs of

Today's manager has to juggle dozens of different tasks. But dealing with the ins and outs of different software packages shouldn't have to be one of them.

Now there's Framework III™, the one program that does everything a manager needs

to do. Framework III is a tightly linked set of the six most often used functions you'll find on a computer: word processing, spreadsheet, database, outlining, graphics and communications.

That means you'll always have easy access to all your information. Because you always use the same, easy-to-learn interface—no matter what the task at hand. Or how many tasks you have to do at the same time.

See what you've been missing.

The result? You can concentrate on managing your business. Instead of managing your software.

For example, you can interrupt word processing to log on to a mainframe; get needed data; jump into a spreadsheet; use the data to create a graph; and insert it into your document. Without ever leaving the program. It's that simple.

It's just as easy to transfer files between Framework and other programs, like Lotus 1-2-3® and WordPerfect®. Or use its telecommunications module to access files from other computers or link up to remote databases.

And you won't have any trouble keeping track of it all, because Framework lets you open as many windows as you'd like to—simultaneously.

The program also integrates a speedy spell-checker and thesaurus in its powerful word processor. As well as macros, linking and over 170 functions in the spreadsheet. And a database that reads and writes dBASE® and other files for

other software packages.

Would you rather carry around six programs or one?

merging into form letters.

What else could a manager possibly want in a software package?

How about an easy-to-use programming language? Framework's FRED® lets you tailor the product to your group's needs. Or you can use one of the many third-party applications.

There's even a version for local-area networks. Framework III LAN simplifies the job of coordinating your workgroup. You can use its built-in electronic mail to circulate memos. Or create complex documents that require input from several people.

What does it all add up to? A product that offers a more efficient way to organize your thoughts, analyze your information and communicate your decisions.

Which is, when you think about it, a more efficient way to manage your business.

Free Video

To get the complete picture of what Framework can do, just call 1-800-437-4329, ext. 3044, and we'll rush you a free videotape that explains it all.

Framework III. It's all the software you'll ever need.

Greatly Increase PC PERFORMANCE for Only \$50

with **HYPERWARE** and **PRINT BOOSTER**

HYPERWARE™ Includes both **HYPERDISK™** and **HYPERKEY™**

HYPERDISK

What It Is

Our benchmark tests show **HYPERDISK** by far to be the fastest disk-caching program available. It will dramatically improve your PC's overall performance, especially on applications that are disk intensive like database sorting or graphics editing.

How To Use It

HYPERDISK can be installed as a DOS device driver or a TSR program. You can specify the size and location of your cache in conventional, extended, or expanded memory. It requires only 7K of conventional memory overhead for a 128KB expanded memory cache and 16K for a 128KB extended memory cache. Using either hotkey or command line control, you can choose to enable or

HYPERKEY

This utility improves the responsiveness of your keyboard by allowing you to vary the key repeat rate and decrease the delay before keys begin repeating to match your abilities with your application software. Don't allow your PC to limit your performance any longer!

After you use **HYPERKEY**, if you ever again use a PC without it, you'll think the PC is broken!

*This chart compares the results of PC Magazine Laboratories "File Access Speed Benchmark Test" BENCH23 - version 3.0 transferring 64 records of 4KB each with **HYPERDISK** (in black) and without it (in red).*

1,429% Improvement

4.06 seconds

with **HYPERWARE**

62.07 seconds

without **HYPERWARE**

Testing was done with a 386/25MHz, ESDI 16 ms access hard drive, 1:1 interleave. If any of these specifications for your machine are of lesser performance, your improvement with **HYPERDISK** will be proportionally greater still.

How It Works

HYPERDISK anticipates what your CPU will be seeking and efficiently reads large chunks of that data from your drive into a designated RAM buffer before the CPU asks for it. **HYPERDISK** allows the PC to transfer much more data from RAM which runs several times faster than disk drive transfers. **HYPERDISK** continues to manage data stored in the cache by automatically writing to the disk when the PC is idle. **HYPERDISK** will also prolong your media and drive lifetimes since it reduces the overall number of individual drive accesses for data storage and retrieval.

disable the installed cache and to flush the cache without rebooting. **HYPERDISK** has other popular features such as: installable without reboot, caches floppy disks, selection of drive to be cached, saves writes in cache, queues writes to cache and selectable full-track read option.

HYPERWARE

2805 19th St. SE
Salem, OR 97302

**TUSSEY COMPUTER PRODUCTS
LTD.
SWAN 386/16
SWAN 386/20D**

There's no mistaking the marketing strategy behind Tussey Computer Products' Swan 386/16 and Swan 386/20D. The 16- and 20-MHz systems, base priced at \$1,999 and \$2,199, are geared to attract the attention of anyone who wants 386 performance on a budget. In both cases, the base price includes 1MB RAM, one floppy disk drive, and a keyboard.

From the outside, the two machines look identical. The standard AT-clone cases house a 1.2MB, 5¼-inch floppy disk drive and offer access to three half-height disk drive bays. From the back, you can see the two serial ports and the single parallel and game ports that come with each unit. The \$3,533 and \$4,818 test configurations came with Hi-Tek Enhanced-style 101-key keyboards and Magnavox VGA monitors.

UNDER THE HOOD Pull off the covers, and the similarities between the two machines continue. Both offer the same

Tussey Computer Products' Swan 386/20D (like the company's 386/16) is packaged in a standard AT-clone case. The Twinhead motherboard doesn't accept RAM but supports a 32-bit memory card (with a limited capacity of 8MB) in one of its eight slots.

beefy, 200-watt power supply, and both use an 8-bit VGA adapter from a little-known company called Cirrus. The units rely on the Phoenix ROM BIOS, which includes a handy setup program.

Even the manuals are almost identical; they are also of a much higher quality than you might expect with bargain-priced systems. Although they do not have anything so extravagant as an index, information is

Get on with your business

ALLOY's 386/MultiWare™
The DOS Multiuser Solution for Your Business

On the shelf in the morning... on the job in the afternoon.

ALLOY's 386/MultiWare is a true MS-DOS™ multiuser, multitasking solution that installs itself and runs the most popular DOS software. So, if you're the dealer who sells it — or the buyer who uses it — 386/MultiWare lets you get on with your business.

Basic components include ALLOY's multiuser, multitasking operating system, NX386™ 2-user plug-in card and/or 8-user plug-in card with a connector box. Each user can run 8 tasks simultaneously. Current configurations support from 3 to 21 users.

ELECTRIFY YOUR PERFORMANCE WITH CORDATA.

Give your computing a powerful boost with Cordata's family of high quality computers. Their unique combination of power, performance and features for a great price gives you good value for your investment.

386 POWER AND PERFORMANCE PLUS MORE!

Our CS 5000 series of desktop computers provide the superior performance that meets your demands for more power. And now it's available in a new advanced 25 MHz model. OS/2[®] compatible, the CS 5000 is perfect as a CAD/CAM workstation with its Weitek[®] co-processor support and high resolution VGA, and as a Novell[®]-certified file server for LAN applications.

Cordata's CS 5000 supports 10-NET[®], UNIX[®] and SCO[®] XENIX[®] multi-user operating systems, and is a powerful standalone workstation providing memory expansion from 1 MB to 16 MB. Compatible with a wide range of storage devices and peripherals, it offers flexibility for future expansion.

MORE CORDATA POWER.

Our OS/2 compatible CS 4600 is a fast 12 MHz 286 system incorporating Phoenix[®] BIOS and NEAT CHIPSet[™] technology for improved AT[®] performance. With hardware support for EMS 4.0, memory expansion to 4MB, eight expansion slots and compatibility with a range of storage devices, the CS 4600 system can be configured to your exact needs.

Cordata's XT[®] compatible CS 45 offers turbo performance as a sophisticated, single user PC and as a Novell[®]-certified LAN workstation. Seldom has a PC offered so much for so little.

Our unique WPC Color Bridge[™] runs both Apple II[®] and IBM[®] MS-DOS[®] programs. With 10 MHz turbo XT performance, it makes an ideal independent workstation for the office or classroom, or as part of a network.

FULL WARRANTY AND NATIONWIDE SERVICE.

Cordata computers come with a full year warranty and are supported by a nationwide service network.

As a subsidiary of Korea's Daewoo Electronics Co., Ltd., a multi-billion dollar manufacturer of innovative business and consumer electronics, Cordata offers you an international commitment to quality and value.

CIRCLE 687 ON READER SERVICE CARD

In Short: Less-than-stellar performance offsets the low, low prices offered by the Tussey Computer Products' 386 machines. If you can accept slower performance and some less-than-well-known components, you will find an opportunity to save some dollars with these machines.

presented in a clear and accessible manner—almost a rarity these days.

The only major differences between the two models are in the CPUs (of course) and the hard disk drives. The 20-MHz test machine had a 150MB CDC hard disk attached to an Adaptec hard/floppy disk controller. The 16-MHz version came with a 40MB Seagate driven by a combination hard/floppy disk controller from the not widely known National Computer.

MEMORY LIMITS Each system uses the same Twinhead motherboard, which sports eight slots: one proprietary 32-bit, three 8-bit, and four 16-bit. Since the motherboard doesn't accept any RAM, the single 32-bit slot comes complete with a memory card. Both the 16- and 20-MHz review machines had 2MB worth of 256-kilobit chips installed on the card.

Unfortunately, the card only has a 32-bit memory capacity of 8MB. With the

growing pressure to expand operating system and application memory requirements, the 8MB limit may become constraining in the coming years.

Of course, chances are that the machines' audience of budget-minded buyers won't even make use of the maximum 8MB, at least not in the immediate future. But long-term considerations require that you keep this limitation in mind when shopping around, especially in light of the predicted drop in memory prices. You don't want to bump up against the 8MB limit and be forced to replace the entire system before its 3- to 5-year life span is complete.

There is one more unfortunate feature shared by these two computers: neither fared particularly well in our benchmark tests. Without design refinements like a hardware memory cache, the systems' overall processing performance suffered when compared to other computers in their respective classes.

To give these machines their due, adequate construction and a fair complement of mainstream components give them credibility, and their rock-bottom price tags certainly command attention. If you are willing to sacrifice some speed and risk living with the memory limitations, they represent bargain values in the 386 arena.

—Alfred Poser

UNIQ TECH INC. UTI 386/20

There's nothing terribly unique about the UTI 386/20, but this is no criticism. It's just an acknowledgment of Uniq Tech's use of solid, brand-name components in its 20-MHz machine—a factor that should appeal to buyers looking for a ride on the safe side. The machine does, however, have some limitations that could make it the wrong choice for anyone with above-average expectations.

The desktop-size system we received included a host of well-known parts, including a Paradise 16-bit VGA card and NEC MultiSync II monitor, a generous 250-watt power supply from PC Power and Cooling, floppy disk drives from TEAC (1.44MB) and Mitsumi (1.2 MB),

Uniq Tech's UTI 386/20 uses the standard complement of solid, brand-name components to enhance reliability. The total of seven expansion slots can be a real limitation, though, as can the 8MB memory capacity of the system.

a Seagate 80MB hard disk, a Chips and Technologies chip set, and the Orchid Privilege-386 card, at a cost of \$3,975. The price of the base system, which includes a monochrome monitor and Hercules graphics card, 1MB of RAM, and a 220-watt power supply, logs in at a low \$1,699.

The system also includes Mitsumi's 101-key keyboard. It's got a soft feel—no clickiness, but good response just the same. The front panel contains most of the increasingly standard features, including power-on, turbo mode, and hard disk access LEDs, as well as a reset button and key lock.

TO THE HEART The heart of the machine is the 32-bit Privilege-386 card, which houses the Intel 80386 CPU and the AMI BIOS. The 386 chip is lodged awkwardly beneath a daughtercard that contains the four-pin turbo light connector, but ordinarily this wouldn't be a problem. You may have trouble, however, if you have to slide the full-length card, encumbered by its protuberant appendage, between the white plastic edge guides located at the front panel end of each slot.

While the Orchid card has the space to accommodate an 80387 or Weitek 1167

FACT FILE

UTI 386/20

Uniq Tech Inc.
3640 Westchase Dr.
Houston, TX 77042
(713) 780-7170
(800) 237-4961

List Price: With 1MB RAM, 1.2MB 5¼-inch floppy disk drive, \$1,699; with 60MB hard disk, monochrome monitor, DOS 3.3, \$2,187; with VGA color monitor, \$2,866; with 80MB hard disk, 1.2MB 5¼-inch and 1.44MB 3½-inch floppy disk drives, \$3,205. 1MB RAM upgrade, \$400; 60MB tape back-up, \$549.

In Short: The UTI 386/20 is a solid, if not innovative, system built on brand-name components. While it may appeal to users with average needs, an 8MB 32-bit memory limitation, less than lightning speed, and skimpy slot space make it a poor choice for those with more extensive requirements.

CIRCLE 666 ON READER SERVICE CARD

coprocessor, it doesn't support any memory chips. The 2MB of 80-nanosecond DRAM that came with our unit were clustered in eight 256-kilobit SIMM packs located unusually close to the power supply on the backplane board. You can upgrade the memory to 8MB by substituting 1-megabit chips, but even that substantial amount of 32-bit memory seems small when compared to the 16MB (or higher) memory capacity of some other systems.

The system is also short on port options and slot space. Even in the test configuration, no serial or parallel port was included, and only seven slots were available—one 32-bit, four 16-bit, and two 8-bit. A serial/parallel device connector located behind the memory chips could help you save slot space, but according to the company, it's presently a useless option as the cost of activating it exceeds the purchase price of an I/O card.

You can run the machine at full speed or use Orchid's utility software to throttle down to 5, 6.7, or 8 MHz. The bus can be shifted among 10-, 6.7-, 5-, or 8-MHz speeds; that's a pretty reasonable compromise between the slow-going, octogenarian boards of yesterday and the quicker youngsters of today.

Speed is helped by relocating video and

BIOS ROM into 384K of shadow RAM and running the machine at zero wait states. Our benchmark tests, however, showed the system's CPU speed to be at the lower end of 20-MHz performance; partial compensation for this is made by the quick, 28-millisecond hard disk.

If you don't have big expansion plans and can live without blinding speed and masses of memory, this system's relatively low price and standard components from reputable companies could make it worth your while.—Jennifer Zaino

VIPC COMPUTERS CORP.

VIPC 386/16
VIPC 386/20
VIPC 386/25

VIPC, a Hayward, California, mail-order firm, gives you a real choice when it comes to purchasing a 386 PC: you can have the company build a machine just for you, incorporating your specifications onto a motherboard it selects for optimum performance, or you can choose one of its preconfigured 386 systems—either the basic unit or a fully loaded model. VIPC's 386/16 is base priced at \$1,499; base prices for the 20- and 25-MHz versions are \$1,999 and \$2,999, respectively.

Those basic prices include 1MB of RAM, a 1.2MB 5¼-inch floppy disk drive, a 230-watt power supply, and a parallel port. The 20-MHz version comes with an EGA adapter built into the motherboard, but no monitor.

Phoenix BIOS chips are found on the Micronics motherboards in the 16- and 25-MHz units. The 20-MHz model sports an AMR motherboard and the Quadlet BIOS.

Software-controllable shadow RAM to improve video and system performance is available on all units. Zero-wait-state memory is standard on the 16- and 20-MHz machines, while the three-wait-state 386/25 uses the Intel 82385 cache controller, with 64K of 35-nanosecond cache memory, to achieve greater speed.

For the base prices, a desktop configuration is standard. Our preconfigured test units, however, came in an optional \$300 tower-style case.

You can choose either a Maxi-Switch, Key Tronic, or Nan Tan 101-key keyboard. I prefer the clickier Nan Tan model, though others might like the relatively soft feel of the Key Tronic or the middle-of-the-road Maxi-Switch.

The test units also had three performance-enhancing options: heavy-duty power supplies, fast VGA video cards, and a fancy hard disk controller. The power supplies are rated at 375/450 watts, more than needed for the units as configured, and sufficient to handle all of the RAM and add-ons you can squeeze into the case.

The three machines used Video Seven V-RAM VGA cards; the cards included a chip that lets the computer continue processing as data is transferred to the screen. We had to disable the standard EGA port on the 20-MHz version to use the card; it seemed wasteful, but the resulting video performance made it worthwhile.

The Konan TenTime Intelligent Caching hard disk controller has a 128K cache that can speed up disk access incredibly. For anyone who runs applications that are heavily disk read/write intensive, this \$695 option is a godsend. If your average record size is less than 64K, the Konan controller

The VIPC 386/25, the leader of a family of three 386-based PCs, is basically an adequate performer, although it is distinguished mostly by the Konan TenTime hard disk drive controller. A 128K cache, a fast VGA card, and a heavy duty power supply are more salient features.

QNX vs. OS/2 UNIX

QNX®: Bend it, shape it, any way you want it.

ARCHITECTURE If the micro world were not so varied, QNX would not be so successful. After all, it is the operating system which enhances or limits the potential capabilities of applications. QNX owes its success (over 75,000 systems sold since 1982) to the tremendous power and flexibility provided by its modular architecture.

Based on message-passing, QNX is radically more innovative than UNIX or OS/2. Written by a small team of dedicated designers, it provides a fully integrated multi-user, multi-tasking, networked operating system in a lean 148K. By comparison, both OS/2 and UNIX, written by many hands, are huge and cumbersome. Both are examples of a monolithic operating system design fashionable over 20 years ago.

MULTI-USER OS/2 is multi-tasking but NOT multi-user. For OS/2, this inherent deficiency is a serious handicap for ter-

minal and remote access. QNX is both multi-tasking AND multi-user, allowing up to 32 terminals and modems to connect to any computer.

INTEGRATED NETWORKING Neither UNIX nor OS/2 can provide integrated networking. With truly distributed processing and resource sharing, QNX makes all resources (processors, disks, printers and modems anywhere on the network) available to any user. Systems may be single computers, or, by simply adding micros without changes to user software, they can grow to large transparent multi-processor environments. QNX is the mainframe you build micro by micro.

PC's, AT's and PS/2's OS/2 and UNIX severely restrict hardware that can be used: you must replace all your PC's with AT's. In contrast, QNX runs superbly on PC's and literally soars on AT's and PS/2's. You can

run your unmodified QNX applications on any mix of machines, either standalone or in a QNX local area network, in real mode on PC's or in protected mode on AT's. Only QNX lets you run multi-user/multi-tasking with networking on all classes of machines.

REAL TIME QNX real-time performance leaves both OS/2 and UNIX wallowing at the gate. In fact, QNX is in use at thousands of real-time sites, right now.

DOS SUPPORT QNX allows you to run one PC-DOS application at each computer on a QNX network. With OS/2, 128K of the DOS memory is consumed to enable this facility. Within QNX protected mode, a full 640K can be used for PC-DOS.

ANY WAY YOU WANT IT QNX has the power and flexibility you need. Call for details and a demo disk.

THE ONLY MULTI-USER, MULTI-TASKING, NETWORKING, REAL-TIME OPERATING SYSTEM FOR THE IBM PC, AT, PS/2, THE HP VECTRA, AND COMPATIBLES.

Multi-User	10 (32) serial terminals per PC (AT).
Multi-Tasking	64 (150) tasks per PC (AT).
Networking	2.5 Megabit token passing. 255 PC's and/or AT's per network. 10,000 tasks per network. Thousands of users per network.
Real Time	4,250 task switches/sec (AT).
Message Passing	Fast inter-task communication between tasks on any machine.

C Compiler	Standard Kernighan and Ritchie.
Flexibility	Single PC, networked PC's, single PC with terminals, networked PC's with terminals. No central servers. Full sharing of disks, devices and CPU's.
PC-DOS	PC-DOS runs as a QNX task.
Cost	From US \$450. Runtime pricing available.

QNX

And raise you a million.

A

This caption is 8 point type at 1664 x 1200 resolution.

If you're looking at large displays, you should take a close look at the L-View 19" display system from Sigma Designs.

With 1664 x 1200 resolution, L-View puts two million pixels on the screen. For crisp, clear images, no other display system beats it.

As a result, you can work all day without eye-strain. Even when you're working with 8 point type.

You also get VGA, MDA and Hercules emulation with PC and PS/2 compatibility.

Just call 1-415-770-0100 for the name of your nearest dealer. And we'll show you how we've raised the standard for high-resolution display systems. In at least a million ways.

lets you save time by giving control back to the processor while it writes information to the hard disk on its own. In case you turn off the computer during this process, the lithium battery on the controller enables the cache to remember what was being written for the next time you power up.

VIPC 386/16 The 16-MHz VIPC test unit has a list price of \$5,999. Besides most of the base system components and the options listed above, this unit included a Seagate ST-4053 44MB 28-millisecond hard disk, a 1.44MB 3½-inch second floppy

disk drive, and a NEC MultiSync II monitor.

The Micronics 16-MHz motherboard featured zero-wait-state static-column RAM and a 32-bit memory expansion slot. Software lets you lower the processor speed to 4.77, 6, or 8 MHz, but the expansion bus speed stays at a safe 8 MHz.

The test machine, which came with 4MB of 80-ns. memory on the 32-bit card, was one of the fastest performers in its class.

VIPC 386/20 Besides the basics, our test 20-MHz unit came with a Seagate 80MB 28-ms. hard disk and a Sony Trinitron multiscan display. The extra goodies brought the price up to \$6,999.

The 20-MHz system boasts an AMR motherboard with several built-in ports—two serial and two parallel—a floppy disk controller, and the aforementioned EGA controller. The motherboard held the maximum 2MB of 80-ns. DRAM memory, but a proprietary AMR 32-bit slot can handle an expansion card with 16MB more.

CPU speed is selectable between 20 MHz and 8 MHz. The machine runs at zero wait states, but if you need to slow things down a bit, the setup program lets you switch easily to one wait state. No memory caching is available, but the four-way page-mode interleaving helps in performance.

Even so, the 20-MHz version was one of the lower scorers on the processor and memory benchmark tests. Where it did well was on the drive and video tests.

VIPC 386/25 The 25-MHz machine we received came with a Maxtor 160MB 23-ms. hard disk, 80387 25-MHz coprocessor, Sony Trinitron monitor, 3½-inch 1.44MB second floppy disk drive, TEAC 60MB streaming-tape backup device, and 8MB of 100-ns. DRAM. List priced at a towering \$12,499. (VIPC adjusts the price of its machines according to the current market prices for RAM chips, good news if the predicted drop in memory chip prices occurs.)

The motherboard includes one 32-bit memory expansion slot that can take up to 16MB of RAM. The bus speed is switchable between 8.33 and 12.5 MHz. The

slower 8.33 speed might be the best bet now, when most expansion cards need 10 MHz or less, but you'll be glad of the 12.5-MHz option when faster boards become available. While the machine operates at either three or four wait states and uses only 100-ns. chips, the 82385 cache controller helps to make up the difference.

In general, the PC Labs benchmark tests showed the system to be an adequate performer. It received its highest marks in the BIOS Disk Seek tests, but it was considerably slower in the DOS Disk Access category. Its marks on the memory speed tests were a bit low, too.

The only drawback with the VIPC machines was a tendency for expansion cards to come loose during shipping. The tower case must be a little too roomy for the full-length cards. Once everything was seated properly, the machines ran just fine.

VIPC offers a 1-year warranty on parts and labor; if service is required, the company generously pays shipping both ways. The downside is that VIPC does not include an on-site service contract during the first year.

Even in their dressed-to-kill test configurations, these machines' prices compare favorably with other vendors' systems. When you factor in the quality components, you realize that VIPC can become an aggressive presence in the 386 market.

CIRCLE 985 ON READER SERVICE CARD

In Short: VIPC makes a noticeable splash with these three 386 computers. Each machine is a considered blend of components, chosen to achieve the greatest performance possible.

VNS AMERICA CORP. SIVA AT386

Here's a price leader that demands consideration. For a base price of \$1,845, VNS America's 20-MHz SIVA AT386 comes standard with 1MB of 100-nanosecond RAM, a 1.2MB 5¼-inch floppy disk drive with a combination hard/floppy disk controller, one parallel and two serial ports, a monochrome monitor, and a Fujitsu keyboard with good tactile response. But that's not all: the price includes a 40MB hard disk and a 200-watt power supply packaged inside an attractive tower-style case. The real kicker is that if you buy \$3,200 of Unix software from VNS America, the company will give you this base system for free.

Enter This Into Your Spreadsheet.

In 30 Seconds.

Introducing TrueScan™. The easy, accurate way to get numbers off the page and into your spreadsheet. Fast.

Finally, getting numbers into 1-2-3® is as easy as 1-2-3. One, put the page in the scanner. Two, select "Start Scanning." And, three, crunch those numbers.

With TrueScan and any popular scanner—HP ScanJet™, Canon, Dest and others—you can get figures from the printed page into your spreadsheet, in the correct format, ready to use. With no more tedious retyping or formatting.

TrueScan gives a scanner the intelligence to recognize everything you need from a page—dot-matrix, typewritten, typeset, laser-printed or computer printout—and put it in a format you can use, immediately.

From the simplest list of numbers to the most complex, multi-column financial report, TrueScan makes getting data into your

spreadsheet unbelievably easy. And fast. And accurate. And reliable.

TrueScan puts documents into your word processor or desktop publisher, too. Just as fast. Just as reliably.

The most accurate recognition at any price. At an unbelievable desktop price.

Call 800-544-7051 for the name of the TrueScan dealer nearest you, and get Desktop Recognition™ you can count on.

CIRCLE 144 ON READER SERVICE CARD

■ 80386 DESKTOP PCs

Even after enhancing the test configuration with 4MB of RAM, a 16-bit Paradise VGA card, a Packard Bell VGA monitor, a second floppy disk drive, a math coprocessor, and an 80MB hard drive, the price rose only to \$5,134.

The SIVA motherboard has an Intel 80386 20-MHz processor that you can set back to 16 MHz or even 8 MHz for fussy software. The programmable expansion bus controller is independent of the system-memory access timing, so you can set the bus to run at a conservative 8-MHz or increase its speed to 10-MHz if your cards can handle it.

The motherboard uses a Chips and Technologies VLSI 386 chip set and comes with the AMI 386 BIOS. These standard and highly compatible brands speak well for the system's design and underscore the value you get at a very low price.

You can put up to 8MB of RAM on the motherboard before you need to add a memory expansion card to reach the system maximum of 16MB of 32-bit memory. (VNS currently charges \$430 for each megabyte of 100-ns. static-column

VNS America's low-priced, 20-MHz SIVA AT386 makes an excellent file server. The tower case sits on a wide-based stand for stability and can fit six half-height storage devices with exposed fronts. The 8-MHz bus speed option forces finicky network cards to behave.

FACT FILE

SIVA AT386

VNS America Corp.
910 Boston Post Rd., #270
Marlboro, MA 01752
(800) 252-4212
(508) 481-7192

List Price: With 1MB RAM, 1.2MB 5¼-inch floppy disk drive, \$1,845; with 40MB hard disk, monochrome monitor, DOS 3.3, \$2,195; with VGA monitor, \$2,690; with 4MB RAM, 80MB hard disk, 1.2MB 5¼-inch and 1.44MB 3½-inch floppy disk drive, 80387-20 coprocessor, \$4,895.

In Short: This is a clone 20-MHz system with very good parts and an excellent price. For \$2,460 you'll get a 40MB drive and a monochrome monitor. The pricing is exceedingly attractive, the only fly in the soup being a lack of PCC approval at the time of testing.

CIRCLE 660 ON READER SERVICE CARD

DRAM chips.) The SIVA AT386 uses memory interleaving and shadows both video and ROM BIOS. There is no cache memory, which can account for the predominantly average scores it received on our benchmark tests.

In addition to the single 32-bit memory expansion slot, there are two 8-bit slots and five 16-bit expansion slots. In a space pinch, the 32-bit slot can take 16-bit cards.

ROOM TO GROW The tower case sits on a wide-based stand for stability and can hold six half-height storage devices, all with exposed fronts. The power supply has only four device connectors, so you'll need a pair of splitters if you fill the box up with drives.

The storage potential of this system makes it a good choice for anyone with high-powered computing needs, and an especially good file-server candidate. The 8-MHz bus speed option means you won't have to worry about its rejecting picky network cards.

These computers are sold via mail order, and all service is performed at the company's Massachusetts facility. The standard 1-year warranty includes one-way shipping for minor service work, but VNS America will pay both ways if a problem results from a major system defect.

It's when you run across a 386 system like this one, packed with good features and components for a very low price, that you have to wonder why anyone would even consider buying a 286 machine.

—Bruce Brown

WANG LABORATORIES INC.

WANG 381
WANG 382

Wang Laboratories is well known for helping to make word processing an essential part of the modern office, and its minicomputers are in use worldwide. But until now, Wang hasn't been broadly successful in the MS-DOS microcomputer market. Part of the reason is that although the first Wang PCs were MS-DOS compatible, you had to go through arcane machinations to reach that state. Even Wang's first 80386 machine, a truly MS-DOS-compatible unit designed and built largely by Intel, didn't give Wang the boost it needed to achieve broad-based success in the microcomputer arena.

The introduction of the Wang 381 and 382 386 systems, base priced at \$2,900 and \$3,155, respectively, may change all that. Designed from the ground up by Wang, these machines beautifully tread that fine line between mainstream me-too banality and over-the-edge eccentric uniqueness.

The only significant difference between the 381 and the 382 is their CPU clock speeds: the 381 is a 16-MHz machine, while the 382 runs at 20 MHz. Otherwise, inside and out, they are almost identical.

The power switches sit in an accessible position on each model's handsome front panels. Three half-height drive bays on the right of each machine can be reached through openings in the front panel. Inside, you will find another full-height drive bay that exhibits one of the few flaws in the machine's physical design: it has only rail slots at the bottom, hence it cannot be used for two half-height devices. This is just a small drawback, however.

QUALITY CONSTRUCTION Every other aspect of these machines displays an

MUTOH

Speeding Beauty.

Speed, beauty, and intelligence—you can have it all with a Mutoh pencil-compatible plotter.

Pencil plotting is astonishingly fast. The Mutoh F-910A records a top speed of 1,131 mm/sec, with acceleration to match at 5.7G. It's already across the finish line when ordinary pen plotters are just warming up.

Pencil plotting is beautiful. It produces clear, sharp lines that make perfect copies, even with low-cost systems. When beauty is more than what meets the eye, you'll also find that pencil can be cleanly erased and redrawn in last-second upsets.

Pencil plotting is intelligent. It's far more economical than pen in both cost and time. The F-910A's 40-lead cartridge is quick to change, yet enables long-distance plotting without babysitting, so you can keep your eyes off the plotter and your mind on something more important.

Speed, beauty, and intelligence—the winning combination from Mutoh.

We're Giving You a Whole New Line.

The F-910A plotter

takes either pen or pencil./Resolution of 0.0004".
Speed of up to 44 Sips./Accelerates up to 5.7G

EQUITY COMPUTERS

POWER

How Much Do You Need?

*The Equity 386/20 is
Epson's most powerful
computer. But is it
the right Equity
computer for you?*

It depends. Do you have a massive database to manipulate?
Or lengthy reports to write? Do you want bolder, gutsier
graphics? Or more sharply displayed spreadsheets?

The point is, more power may not be the only
answer. What you really need is a personal computer
with your ideal combination of features.

Enter the efficient, affordable Epson® Equity™ line.

Each machine provides a different degree of speed, power,
memory and flexibility. And though the features vary from one Equity
computer to the next, they all share one important thing in common.
Epson's renowned reputation for quality,
reliability and value.

So which Epson Equity computer is
most appropriate for the work you do?

For straightforward word processing, spreadsheets and business graphics, the 8088-powered Equity I+ is an uncommonly good value. It's Epson's most popular computer with first-time buyers, schools and small businesses.

Need more speed and color? Consider the intriguing Equity Ie. It's 25% faster than an IBM® Model 30 and features four available expansion slots—one more than IBM. Built-in MCGA video provides impressive color and clarity. In short, the Equity Ie is ideally suited for office work or for work you bring home from the office.

At 12MHz, our agile Equity II+ is the personal computer cornerstone many businesses are building on. The Intel® 80286 processor moves work along at a rapid clip, handling everything from database management to desktop publishing with equal grace and efficiency.

The Equity III+ delivers the same quick-paced 80286 performance plus nine expansion slots and room for five

mass storage devices. It's the Equity 80286-based computer with the greatest growth potential.

For CAD/CAM users, database devotees and other serious power users, there's the forceful yet affordable Epson Equity 386/20. This top-of-the-line 20MHz machine handles intense number crunching applications with great speed and sophistication.

To see which Epson Equity computer fits your power requirements, visit your Epson Authorized Dealer. Or for a detailed brochure on any Epson Equity computer, phone (800) 922-8911.

What you'll discover, quite quickly, is what you've been needing all along. An Epson.

EPSON

**WHEN YOU'VE GOT AN EPSON,
YOU'VE GOT A LOT OF COMPANY.™**

enviable high-quality design and construction. The cases are made of a substantial grade of steel, helping the units to outweigh their lightweight competition. A steel rod serves as a cross brace, joining the front and rear panels right at the middle of the chassis. The drive bays are made of heavy-gauge metal, adding strength to shielding.

So that you won't have to slide the cover on and off, as you must with a typical cheap case, the Wang's covers have three "fingers" on each edge that slip into slots in the chassis. This arrangement lets you lift the top off easily after you slide it for a few inches; it also makes the top stay on securely when put back into place. The screws that hold the case together are "captive" on the back panel; you cannot drop them or lose them as you might on most other machines.

As for the electronics, Wang designed its own motherboard, but built it with standard components. The company uses the Chips and Technologies chip set and the Phoenix ROM BIOS. The motherboard includes one parallel, one serial, and one mouse port.

The motherboard doesn't accept any memory; instead, a 32-bit card can boost

The 20-MHz Wang 382 displays quality construction at every turn, including an extra-sturdy steel case, drive bays of heavy-gauge metal, easy-to-remove tops, a proprietary motherboard that features standard components, and a remarkably responsive keyboard.

Wang 381

List Price: With 1MB RAM, 1.2MB 5¼-inch floppy disk drive, \$2,900; with 68MB hard disk, VGA monochrome monitor, DOS 3.3, \$6,210; with VGA monitor, \$6,640; with 2MB RAM, 42MB hard disk, 1.2MB 5¼-inch and 1.44MB 3½-inch floppy disk drives, \$6,595, 1MB RAM upgrade, \$675; 60MB tape backup, \$1,800.

CIRCLE #61 ON READER SERVICE CARD

Wang 382

List Price: With 1MB RAM, 1.2MB 5¼-inch floppy disk drive, \$3,155; with 68MB hard disk, VGA monochrome monitor, DOS 3.3, \$6,445; with VGA monitor \$6,875; with 2MB RAM, 42MB hard disk, 1.2MB 5¼-inch and 1.44MB 3½-inch floppy disk drives, \$6,795, 1MB RAM upgrade, \$675; 60MB tape backup, \$1,800.

CIRCLE #62 ON READER SERVICE CARD

In Short: The Wang 381 and 382 are good-looking, well designed, and solidly built. They use high-quality components and do an excellent job of presenting an original design that is compatible with the mainstream market.

maximum memory to 16MB, using 1-megabit SIMMs.

Every detail appears to be engineered beyond minimum requirements, which should make the machines more reliable and solid. For example, the 381 runs at 16 MHz but uses Chips and Technologies components rated for 20-MHz operation. The 382 runs at 20 MHz but uses chips rated at 25 MHz.

OUTSTANDING FEATURE The tested configurations (\$6,595 for the 16-MHz unit, \$7,895 for the 20-MHz model) each came with a Wang monitor, a VGA adapter using Tseng Labs VLSI chips, a hard disk (42MB in the 381, 68MB in the 382), and a keyboard.

The latter is perhaps the systems' strongest feature. Built by Honeywell for Wang, the keyboard follows the standard 101-key layout. Simply put, it has one of the nicest touches of any keyboard I have

ever used, including IBM's PS/2 keyboard. It also has an internal key click that you can make louder or softer by using a keystroke combination.

Both computers turned in respectable, but not stellar, performance times on our benchmark tests, in part because neither offers hardware memory caching. Interleaved memory, however, does help boost performance a bit.

While the prices of the fully configured Wang 381 and Wang 382 won't win prizes as low-cost bargains, they are not unreasonable when compared with other top brands such as IBM, Compaq, Tandy, or AT&T. If you are looking for a solid machine that is built well and backed by a major manufacturer, either of these Wang models deserves consideration.

—Alfred Poor

WYSE TECHNOLOGY WYSE pc386

Like other PCs from Wyse Technology, the 16-MHz Wyse pc386 uses modular system architecture; the idea is to "plug-and-play" your desired configuration as processor upgrades become available. Although the modular approach never really caught on, Wyse's pc386 offers first-rate features and performance. For \$3,599, you get a base configuration including 1MB RAM, 1.2MB 5¼-inch drive, and DOS 3.3.

On the outside, the pc386 can pass for an average PC clone. At power-up, the 16-character LCD window on the front panel displays the time and processor speed. The two buttons below the window allow you to switch between the default display, the percent of CPU usage, and system diagnostics. A third button on the front panel toggles the processor between 16 and 8 MHz.

When you look inside, you'll first notice the perfectly usual four drive bays accessible from the front and the fifth, half-height bay located under the two right-most drives. What will get your attention is the absence of a base-plane motherboard, although there are plenty of expansion slots: 11 in all (hence the modular architecture).

■ 80386 DESKTOP PCs

At the heart of the modular design are two full-length boards containing the 80386 processor, a coprocessor socket, the Phoenix BIOS, and the discrete motherboard components. In our test system, which was equipped with 4MB of RAM, all system memory was on proprietary memory boards that flanked the system boards on either side. (The base price includes only one memory board with 1MB of RAM and room for another 1MB of 256K chips.) To assure 32-bit memory access, the tops of these boards have a 32-bit edge connector; a top-planar bridge connects the memory boards.

Up to three memory boards containing 2MB each can be installed in the machine. An additional 10MB of memory can be added using commercial memory boards, although the additional RAM will be accessed at the 8-MHz bus speed.

ZERO-WAIT-STATE PROCESSING

Wyse's use of page-mode memory assures zero-wait-state processing in systems with 1MB of RAM or less. If the memory exceeds 1MB, a two-way interleaving scheme takes over to achieve zero wait states. In the memory benchmark tests, the pc386 scored in the top half of the 16-MHz machines.

The 16-MHz Wyse pc386's modular architecture consists of two 32-bit boards holding the CPU, a coprocessor socket, the BIOS, and discrete motherboard components. The maximum 6MB of 32-bit RAM is achieved via three 16-bit memory boards with 32-bit edge connectors.

FACT FILE

Wyse pc386

Wyse Technology
3571 N. 1st St.
San Jose, CA 95134
(800) 438-9973
(408) 433-1000

List Price: With 1MB RAM, 1.2MB floppy disk drive, DOS 3.3, \$3,599; with 85MB hard disk, monochrome monitor, \$7,563; with VGA monitor, \$8,267; with 4MB RAM, 85MB hard disk, 60MB tape backup, \$11,849. 1MB RAM upgrade, \$649.

In Short: The Wyse pc386 rates up with the other top performers among 16-MHz machines. But while Wyse continues to use its modular design, being able to plug in a faster processor card hasn't caught on as a low-cost upgrade path. Equipped with a fast Hitachi hard disk and an easy-to-use tape backup system, this unit comes fully configured out of the box; the only strike against the pc386 is its stiff price tag.

CIRCLE 288 ON READER SERVICE CARD

At first, 11 expansion slots seem like a lot, but they do fill up quickly. In the test unit, the two 32-bit slots contained the system boards, and EGA and I/O cards took up two of the three 8-bit slots. Four of the six 16-bit slots were filled by the two 2MB memory boards, a Wangtek tape drive controller, and a Western Digital ESDI drive controller.

The unit we received also included a Wyse EGA monitor, an 85MB Hitachi hard disk, and the SY-TOS operating system for the Wangtek tape backup unit. Other extras are DOS 3.3, a LIM 3.2 emulator, and a Wyse disk-caching program. All told, the unit came to \$11,849.

The pc386 is full of the features you'd expect in a 386 PC, and it even outperforms some of the more expensive machines in its class. Wyse is standing behind its modular architecture and plans to ship a 25-MHz model by the time you read this. On the downside, Wyse has recently cut its workforce by 15 percent to cope with the crumbling market share of its 286 PC line. The only thing to watch out for is whether Wyse Technology can hold its own against the current onslaught of manufacturers with lower-priced, feature-filled 386s. —Greg Atwang

ZENITH DATA SYSTEMS

ZENITH Z-386/25

Zenith's engineers pulled out all the stops to wring performance from its flagship model, the Zenith Z-386/25. This is a zero-wait-state, 25-MHz machine with 64K of 25-nanosecond cache memory and Zenith's oddly named Slushware, which automatically shadows video and ROM BIOS into faster system RAM. The \$6,599 base system also plays host to Zenith's unique Superset intelligent bus architecture, which detects the speed of each interface card at bootup and runs the individual slot speeds accordingly—anything from 4.77 MHz for an 8-bit card to 25 MHz for a 32-bit card.

With all of these enhancements, the Zenith entry falls well within the performance range of the other 25-MHz machines we tested, although it does not qualify as one of the fastest in its class.

THE PRICE OF POWER As with many 25-MHz systems, performance doesn't come cheap. The Zenith base configuration alone is quite pricey, consider-

The unique Superset intelligent bus architecture is a feature of the Zenith Z-386/25. It detects the speed of each interface card at boot-up and runs the individual slot speeds accordingly, from 4.77 MHz for an 8-bit card to 25 MHz for a 32-bit board.

Only Microsoft Works can make a business this size look this big.

You're looking at the only integrated software program to give small and home businesses all the horsepower they need now.

And all the growing power they'll need later. Microsoft® Works.

Fact is, only Microsoft Works gives you a complete set of computing tools to get you up and running in a minute—and keep you running for years.

That's because only Microsoft Works seamlessly integrates the perfect balance of tools and training for word processing, database, spreadsheet, graphics and communications. On a desktop or laptop, this means you can move data between all modules instantly. And work on any combination of tools at once.

Only Microsoft Works has a built-in training system to guide you through every step,

of every command, of every program. And give quick, real-world lessons so you can be productive in your first five minutes.

Plus: For a limited time, when you buy Microsoft Works, you'll get a copy of Andrew Tobias' Checkwrite Plus® right inside the box—free. A \$50 budgeting and checkwriting system that can do everything but sign your checks—now free.

Only with Microsoft Works. Look into it.

Because we realize that small businesses don't ever have to look small. Or stay small.

Microsoft
Making it all make sense.

Trading Post™
— just \$79

- The ultimate
PostScript®
printing utility

Now Your PC Software Can Speak PostScript!

Trading Post is an inexpensive software utility that will show your PC software how to run your PostScript printer! Now you can turn out everything from spreadsheets to database reports on your PostScript printer — in any style you'd like!

It's Simple

No switches! No emulations! Just print as you normally would. Trading Post lets you freely switch between software that supports PostScript and software that doesn't. Trading Post handles the change for you — *automatically!*

Pick a Font, Pick a Size!

Trading Post gives you complete control over your page layout. Pick a small size for reports. Or turn the page sideways for ultra-wide spreadsheets.

Unconditional Guarantee

For only \$79, you can rely on PostScript for all your printing needs. And, Trading Post comes with a 30-day money-back guarantee, toll-free technical support, and free two-day shipping. Try it at no risk.

Zenith Z-386/25

Zenith Data Systems
1000 Milwaukee Ave.
Glenview, IL 60025
(800) 842-9000
(312) 699-4800

List Price: With 2MB RAM, 1.44MB 3½-inch floppy disk drive, DOS 3.3, \$6,599; with 70MB hard disk, VGA monochrome monitor, \$9,298; with VGA monitor, \$9,698, with 150MB hard disk, \$10,298; 1MB RAM upgrade, \$799.

In Short: This machine offers a 25-MHz processor, an intelligent I/O bus, and RAM shadowing in an impressive and fairly priced machine. Zenith will never be known for cut-rate goods, but compared with IBM and Compaq, its prices are competitive. Team this machine with a Zenith flat-screen monitor and smile as you fly.

CIRCLE 606 ON READER SERVICE CARD

ing that it includes only 2MB of memory and no hard disk or monitor. The tested unit, with the standard 2MB of RAM, 155MB CDC hard disk, DTC controller, and Zenith's flat-screen monitor, lists for a hefty \$10,298. Luckily, Zenith machines are often discounted aggressively, both individually by dealers and in group contract purchases.

The full-sized desktop case can hold only four half-height drives. The limitation isn't so damaging considering that one of the drives can be a full-height 320MB model. The 200-watt power supply has four connectors for the storage devices and is aided by two system fans to keep it cool inside.

There are four 32-bit and three 16-bit full-length expansion slots. (Eight-bit cards will work in the 16-bit slots.) With the standard complement of one parallel and one serial port, 16-bit VGA card, and hard/floppy disk controller, four slots are free.

The motherboard can take up to 8MB directly. An additional 24MB can be added using 32-bit expansion cards, for a 32-bit system maximum of 32MB of RAM. The motherboard also has sockets for the 80387 and Weitek math coprocessors.

Zenith supplies this machine with *Microsoft Windows/386* and an enhanced

version of MS-DOS 3.3. Like DOS 4.0, Zenith's DOS 3.3 Plus can work with drive partitions greater than 32MB. Zenith's implementation, however, stores drive table information in an unusual location. The result is that some standard drive or directory maintenance and utility programs just won't work.

ADDED EXTRAS We tested the Z-386/25 with Zenith's gorgeous high resolution VGA flat-screen monitor. You may not notice much difference if you're working only in monochrome applications, but for anything that uses color, the Zenith flat screen goes beyond eye-catching.

A big plus is Zenith's nationwide network of authorized dealers. It's nice to be assured of having a place to take your computer should it need service.

Teamed with the fast and beautiful flat-screen monitor, the Z-386/25 makes a terrific tool, especially for CAD and desktop publishing applications where both speed and display quality are terribly important. If you can get one at a good price and don't care about the nonstandard way it stores drive information, this is a machine that should keep you happy for some years to come. —**Bruce Brown**

ZEOS INTERNATIONAL LTD.

ZEOS 386-16

ZEOS 386-20

ZEOS 386-25

The Zeos International line of zero-wait-state 386 computers—the 386-16, 386-20, and the 386-25—are a quality alternative to higher-priced 386 systems. Backed by a 1-year parts and labor warranty, these speedy, well-built machines offer value to cost-conscious buyers. And a no-questions-asked, 30-day money-back guarantee helps ease apprehensions of potential purchasers.

Zeos is in the process of furthering its commitment to customer support by establishing a relationship with a nationwide service organization. It soon expects to furnish on-site service during the 1-year warranty period and to offer optional extended coverage as well. In its eighth year

in operation, Zeos seems to be striving to become a very serious contender in the clone market.

The base prices of the 16-, 20- and 25-MHz machines (\$1,945, \$2,545, and \$3,545, respectively) all include 1MB RAM and a floppy disk drive, as well as parallel and serial ports. In addition, Zeos also offers plenty of customization options. Each model, for instance, may be configured with a variety of hard disks, disk controllers, video cards and displays, floppy disk drives, RAM configurations, and motherboard options.

You can even have Zeos house your custom configuration within a small (XT-sized) desktop, a medium (AT-sized) desktop, or a tower case. Though the small case may be appealing for its eight full-sized expansion slots and space-saving styling, prospective buyers should note that there is only enough room to accommodate three internal half-height drives and/or tape backup devices. Compare that with the AT- and tower-sized systems, which can house at least four drive or tape devices.

Given all the flexibility to mix and match cases and components among the three basic product lines, the primary feature that distinguishes these machines is, naturally, speed. The Zeos 386s' overall performance compared favorably to the rest of the machines we reviewed, ranking near the top on the all-important 80386 Instruction Mix test. Here's how they matched against each other: using a composite of overall processor and memory access speed, the 20-MHz unit outperformed the 16-MHz model by approximately 25 percent. The difference was less dramatic, but still evident, between the two faster machines, with the 25-MHz model taking a 15 percent lead over the speed of the 20-MHz unit.

ZEOS 386-16 The small-case unit we tested included a compact, pristine VLSI American Megatrends motherboard with 64K static RAM cache memory, a 16-MHz Intel microprocessor, and the AMI Mark II 386 BIOS. Two megabytes of RAM were loaded onto an accompanying 32-bit expansion card. An Adaptec floppy and a standard-issue MFM hard disk controller, a Paradise Professional VGA card,

and a serial/parallel card filled three of the system's six 16-bit slots. With a 40MB Seagate hard disk, Tatung VGA color monitor, and DOS 3.3, the entire system retails for \$3,838.

Because of the compact style of the motherboard, the small-case systems offer the least opportunity for memory expansion. But at a practical system maximum of 8MB of 32-bit RAM, using 1-megabit

PC Voice Mail, now only \$199.

For an ear-opening telephone demo call:
1-800-6-WATSON Ext. 132

Now get a combined PC-based voice mail, data modem, and telephone answering system—from only \$199. With Watson, you'll profitably improve your business communications with clients, colleagues, sales and service reps, field staff, vendors.

Benefits Of A \$20,000+ Voice Messaging System Or "Personal Receptionist" For As Low As \$199

Look at all of these advanced features:

Voice Mail—Watson's automatic telephone answering lets callers leave and receive messages of any length 24 hours a day, 7 days a week. Ends "telephone tag" with clients and colleagues. Forwards messages automatically to mobile phones and pagers. Retrieve messages from any touchtone phone—even a car phone. Never miss an important call! And Watson provides "big system" professional sound quality!

Up To 750 Private "Mailboxes"—Give up to 750 of your colleagues or clients an individual, confidential "voice mailbox." Use them to receive private messages or record special messages for individual callers.

Electronic Telephone Book—In one key-stroke, access any of up to 750 telephone numbers, then use automatic dialing and re-dialing if busy. Store key information on contacts and get it immediately when you need it.

Hayes-Compatible Data Modem—Comes complete with 1200 BPS Hayes-compat-

ible modem (or optional 2400 BPS modem). Transfer your data files and access Telex, E-Mail, Dow Jones, or other public databases.

Simultaneously Run Popular Business Programs—Run programs such as Lotus 1-2-3 while Watson records or delivers messages.

Plus—Watson efficiently guides callers through the options they have in leaving messages... Delivers special pre-recorded messages to individuals at pre-determined times... Automatically forwards messages to other telephone lines or numbers... Provides an electronic calendar with automatic alarms and telephone notification.

30-Day Risk-Free Trial Installation

Try Watson for 30 days. If you aren't 100% satisfied, send it back for a prompt and full refund. No questions asked.

Demo Hotline

For a telephone demo call 1-800-6-WATSON EXT. 132 (in MA 1-508-655-6066 EXT. 132). Tell us EXT. 132 and receive a free live pack of diskettes if you purchase.

Order Hotline

To order Watson call 1-800-533-6120 EXT. 132 (in MA 1-508-655-6066 EXT. 132). Tell us EXT. 132 and receive a free live pack of diskettes with purchase. Price: \$199. For optional 2400 BPS modem add \$100. MasterCard, VISA, and American Express accepted. Credit card or check must accompany order.

EVEN A HAYES MODEM IS ONLY AS GOOD AS ITS SOFTWARE.

If you made the finest modems in the world, would you trust their performance to someone else's software? Software you knew really couldn't deliver?

We couldn't. So we created the most advanced communications software possible for IBM® PCs and compatibles. Smartcom III.™

Smartcom III supports Hayes V-series™ features such as data compression and error-control as well as multiple sessions through both comports. It also incorporates a built-in text editor, a peruse buffer and a powerful scripting language called SCOPE.™ With the scripting capability of SCOPE, you can automate tedious functions and repetitive tasks as well as create custom communications solutions.

Yet with all its sophisticated offerings, Smartcom III's menu-driven interface makes it easy to use. And to make it easy for your company to buy, Hayes is now offering a Multi-Copy License that can cut costs by more than 35%.

So if you own a Hayes modem, it makes sense to get Smartcom III. It'll bring out the best in the best.

And if you happen to own a modem other than a Hayes, it still makes sense to get Smartcom III. Because it'll make the best of what you've got.

Hayes.

■ 80386 DESKTOP PCs

The Zeos 386-16, 386-20, and 386-25 make up Zeos International's line of well-built, zero-wait-state 386-based machines. Configuration options include XT-, AT- or tower-style cases, as well as a variety of drives, displays, video cards, controllers, and motherboards.

chips on both the expansion card and a piggyback board, in addition to a theoretical limit of 64MB using 4Mb chips, this restrictiveness is not likely to cause inconvenience for a large segment of users right now. Those who think they'll need at least 16MB (using 1Mb chips), however, should look elsewhere.

ZEOS 386-20 This AT-sized desktop unit was configured with an American Megatrends motherboard with 2MB dynamic RAM, 64K static RAM cache memory, the 20-MHz Intel microprocessor and AMI BIOS. An Adaptec floppy and RLL 1:1 interleave hard disk controller, Video Seven 16-bit V-RAM VGA card with 256K cache, and one serial and one parallel port were also included. Equipped with a 65MB 28-millisecond Seagate hard disk, DOS 3.3, and a Tatum VGA monitor, this peppy system sells for a relatively inexpensive \$4,483.

As with the other Zeos machines reviewed, you get eight full-sized expansion slots (one 8-bit, six 16-bit and one 32-bit); the 32-bit slot can double as an 8-bit slot if required.

The 64K static RAM cache (which is upgradable to 128K) is also included in the standard configuration of each Zeos system. In addition, the machines operate at zero wait states, so shadow RAM and memory interleaving features are not enabled in the default configurations in order to bolster performance. However, there are specific video operations, such as CAD/CAM applications, that would be

greatly enhanced by the use of shadow RAM; in cases such as these, the user would be wise to enable that facility with the setup disk.

ZEOS 386-25 A physically attractive powerhouse, the 25-MHz tower came equipped with 4MB of dynamic RAM, one serial and one parallel port, Seagate 65MB 28-ms. hard disk, and 1.2- and 1.44MB floppy disk drives powered by a Data Processing Technology RLL floppy/hard disk controller with 512K cache. As in the other systems, the company uses an American Megatrends motherboard with 64K memory cache and the AMI Mark II BIOS. The video setup mirrored that of the 20-MHz system. Together with DOS 3.3, this workhorse 386 retails for a pretty modest \$7,037.

One interesting design element found on the full-sized motherboards in the 25- and 20-MHz test units is the ability to accept both socketed DIP RAM and strip, or SIMMs, at the same time in 256-kilobit, 1Mb, or 4Mb chips; using the last would bring the motherboard capacity to a whopping 32MB of 32-bit RAM. Using 4Mb chips, the 32-bit expansion card and piggyback board each have capacities equal to that. Since the price, availability, and integrity of 4Mb chips are not yet assured, you'll have to be satisfied with the 24MB you can get by using 1Mb chips on the motherboard and on expansion and piggyback boards.

If it really wants great market share, there is one important aspect of all its prod-

SPF/PC®

*Bridging the
Micro-to-Mainframe
Editing Gap*

Now you can re-create the mainframe editing environment on your own PC with SPF/PC, the only PC editor functionally equivalent to editing with ISPF/PDF Version 2, Release 2 on MVS.

Files of virtually any size may be edited with SPF/PC because it uses all extended or expanded memory, or disk drive work space.

Mainframe users will especially appreciate SPF/PC's familiar commands, fast PC processing and micro-to-mainframe file portability. SPF/PC also offers:

- True split screen
- Directory/member lists
- Command stacking
- Binary file editing
- Hexadecimal editing
- Network support

Want proof? Ask for a free, interactive demonstration diskette.

EDITOR'S CHOICE

- DataWorld Data 386-20 and 386-25
- Dell System 310

When it comes to 80386-based PCs, what makes a PC Magazine Editor's Choice? Price is always a consideration. So are benchmark test results. But both factors can be deceiving, which is why we consider them in the context of other aspects that will make the difference months and years down the road. Things like quality of construction, reliability, expandability, and ease of service.

Out of 104 machines from 58 companies, we chose 10 that offer the most from the PC buyer's wish list—machines that vary in size, price, and even bus architecture. Two MCA machines are included; no machines using the competing EISA bus were released in time for this issue.

For overall excellence in both the 16- and 20-MHz categories, we selected Zeos International's **386-16** and **386-20**. Besides scoring impressive overall results on the PC Labs benchmark tests, these machines offer plenty of customization options, high-quality parts, and 64K static-RAM cache memory. The small-case 386-16 costs \$3,293 for a VGA system with 1MB RAM, a 65MB hard disk, and one 5¼-inch floppy disk drive. The AT-size 386-20 (\$3,788 in a similar configuration) provides the additional attraction of software-settable shadow RAM. There's more: Zeos adds a 30-day money-back guarantee, with no questions asked to its 1-year warranty service.

Also chosen was the **Micro I Power 386-16**. At \$2,550 (with 1MB RAM, 60MB hard disk, 5¼-inch floppy disk drive, and VGA monitor), this machine is a find for users who aren't bothered by the

- IBM PS/2 Model 70-A21
- Micro I Power 386-16

lack of good documentation. Its low price portends no sacrifice in performance. Also on its side are expandability to 16MB RAM, high-quality parts, and plenty of hard-disk options.

We picked four 20-MHz machines besides the Zeos. One strong showing is the **Dell System 310** (\$4,299 with 1MB RAM, 40MB hard disk, 5¼-inch floppy disk drive, and VGA monitor); this system best represents the mail-order firm's determination to stand up to the big guys. The System 310 uses the page-mode and interleaving functions of its Chips and Technologies chip set to whiz through most of its tests; brand-name parts and shadow RAM help, too.

DataWorld's **Data 386-20** and **Data 386-25** stand out in the 20- and 25-MHz categories for speed and quality construction. The minitower Data 386-20 (at \$3,893 for 1MB RAM, 66MB hard disk, 5¼-inch floppy disk drive, and VGA monitor) and the Data 386-25 (\$1,000 more for a similarly configured system) both merit consideration.

If the **Tandy 5000MC** is any indication of a Micro Channel future, then Micro Channel architecture is sure to grow in popularity. This machine's wealth of expansion options—with three I/O ports, floppy disk controller, and VGA running off the motherboard—add to the appeal of its impressive showing on PC Labs' benchmark tests. A VGA system with 2MB RAM, 70MB hard disk, and 3¼-inch floppy disk drive costs \$7,498. An added benefit of this machine over IBM's PS/2 Model 70s is that Tandy has left room for an internal 5¼-inch floppy disk drive.

- Northgate Elegance 386/20 and Elegance 386/25

Our last Editor's Choice in the 20-MHz category is the **Northgate Elegance 386/20** from Northgate Computer Systems—whose sturdy tower model, the **Northgate Elegance 386/25**, is a winner among the 25-MHz systems for its file-server potential. These machines sell for \$4,024 and \$4,624 respectively, with 1MB RAM, 68MB hard disk, two floppy disk drives, and VGA monitor. These prices include high-quality components, superior

Out of 104 machines from 58 vendors, we chose 10 that offer the most from a PC buyer's wish list.

documentation, top-flight performance, a grab bag of helpful utilities like the Super PC-Kwik disk manager and caching software, and other thoughtful measures. Another plus is that within the first year of purchase, Northgate will outright ship any replacement part without making you first ship back the defective unit.

Just one caveat: True to its nature as an innovator, Northgate continually upgrades its systems. Most changes should be for the better, but before you order you should

- Tandy 5000MC
- Zeos 386-16 and 386-20

be sure to double-check the configuration.

Also in the 25-MHz category is one company that pulls together all it's got to present a powerhouse machine: Big Blue. Although one more expansion slot would improve it even more, IBM's Model 70-A21 beats most of its competition in benchmark tests, thanks largely to 64K of cache memory and a different motherboard than the 16- and 20-MHz Model 70s use. As expected, this MCA machine does not come cheap; the price is \$12,195 for a VGA system with 2MB RAM, 120MB hard disk, and 3½-inch floppy disk drive. But it deserves special attention—more than the Model 70-E61 and -121 and the floor-standing Model 80s do.

Long after we finished our benchmark testing, we learned that IBM had temporarily stopped shipping its Model 70-A21 because of what the company claimed were engineering problems in the motherboard. Regardless of these difficulties, PC Magazine stands by its choice of the 70-A21 as a superior machine. We're confident that any changes made have been improvements—and whatever else one can say about IBM, it does not strand customers.

Honorable mention goes to Everex Computer Systems for its Step 386/16, 386/20, and 386/25. All three systems use a proprietary BIOS; since reliable alternatives exist from companies like Phoenix and Award, a proprietary BIOS not only differentiates the product line but adds uncertainty.

With all these systems to choose from, it's natural to look for corners to cut. Be careful, though, to avoid

snipping in places you'll regret later. For overall excellence and bang for the buck, we contend that a 20-MHz system is the best way to go. But if your needs take you into file servers, CADD, high-end graphics, software development, or artificial intelligence, consider a 25-MHz machine instead. For about one-third more money, this will offer the performance necessary for specialized applications. (See the sidebar "Buying Smart: The Right System for Your Needs.")

Keep in mind that every 386 machine deserves a VGA or Super VGA monitor rather than an EGA. If you're cost-constrained, buy a monochrome VGA system rather than a Hercules-compatible system; monochrome VGA uses the same adapter as color, making for an easy upgrade later. And don't short-change yourself on disk capacity. While a 386-16 can often get away with a 40MB ST-506 hard disk, with 20- and 25-MHz systems it's best to consider a faster ESDI drive of 90MB and up.

A word on behalf of the 386s we didn't select for Editor's Choice. We at PC Magazine are the first to say that 386 technology represents the cutting edge of personal and workgroup computing. And undoubtedly there's no clear demarcation between the winners and a dozen runners-up. Not being chosen is no mark of shame; those we selected simply offer an outstanding combination of factors that make for a top-quality machine. Among the unchosen are several models from large companies like Compaq, Hewlett-Packard, and Zenith—plus Advanced Logic Research (ALR), which received PC Magazine's

Award for Technical Excellence last November.

Compaq, the sales leader of 386-based computers, sells machines that are rugged, dependable high-performers. Nevertheless, these machines achieved only average scores on our benchmark tests. They remain expensive, both for standard configurations and for upgrades, and they offer no tower unit that can be used as a multidrive file server; instead you must buy an expansion box. With the ever-increasing number of competent 386 vendors putting together top-notch computers for fewer dollars, it's getting tougher and tougher to justify a high-end PC purchase. Still, no one ever got fired for buying Compaq.

ALR has come down a peg over time. Several units we tested over an extended period (and others we bought) exhibited quality-control problems—nothing that couldn't be fixed with more attention to detail on ALR's part, but enough to raise eyebrows at PC Labs.

With its Z-386/25, Zenith (a favorite of the federal government) scored poorly in benchmark tests despite such enhancements as shadow RAM, 64K of cache memory, and the ability to set slot speeds individually. Its high-resolution flat screen monitor is gorgeous, but the computer's base configuration is pricey.

Likewise, the Hewlett-Packard 386 line exhibits quality workmanship, performance, and dependability. But its top-dollar prices, which aren't discounted as heavily as Tandy's, kept the HPs from being selected for an Editor's Choice—this time. Keep an eye on this company.

JUGGLE YOUR TSRs WITHOUT LOSING CONTROL.

EXTRA™ The innovative memory manager that gives you single keystroke access and control over all your TSRs.

Using RAM resident programs (TSRs) is a tough juggling act. One slip, one wrong keystroke, and they all come crashing down. Now you can get a grip on up to 26 TSRs while your computer uses only the memory of the largest program (plus 35K for EXTRA). Free your valuable RAM for applications, save your programs to hard disk using extended or expanded memory and tame those memory-hungry TSRs with EXTRA. There's even a toll free "EXTRA Support" hotline.

SAVE \$\$\$ ON POPULAR TSRs!

In Short: The Zeos 386 line offers a full complement of eight expansion slots with room for three half-height media devices at very competitive prices. The workhorse in this round-up, the Zeos 386-25, is a powerful and attractive machine that any user with truly demanding performance requirements can't afford to overlook.

ucts that Zeos should consider upgrading: the documentation. Since each system from Zeos is practically custom-built, this would be undeniably complicated. Zeos, however, claims to have just created its own systems documentation and should be shipping it soon.

Overall, Zeos appears to have the staying power and the proper balance in its product/pricing/technical and service matrix to compete successfully in this formidable market segment.—Stephen Lewiski and Philip J. LaRossa

Introducing the CAT Reader OCR for Hand Scanners.

Now there's an OCR for your PC that allows you fast, accurate conversion of scanned text for only \$295.00. The CAT Reader is pre-trained, as well as fully trainable, to read virtually any font (monospaced, proportional, typeset). And can automatically pull split columnar scans into complete pages while reading text at 200 dpi. You can even mask out unwanted graphics. The CAT Reader supports Complete PC, Logitech, Mitsubishi, Nisan and more. To direct order, or for more information, call 214-631-6688 or Fax 214-631-4059 (Visa, M/C or AmEx). A frisky OCR at a finicky price.

Accounting Software So Sophisticated It Even Lets You Multiply.

Small business will get off to a jackrabbit start with ACCPAC® Easy.

As your business grows by leaps and bounds, move up to ACCPAC® BPI®.

Even the most sophisticated breed of business is handled by ACCPAC® Plus.

The simple truth is, the business of business is to grow. The sad truth is, most accounting software can't handle that. Built-in obsolescence seems to be a standard feature.

Which is one of the most compelling reasons to consider the ACCPAC® line. Because it is precisely that: a line. A smooth, efficient path for expansion. Allowing you to transfer data when you trade up.

The starting point is ACCPAC Easy, our primer. Offering "excellent audit trail features," according to *Software Digest*.

And here's where you trade up to: our five module workhorse, BPI Accounting. *PC World* calls BPI "an outstanding value."

Finally, our powerhouse, ACCPAC Plus offers predesigned, off-the-shelf solutions for a wide variety of businesses. Rated "best in its class" by *InfoWorld*, Plus offers the ultimate in control.

And we offer even more.

Like significant rebates for the ACCPAC software you already own. And the stability and support that come from the world's leading independent software company.

Call 1-800-531-5236. In Canada call 1-800-663-6904.

We'll tell you more about ACCPAC, our rebate program and what we can do for your business. Namely, help it grow.

CAN YOU SPOT THE \$700 DIFFERENCE?

One of the nearly identical samples you see above was printed with the HP Laserjet Series II. The other is from the Mannesmann Tally* MT905. Both are reprinted here exactly as they came out of the printers.

But what might surprise you is the rather dramatic difference in the manufacturers' suggested retail prices.

The Mannesmann Tally laser is \$700 less. Yet it offers the same high quality output, lowers operating costs 25 percent, and prints at six pages per minute.

The MT905 comes with the same resident type fonts as HP, accepts standard HP font cartridges, and lets you choose optional memory upgrades from one to four megabytes.

MT905 Specifications

- Technology: scanning laser.
- Print Speed: 6-pages per minute.
- Resolution: 300 x 300 dpi.
- Emulations: HP Series-II, [optional emulations: Epson, IBM® Proprietary, & Diablo 630.]
- Standard I/O: Serial & parallel.
- Memory: 512K. [upgrades: 1, 2, & 4 megabytes.]
- Typefaces: Courier medium & bold, line printer, accepts standard HP font cartridges or any downloadable font in HP format, 6-resident fonts + 2 font cartridge slots.
- Paper Handling: 250-sheet input & output bins. Manual feed handles single sheets, envelopes, transparencies, and labels.
- Workload: 4,000 pages-per-month.
- Suggested Retail: \$1,995.

For more convenient paper handling, the universal paper cassette holds letter, legal, and international sizes, plus up to 15 standard envelopes. You can choose face-down output to keep long documents in the right order. And the manual feed lets you print labels or transparencies.

So any way you figure, the answer still comes up the same. The Mannesmann Tally laser looks perfect. And so does the price.

For the name of your nearest dealer, call the toll-free number listed below.

MULTITASKING WITHOUT OS/2

Both Microsoft Windows/386 and DESQview 386 give your 386 machine multitasking capabilities with today's DOS applications. Here's how to optimize their performance.

Someday we may all be able to take advantage of the multitasking capabilities of OS/2—but work can't always wait for someday. That's why *Microsoft Windows/386* and *DESQview 386* are so popular today.

Either of these programs can provide your 80386-based PC with an advanced multitasking operating environment that lets you switch instantly between the DOS applications you already have and know. Working with simple, on-screen instructions, you can quickly turn your machine into a number of "virtual" machines, each of which can simultaneously run a standard DOS program.

You can get either *DESQview 386* or *Windows/386* running in only a few minutes, but with a little extra tinkering and a little customization, you can unleash even more power from these already powerful environments. This installment of PC Lab Notes will show you how you can optimize memory usage, automate everyday routines, and even improve their speed. To help you decide which program is best for you, we'll start by looking at how each works and then consider ways to maximize their performance.

MEMORY MANAGEMENT Before selecting either program, you should make sure that you have enough and the right kind of memory. Although both *DESQview 386* and *Windows/386* will work with less, you won't be happy with their performance unless you have at least 2 megabytes of RAM in your system. Four or more is better still. The kind of extra mem-

ory you add will have a dramatic effect on the performance you get from these operating environments.

Both *DESQview 386* and *Windows/386* are designed to use both conventional and extended memory. Conventional memory is the 640K that's normally used by DOS programs. It's sometimes called real or real-mode memory because that is the operating mode that 80286 and 80386 microprocessors use when they emulate the op-

eration of the 8088 microprocessor used by PCs, XT's, and PS/2 Models 25 and 30.

Extended memory is memory that cannot be addressed by 8088 microprocessors. It's sometimes referred to as protected-mode memory because 80286 and 80386 microprocessors use this memory area when they are operating in their protected mode.

Neither *DESQview 386* nor *Windows/386* want, use, or even expect to find any expanded memory in your system. Instead, both programs emulate the EMS (expanded memory specification) themselves, turning extended memory into expanded memory both for their own use and for the use of programs designed to take advantage of it. How the two programs allocate the available memory resources is detailed in Figures 1 and 2.

In *Windows/386*, the facilities for converting extended memory into expanded memory are built into the program itself and work automatically whenever you load it. *Windows/386* will co-reside with other expanded memory systems (such as an Intel Above Board and its software driver), but if any such expanded memory is installed in your system when *Windows/386* is loaded, the multitasking environment will completely ignore it. In practical terms, this means that if you run *Windows/386* part of the day and want to provide expanded memory to applications outside that environment, you can install and access EMS as you normally would. However, any separately controlled EMS memory will not be available to *Windows/386*.

Microsoft Windows/386 Memory Map

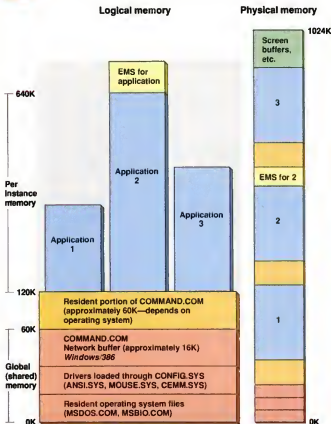

Figure 1: In the Windows/386 memory scheme, physical memory that's shared by all virtual machines is called "global memory," of which only about 60K is required from the host computer system. However, each virtual machine running under Windows/386 loses a corresponding 60K from the 640K addressing range available to the applications running within it. The balance of the RAM in the system is divided among virtual machines according to the parameters in the .PIF file associated with each machine. Of the memory assigned to a given machine, called "per instance" memory by Microsoft, only a few kilobytes are used for system overhead. The rest is available for running applications. Windows/386 can dynamically allocate any part of memory for any purpose, so the memory used by the various virtual machines cannot be readily distinguished.

DESQview 386 presents a different situation. The program is actually made up of two separate products: *DESQview 2.2*, which will run on nearly any system, and its extraordinary memory manager, *QEMM-386*, which taps the specific features of the 80386 microprocessor to give *DESQview* more memory to romp in. One of *QEMM-386*'s jobs is to create EMS 4.0 memory for use by *DESQview* and by your applications.

Unlike *Windows/386*, however, *QEMM-386* does not get along with other expanded memory drivers, and trying to use *QEMM-386* together with the software driver that accompanied your expanded memory board may cause your system to crash. If you need to run 1-2-3 with large, expanded-memory-only spreadsheets, you can do so simply by running 1-2-3 under *DESQview 386*.

Alternatively, you can switch the memory on your EMS board to extended memory and let *QEMM-386* turn it into expanded memory. Because the *QEMM-386* driver will provide EMS support even when your multitasker isn't loaded, a program like 1-2-3 will still be able to exploit EMS memory from DOS.

When you add memory to your system for either *Windows/386* or *DESQview*, the best choice is always fast 32-bit RAM. In most cases, that means adding the proprietary RAM expansion boards sold by the maker of your computer.

Unfortunately, proprietary RAM memory boards are usually the most expensive kind to add. That's not because the chips are 32 bits wide (actually, nearly all personal computer memory is made from the same kind of 8-bit memory chips), but because no clear standard has been established for 32-bit memory boards. Consequently the boards for Compaq, Tandy, IBM, AST, and other 386-based PCs are not interchangeable. Low volume and a controlled market make for higher prices. Your long-term upgrade option is something to keep in mind when choosing a 386 PC brand.

If you already have an EMS board, you can generally use it to enhance your system and give either *DESQview 386* or *Windows/386* more working room. What you must do, however, is set up the board to give you extended memory, not expanded

The DESQview Memory Map

The DOS programs are actually loaded into physical memory located above 1MB (1,024K). The virtual machines are then mapped into the area below 640K when the program code is running. DOS can then see any of the areas. The DOS area is mapped from the same physical location into the same logical location in each virtual machine. DESQview makes sure that DOS is not active in more than one program at a time, and that any information required to be specific to that program is saved and restored from the DESQview data areas.

- 1 The EGA/VGA graphics area is a 64K RAM window into 256K memory on the board. Graphics programs bank-switch "planes" into this area and then update the bits for a particular color.
- 2 This is the area for text display. Usually there is only one monitor. If so, then the 32K unused area is used to store part of DV.EXE. The XDV.COM program breaks up the DV.EXE file into pieces and puts them into these disjoint areas.
- 3 This area may have other ROMs and could be configured differently; this is just an example. The DOS buffers and network shell were placed here using QEMM-386's LOADHI feature. Other TSRs could be in this area as long as enough space is free. The DV.EXE part is placed into this area by SDV.COM; it is usually 40K to 60K in size.
- 4 The EMS page frame is for the use of programs that use expanded memory. In addition, about 32K of DV.EXE is stored here by XDV.COM.
- 5 This address range is the first 64K of extended memory. It is accessed by turning off the A20 wrap in the computer's hardware. Thus a segment starting at FFFEH can access almost 64K of contiguous memory. This is a very touchy area, and only those extremely familiar with its restrictions should try to access it.

- 6 This is a program that may be huge in size, several megabytes if needed (such as *Paradox 386* or *IBM's Interleaf*). It is designed and linked with a DOS extender that supports the Quarterdeck/Phar Lap Virtual Control Program Interface (VCPi). It has a small (about 150K) area that must be mapped below 640K. The rest is actually above 1,024K in a large, contiguous area. The DOS extended area controls moving in and out of real mode. Several such large programs may be loaded.

Figure 2: As with other 80386 memory managers, DESQview maps each virtual machine, which may use physical memory in the extended addressing range, into the DOS 640K addressing range during the time-slice that machine is executing. While the code used by each machine is loaded above DOS, DESQview keeps only one copy of DOS in memory so that physical memory is not wasted on redundant copies of the operating system. In the latest versions of DESQview, the operating code for the environment is executed in high memory, freeing up more of the 640K DOS range for use by applications. Extended memory can be used for application code as well as for expanded memory that can be shared among all virtual machines.

INCREASE YOUR NETWORK PROFITS

With a **MULTUSER** accounting software package from Cougar Mountain. No more lost data, no more corrupt files. Cougar Mountain's Act 2 Accounting software guarantees data integrity with a true record and file locking feature. Proven reliable in thousands of locations over the last seven years, Act 2 offers you security and integrity in a multi-user environment.

Without it, you're running a risk.

Cougar Mountain's Act 2 offers you a multiuser environment at a price that beats the competition. For thousands of dollars less you get the quality and many of the features of the big-buck accounting packages. And we don't cut corners.

We support the following networks: Novell Advanced Netware - 2.0, 2.0a, 2.1, 2.11, 2.12, ELS, ELS II, SFT, IBM Baseband, Token Ring, AT&T Starlan, Network OS, LANtastic, Concurrent DOS 6.x, PCMS 2.10, Grapevine, TOPS.

Lookup Windows throughout

General Features

Multi-user with record and file lock
"LOOKUP" Windows throughout.
Menu driven with 2 help references.
Multi company and report generator.
Sample data files included.
Complete audit trail.
All modules can post to multiple profit centers
Fully integrated with single source entry.
Date sensitive user-defined fiscal calendar.
User defined financial reports.
User can design checks, invoices, statements & W-2s.
User defined chart of accounts, account numbers & stock numbers up to 15 alphanumeric.

General Ledger

Allows for multi-company ledgers.
Unlimited multi-level accounts for departmentalized reporting.
Allows recurring journal entries.
User can process transactions 2 periods into next year.
Allows budgeting.

Accounts Receivable

Open invoice and/or balance forward.
Allows unapplied payments.
Prints statements.
Handles recurring accounts receivable.
Supports partial payments and finance charges.
Allows unapplied credit memos.
Up to 5 user-defined aging periods.
Mailing labels and reports with 7 different sorts.

Inventory

Supports LIFO, FIFO, weighted averages and standard cost.
Supports markup, margin or list.
Allows up to 4 places to right of decimal for unit cost and price.

Sales Invoicing

Supports service or product oriented businesses.
User-defined tax tables including multiple sales taxes.
Prints packing slips.
Prints invoices.
Alerts user to customer exceeding credit limit.
Sales history reports.
Automatic updating of inventory daily.
Allows return credit memos.

Accounts Payable

Can post up to 200 general ledger expense accounts per invoice.
Prints checks.
Automatically prepares payments.
Supports partial and handwritten checks.
Processes credit and debit memos.
Computes discounts and records discounts taken.

Payroll

Generates automatic payroll.
Provides up to 8 user-defined rates.
Allows post facto payroll.
Allows distribution of payroll expenses to user-defined departments.
Benefits and deductions are calculated on fixed amounts.
Hourly amounts, percentage of gross or variable.
Allows additions to gross which may be taxable, nontaxable or partially taxed.
Handles 401K and cafeteria.
All tax tables easily updated by the user.
Handles payroll draws, per diem pay, contract and piece work, hourly and salary.
Handles tip accounting.
Prints checks and W-2s.

■ PC LAB NOTES

memory. Any memory on the board that you configure as expanded is likely to be wasted. The instruction manual provided with your EMS board will explain how to set the DIP switches (or its other configuration options) to yield nothing but extended memory.

Note that some EMS boards provide configurations that allow you to defeat some of the base memory of your system to take advantage of the greater bank-switching ability of EMS 4.0 memory. Don't select this option if it is offered. Not only will such a strategy not help, it will actually steal memory from your applications. Just configure your system for the maximum possible DOS memory.

Because nearly all AT-style memory boards use a 16-bit bus interface, this add-in memory won't work as fast as the 32-bit base memory of your 80386-based system. Because these operating environments start allocating memory with the conventional DOS memory area first and then take memory from the extended addressing range, the first program or two you load will generally run fastest. Thus you should always load your most important application first if you're using a 16-bit memory board.

In most cases, you won't be able to use 8-bit expanded memory boards that were designed to add EMS to PCs and XT's. Such boards usually don't offer you the option of using them in an extended memory configuration. Even if they did, however, you wouldn't want to use them in a multitasking 386 operating environment. They would impose so many wait states that your system's performance would be unendurably slow.

MOUSE PRIORITIES Curiously enough, the interrupt that you assign to your mouse when you set it up will affect how smoothly other programs will operate with *DESQview 386* or *Windows/386*. If you have a bus mouse, you're best off assigning it to use interrupt 5 (which is set up via a jumper). A serial mouse is best run via interrupt 4, which is what you select when you assign the mouse to use COM1. (Although this scheme may seem to defy logic, COM2, which you will then use for your modem, has a higher priority than COM1 because it uses interrupt 3.) These

interrupts have lower priority than the others that are available, putting the mouse further down the line when demands are made on system resources.

The reason for giving the mouse a low priority is that many mouse drivers have a tendency to lock system interrupts for inordinately long periods. This can cause problems for devices that use interrupts with lesser priority. For instance, if your mouse has a higher priority than your serial port

■ Both *DESQview 386* and *Windows/386* take away a lot of the attraction of TSRs. After all, if you can pop *anything* up instantly, why settle for tiny, limited applications?

and you're engaged in high-speed communications, you may lose characters when the mouse locks the interrupts. Giving the mouse the lower priority will reduce such problems.

TAMING TSRs Both *DESQview 386* and *Windows/386* take away a lot of the attraction of TSR programs. After all, if you can pop *anything* up instantly, why settle for tiny, limited applications? Still, people like to work with the utilities they've become familiar with, and habit might lead you to load your TSR programs as you always have, before starting the multitasking environment.

That's not a good idea for a couple of reasons. For one thing, strange conflicts are likely to crash your system at odd times. In addition, loading utilities *before* the new operating environment will reduce the memory available to each and every virtual machine the environment creates.

Remember, even when running under a multitasking environment with more than 1MB installed, your normal DOS programs still see only the normal DOS envi-

ronment, with its 640K addressing limit. Applications, active terminate-and-stay-resident (TSR) programs, and device drivers must all share this limited address range. Instead of having 600K available to programs within a virtual machine, a heavy load of TSR utilities could cut the potential down to 300K or less—no matter how much memory you have physically installed in your system.

The best technique, then, is to load each of your customary pop-up utilities into its own virtual machine and leave it popped up. Then simply use the facilities of the operating environment to switch to that virtual machine whenever you need the TSR. By taking advantage of the facilities made available by the multitasking environment in this way, you can squeeze a bit more useful space from the megabyte of real-mode addressing range, making more memory available for every virtual machine that you run.

The considerations that have been discussed so far apply both to *DESQview 386* and to *Windows/386*. Now let's turn to some specific advice for each of the two environments, beginning with the *DESQview 386* program.

OPTIMIZING QEMM *QEMM-386* is a device driver, which means it must be loaded through your system's CONFIG.SYS file. When you're through with the *QEMM-386* modifications that I'll explain below, your CONFIG.SYS file will probably look something like this:

```
DEVICE=VDISK.SYS
DEVICE=QEMM.SYS RAM ROM I=P000-F7FF
DEVICE=LOADRES.SYS ANSI.SYS
BUFFERS=2
FILES=40
```

While it's best to load disk drivers (such as those that give you extra hard-disk partitions) before *QEMM*, the line beginning *DEVICE=QEMM.SYS* should be near the top of the CONFIG.SYS file. The most important consideration in loading *QEMM* is that it should run before any programs that may use expanded memory, such as disk caches or print spoolers. Since *QEMM* creates the expanded memory that these programs will use, obviously it must be set up first.

As shown above, you will want to include the word RAM on the *DEVICE*

■ PC LAB NOTES

=QEMM.SYS line. This instruction causes QEMM-386 to map extended memory into all the available places above the normal DOS area in the real addressing range of your microprocessor, making it available to DOS-based real-mode programs. In effect, this memory becomes available for loading device drivers and TSR programs outside of the DOS 640K memory area. (Such real-mode memory outside the normal DOS area is often called high memory because it represents the high end of the real-mode addressing range.)

Some computer systems have unused gaps in the real addressing range above the DOS 640K that even QEMM-386 can't find by itself. By specifying these gaps on the DEVICE=QEMM.SYS line, in some systems you can recover 48K or more of extra real-mode memory space that QEMM-386 would otherwise miss.

For example, if you have a Compaq Deskpro 386 with an EGA video board, simply including the command I=E400-EFFF on the QEMM.SYS line will free up about 48K of space for RAM. If your Compaq 386 has a VGA board, using the command I=E600-EFFF will give you an extra 40K.

With many system boards, you can re-instate the area that IBM reserves for its ROM-based Cassette BASIC language interpreter by including the instruction I=F000-F7FF shown above. Most non-IBM computers otherwise allow this address range to lie fallow. Even with a PS/2 Model 70 or 80 you can recover this area if you don't ever plan to use interpreted BASIC. By making use of this option, you will add an extra 32K to high-memory space for drivers and TSR programs.

To take advantage of such otherwise-wasted areas of real-mode memory, DESQview 386 includes two special loader programs: LOADHI.SYS, which moves ordinary DOS device drivers into high memory; and LOADHI.COM, which does the same for TSRs. To use LOADHI.SYS, instead of loading device drivers directly through the CONFIG.SYS command DEVICE=driver name, you instead specify

```
DEVICE=LOADHI.SYS driver name
```

This will put the driver into high memory, as illustrated in the CONFIG.SYS file

above, with the ANSI.SYS terminal emulator.

By using the LOADHI.SYS loader to move device drivers out of the normal DOS 640K addressing range, you'll have more memory for executing programs in all the virtual machines you use under DESQview. You can use LOADHI.SYS repeatedly for as many drivers as you normally load.

Because most device drivers are small

■ To move TSR programs into high memory, you simply add the command LOADHI before any line in your AUTOEXEC .BAT file that loads a TSR program.

(except for some used by networks), you're unlikely to run out of room for them above DOS. But you may discover that some of the device drivers that you normally use won't work when loaded into high memory. Unfortunately, the only way to find out what works and what won't is by trial-and-error testing. Thus, you'll want to convert your DEVICE= into DEVICE=LOADHI.SYS entries one at a time, rebooting your system after each change.

When setting up QEMM-386, you'll also want to change the BUFFERS= line in your CONFIG.SYS file. As a memory manager, QEMM-386 sets up its own disk buffers, so you don't have to waste memory space on those created by DOS—even if the applications you intend to run recommend that you put a specific BUFFERS=xx line in your CONFIG.SYS file. Make your CONFIG.SYS entry BUFFERS=2 instead of some larger number.

On the other hand, don't skimp on the number that follows FILES= when updating your CONFIG.SYS file. This number tells DOS how many file handles to have

ready. This specification determines how many files DOS can juggle at the same time, and it costs very little memory to provide for additional handles. You may even want to increase this number to allow you to have more files open at the same time; 40 or 50 is probably about right.

QEMM-386 gives you one further option for your CONFIG.SYS file. Adding the word ROM on the DEVICE=QEMM.SYS line, as shown above, will cause QEMM-386 to copy the code in your machine's BIOS routines from ROM into faster RAM memory, then map this fast RAM into the address range formerly used by the ROM. This technique, sometimes called shadowing ROM, is built into the hardware of many (but not all) 80386-based computers. QEMM-386 simply duplicates the process in software. If your 80386 computer already has a ROM shadowing option built in, you should use that instead of the QEMM-386 option. If it does not, QEMM's ROM option will speed up the operation and display of nearly everything that you do with your computer. Note that some machines allocate a full 384K for shadow ROM. In this case, disabling the built-in shadow ROM and using QEMM-386 will be beneficial because QEMM-386 will use up much less than 384K.

PROGRAMS IN HIGH MEMORY

While device drivers are the province of your CONFIG.SYS file, loading TSR programs into real memory beyond the 640K DOS barrier requires a bit of tinkering with your AUTOEXEC.BAT file. For this purpose, DESQview 386 provides a program loader called LOADHI.COM. This program works like the device loader LOADHI.SYS, but instead puts TSR programs into high memory. To move TSR programs into high memory, you simply add the command LOADHI before any line in your AUTOEXEC.BAT file that loads a TSR program. If, for example, you load SideKick from your DOS directory with the AUTOEXEC.BAT entry

```
\DOS\SK
```

you should change it to

```
LOADHI \DOS\SK.
```

LOADHI.COM will put as many pro-

The Only Keyboard That Guarantees Faster Typing Speed and Greater Productivity...

Here's why: OmniKey puts the keys where trained fingers expect to find them. The F Keys are on the left—far easier to hit. Control or Alt the way most people learned and hands down the most logical format.

The ESC key is next to #1 on the top row; CTRL is next to A with SHIFT and ALT keys stacked below—just where they belong.

OmniKey/102's Click/Tactile touch has been hailed as superior even to the IBM keyboard. It's crisp, tactile and much less noisy.

Weighing in at about five pounds, the OmniKey/102 has a solid steel base and rubberized legs so it sits on your desk to

stay. No sliding around as with other keyboards!

And at \$99.00 with a 10-day money-back unconditional refund policy, you can't make a mistake when you order OmniKey. A three-year UNCONDITIONAL WARRANTY (anything breaks, we fix it Free) further secures your investment.

Every month, thousands of keyboard users discard those mushy bargains that come with most systems—clones and big name brands as well—and buy OmniKey. Phone Northgate now...we'll have your OmniKey on its way in just a few days.

OmniKey is compatible with: Most PC, XT, AT and 386 IBM Compatibles including Compaq, AST, Everex and most Zenith Models. IBM PS/2, Dell, AT&T 6300 require adapters at extra cost.

ACTUAL SIZE
20 1/2 x 7 1/2

OMNIKEY/102...

Now compatible with Compaq, AT&T 6300, Leading Edge, Zenith and most others ...

Simply...
the Finest!
OMNIKEY/102

"If a computer system won't accept a Northgate keyboard, I won't buy it...on a subjective 1-10 point scale of mush to well-defined feedback, I would rate the Compaq keyboard as a 1, an IBM keyboard as an 8, and a Northgate 102 keyboard as a 10."

—Burton L. Alperstein
Andrew Seybold's Outlook on Professional Computing

"The feel of the OmniKey/102 is as close as you're going to get to the IBM standard without having the real thing."

—Donald R. Wilmetts
PC Computing

"Run, scramble, hustle, bustle, get yourself onto the phone and order this keyboard. Don't settle for anything less. (Northgate's) new CT102 keyboard does everything right. I would not purchase any other keyboard. Period."

—Woody Lisswood
Microcomputers, Nov. 1988

"The OmniKey/102...is the keyboard I use!"

—John C. Dvorak
PC Magazine, Dec. 13, 1988

Although most computers come equipped with some sort of keyboard, you should replace it immediately with Northgate's OmniKey/102. It has the best feel, touch and layout of any keyboard we know, period."

—Sally & Daniel Grotte
The Robo Report, Feb. 1989

"...12 function keys on the left where God intended them...revolutionary and much needed...Better than any replacement keyboard...duplicates the responsiveness and tactile feedback of the original IBM keyboard...A viable alternative to IBM's own model...durable, well-designed, sensible and has just the right feel."

—Garry Ray

■ PC LAB NOTES

grams into high memory as you specify—until it runs out of high-memory space. If insufficient high memory is available to load a TSR, *LOADHI.COM* will issue an error message and simply load the program into normal DOS memory without further ado. If the error message bothers you, you can just eliminate that final annoying *LOADHI* entry.

Of course, before *LOADHI.COM* (or *LOADHI.SYS*) will work, you'll need to have the high memory available, so don't forget to enter the RAM parameter on the *DEVICE=QEMM.SYS* line in your *CONFIG.SYS* file. You'll also need to be sure that *LOADHI.COM* is located in the logged directory (usually the root directory) or in a directory specified by a previously defined *PATH* statement so that DOS can find it.

SELECT DRIVERS CAREFULLY

When you use a mouse with *DESQview* and you have your choice of mouse drivers to use, always use the Microsoft mouse driver. This driver has built-in features that help *DESQview* handle your computer's video system. Selecting this driver is especially important if you have an EGA display adapter board because some EGA registers cannot be read. Consequently *DESQview* can't figure out what's in these registers to display images properly when shifting screens. The Microsoft mouse driver tracks such changes, however, so *DESQview* can indirectly determine the proper settings of the various EGA registers. *Microsoft Word* particularly benefits from your using this driver.

FINAL STEPS Once you have your system set up to take best advantage of *DESQview*, you must make sure that you run the right version of the program. On the distribution disk, two variants of *DESQview* are included, *DV.EXE* and *XDV.EXE*. The former loads *DESQview* into normal DOS memory; the latter puts most of the *DESQview* code into the 80386-based computer's extended memory. Only a few 80386 computers are unable to use the *XDV* program, and by using the *XDV* version you'll free up an additional 140K of space for your DOS applications. You will be able to avoid confusion by copying only *XDV.EXE* to your hard disk and then re-

naming it to *DV.EXE*.

Microsoft recently announced a new driver, *HIMEM.SYS*, that allows *Windows/286*, Version 2.10, to take advantage of this same extended memory area. If you plan to run *Windows/286* under *DESQview 386*, make sure that *Windows/286* is configured *not* to use *HIMEM.SYS* and the memory area.

To configure *DESQview 386* and match it to your installed software, in most cases you'll want to use *DESQview's* own

■ *Windows/386* does not allow you as much flexibility as *DESQview*. The philosophy is that most users want to be bothered by as few details as possible.

automatic setup program. These procedures will search through all your disks and their directories for all the applications that *DESQview* knows how to work with and set up *DESQview* to match them. All of the programs that the installation procedure notes are fully compatible with *DESQview* and are generally set up optimally. With a few exceptions, you won't want to tinker with these factory settings.

After you've started using the program, however, you may want to do a little fine-tuning with *DESQview's* Advanced Options menu. For example, you can sometimes get substantially better floppy disk performance by changing the preset value of 2 in the "DOS Buffer for EMS" field to 0. On most 80386-based systems (the only exceptions I've found involve some networks or a SCSI hard disk drive), this change will give extra zip to floppy disk operations. The default *DESQview* setting buffers the data on its way to and from your floppy disk. While this guards against overwriting memory used in Direct Memory Access (DMA) operations, I've found

that *QEMM-386* itself manages memory and prevents possible DMA conflicts quite adequately, so the buffers aren't normally needed. Eliminating the buffers speeds up floppy-disk operations and will also save you a couple of kilobytes of RAM.

One default setting nearly everyone feels compelled to tinker with in the Advanced Options menu is the entry for "Task Processing Time." The settings here determine how many system clock ticks (each about 0.055 second long) are devoted in turn to the foreground and background programs. The *DESQview* defaults assign 9 ticks for foreground programs and 3 for background. While that's optimal for 8088-based systems, 80386 computers generally run more smoothly if you assign 4 ticks to foreground applications and 2 to those in the background.

When you add new programs to *DESQview's* repertoire by invoking its "Add a program" option, it's especially important to include the full pathname and filename, including the *.EXE* or *.COM* extension. Otherwise, *DESQview* will load a copy of *COMMAND.COM* every time it runs the program. That steals about 4K from the memory available to the program within its virtual machine. Simply by being absolutely specific about the way you indicate your programs, you can save kilobytes in every virtual machine.

SETTING UP WINDOWS/386 Unlike *DESQview 386*, customizing *Windows/386* requires little fiddling with your *CONFIG.SYS* file. One reason for this is that EMS simulation is built into *Windows/386's* code, so you don't need to load a special device driver to get EMS memory. Another is that *Windows/386* does not allow you to shoehorn drivers and TSR programs into high memory.

Thus, you'll normally want to leave your *CONFIG.SYS* file alone when moving up to *Windows/386*. The only exception is if you normally use a disk caching program to improve the performance of your hard disk. Eliminating any aftermarket disk cache (or one that came with your computer) and substituting instead the *SMARTDRIVE.SYS* software included with *Windows/386* will yield an important benefit. *SMARTDRIVE* was specifically designed to work cooperatively with Win-

Not just another power trip.

The IBM PS/2 Model 70 386 with Micro Channel.

A desktop system with 386 power, loaded with memory, racing through complex applications at up to 25 MHz, is where the Personal System/2* Model 70 386 *begins*.

What it offers you beyond its sheer power, is where it begins to make a difference.

	Model 70 386		
	A21	321	661
Available models	A21	321	661
Microprocessor	80386 25 MHz, 640k memory cache (30ns)	80386 20 MHz	80386 16 MHz
Optional Math Co-Processor	80387 25 MHz	80387 20 MHz	80387 16 MHz
Memory (RAM)	Standard Maximum on system board	2Mb (80ns) (64k) 16Mb	2Mb (80ns) (64k) 16Mb
Memory (RAM)	Standard Maximum on system board	2Mb (80ns) (64k) 16Mb	2Mb (80ns) (64k) 16Mb
Disks and storage	144Mb 3.5-inch standard (2 maximum).		
Fixed disk storage	Optional 20-meg, 33Mb (20-meg, 33Mb, 27-meg).		
Built-in features	Video Graphics Array (VGA) and display port, diskette controller, serial, parallel, keyboard and pointing device ports, clock/calendar.		
System expansion	Three open slots (two 32-bit, one 16-bit).		
Operating systems	DOS 3.3, 4.0, IBM OS/2, AIX™ PS/2		

The Model 70 386 features Micro Channel,* a 32-bit bus created to take full advantage of 386 technology. Micro Channel is designed for multitasking and multiprocessing. It allows the PS/2* to operate several intelligent processors and subsystems simultaneously. So you can do several jobs at once and still get truly balanced performance.

With the Model 70 386, complex spreadsheets go faster than ever. So do sophisticated graphics. Even networking is no sweat. And Micro Channel ensures a platform for future applications, such as imaging and advanced communications.

By combining Very Large-Scale Integration, advanced Surface Mount Technology and built-in features, PS/2s deliver state-of-the-art reliability and design sophistication. The Model 70 386 runs most current DOS applications and is ideal for the new OS/2* applications.

Here, then, is a system that recognizes your need for power today, and helps protect your investment for years into the future. All at a price you'd expect to pay for 386 machines with "yesterday's" bus architecture.

For a demonstration of the PS/2 Model 70 386, see your nearest IBM Authorized Dealer or IBM marketing representative. Call 1 800 IBM-2468, ext. 119 for a dealer near you.

It'll be well worth the trip.

■ PC LAB NOTES

your application doesn't need that much RAM. The .PIF file lets you set up the amount of memory *Windows/386* will allocate to the program.

The display mode you choose for your applications in their .PIF files can also have a dramatic effect on memory usage. Specifically, if you indicate that you want to make graphic screen exchanges and you're using an EGA or VGA display, *Windows/386* will reserve a full 256K of RAM as a display buffer in the virtual machine associated with that application. That's a huge waste if you're only going to use the text mode of an application; for instance, if you never use the graphics portion of *Lotus 1-2-3*. By choosing text-only for screen exchanges, you'll save nearly all of that RAM for use by other applications.

At least to a limited extent, .PIF files also let you modify the way *Windows/386* divides its time among applications. Normally, *Windows/386* allocates two-thirds of its time to the foreground applications and one-third to all the applications executing in the background. If you assign a program the exclusive attribute in its .PIF file, that application will take all your system's time and shut down background applications while it's in the foreground window. And when it is shifted to a background window, the exclusive application will stop executing.

There are other options you may want to set to your personal specifications that are controlled by the WIN.INI configuration file. This file is normally stored in the same directory as *Windows/386*. You can edit WIN.INI with any text editor that creates ASCII files, including the program's own Notebook editor.

Settings in WIN.INI determine to some extent how *Windows/386* deals with expanded memory. Normally, *Windows/386* runs in EMS memory and, by default, reserves a block of 640K for its own use. You can alter both of these arrangements to yield more memory for DOS applications.

If you don't plan on running any specific *Windows/386* applications and want to use the environment simply to switch between your DOS programs, you can trim the memory assigned to *Windows/386* down to 384K (or so) with the window-

menseize option in WIN.INI. It's listed under the subheading [win386].

To prevent *Windows/386* from using EMS memory, just start the program using its undocumented command-line option /N. The option follows the WIN386 command and precedes the name of any application that you want to start running under

■ Normally *Windows/386* runs in EMS memory and reserves a block of 640K for its own use. You can alter these arrangements to yield more memory for DOS applications.

Windows/386. For example, to start *Windows/386* outside EMS and running the *Ami* word processor, your command line would be

```
WIN386 /N AMI
```

The /N option is also handy when you are troubleshooting *Windows/386*. If your system locks up the first time you try to load the program—particularly when you have a network adapter in your computer—try loading *Windows/386* with the /N option. If it then works, you've discovered a conflict between the EMS drivers inside *Windows/386* and other software in your system. Not only have you identified the problem, but also you can use *Windows/386* in this mode until you get a fix. (Some network suppliers have bug-fixes that correct such problems. Check with your vendor or with the technical support people for your network.)

In setting up your WIN.INI file, you should be aware that some peripherals use memory areas that you don't know about and that *Windows/386* may not discover for itself. IBM Token-Ring adapters and the 8514/A display adapter, for example, have such reserved memory areas. If you have either of these devices in your sys-

tem, you can prevent conflicts—which might confuse displays or crash your system—simply by including the line

```
emmxclude=B0000-B4FFF
```

in the [win386] section of WIN.INI.

Another modification you might want to make if your computer is connected to a network is to defeat the print spooler built into *Windows/386*. The setting of the spooler is stored in WIN.INI under the heading [386] and is On by default. The only time this choice is not desirable is when your network has its own print spooler. You don't normally need more than one spooler in a system, so just change this option to Off.

Another option in WIN.INI allows you to print anything you want to a file instead of to your printer. For instance, you may need a PostScript file to send to a type supplier or to use with one of the new PostScript interpreters that work with non-PostScript printers. To give yourself this option, simply include a filename with the extension .PRN followed by an equals sign, under the [ports] heading of WIN.INI. That filename will thereafter appear as one of the printer choices shown in the *Windows/386* Connections dialog box.

WIN.INI also allows you to specify a default set of applications to load each time you start *Windows/386*. To have *Windows/386* come up with an application running in its foreground window, specify either the name of the program or the name of its .PIF file after the run= option under the [386] heading in WIN.INI. Using the load= option, you can specify as many programs as you like (or will fit into the memory of your system) to load into the background of *Windows/386*. Although neither run= nor load= lets you specify any command-line options (such as files to immediately load for editing when the window opens), you can indicate these in the .PIF file assigned to each program.

The *Windows/386* environment provides you with a "panic button" to press when an application crashes. Hit Alt-Spacebar, and you'll get the system menu. Choose the bottom selection, Settings, and you'll get another dialog box, where you'll find a special option labeled "terminate." Choosing that will close the ill-behaving active window and, in most cases, will re-

trieve your machine-gone-awry. After invoking the terminate option, you'll still have to pick up the pieces of the broken window (CHKDSK /F will collect any orphan clusters that may be left scattered across your disk), but you probably won't have to reboot your computer and lose your other ongoing work.

If you plan on using your mouse only with the *Windows/386* menu control system or with applications written for it, you don't have to load your mouse driver at all. Support for most mice is built into *Windows/386*. You merely need to specify the type of mouse that you have during the *Windows/386* setup procedure.

On the other hand, if you plan on using a mouse with standard DOS applications—like *Microsoft Word* or a non-*Windows/386* drawing or CAD program—you'll still have to load your mouse driver when you use *Windows/386*. Note, however, that if only one or two of the many applications that you want to run use a mouse, you should load the mouse driver within the virtual machine of the program that requires mouse support. That way the mouse driver won't steal memory space from applications that can't use it.

This strategy applies only when your mouse driver is available in both .SYS and .COM file forms, as is Microsoft's own mouse driver. If your mouse driver is available only in .SYS form, you'll have to load it through your system's CON-FIG.SYS file, in which case it will be available to all applications that run on your computer.

WHEN TO USE BOTH The array of choices for using these two 386 environments can be bewildering. While they open up many new possibilities, you'll find there are limits to this new power.

For instance, you might want to multitask *Windows*-specific applications and install drivers in high memory. If you install *QEMM-386* to use its RAM facility, however, *Windows/386* won't run, since only one DOS program can manage protected-mode programs. The solution in this case may be to run *Windows/286* (the non-386 version) sessions under *DESQview 386*. You won't be able to use the *Windows/386* clipboard to transfer data between applications this way, but you'll enjoy plenty of

memory for each individual *Windows/386* application. If you run multiple *Windows*-specific applications under *Windows/386*, however, the system starts swapping code to disk when the 640K limit is reached.

Use the above as guidelines, but don't get frustrated when you find incompatible programs. If you're eager to multitask without OS/2, you'll have to experiment. [E]

14" Graphics Monitor,
OmniKey and MS-DOS 4.01

Price as of March 15, 1989

Look At All You Get!

Features Unmatched Anywhere...

- One or two Mbyte of RAM
- 65Mbyte 28MS hard drive
- One 1.2Mbyte and 1.44Mbyte floppy drive
- Two serial, one parallel port
- Full-size desktop case
- Famed OmniKey/102 keyboard (pick of the pros)
- 14" MonoGraphics flat screen amber or white monitor
- Performance-enhancing software
- MS-DOS 4.01/GWBasic (full manuals)
- One-year warranty with our unique overnight parts replacement policy* (freight paid by Northgate)

For the second consecutive year, the readers of *Computer Shopper*, the world's largest computer magazine, voted Northgate Computers "Best Buy" of all products advertised in the magazine and "Best Buy" for its 80386 computer system.

NEW! Northgate "Big N" Revolving Credit Card.

No money down • 3 years+ to pay
• Low monthly payments
• Unlimited funds available!
Works just like your VISA or MasterCard, Or...

Lease it with Northgate...

Northgate has a flexible lease plan suited to your needs. With up to five years terms, if cash conservation is your concern, ask about leasing your system with Northgate. PHONE NORTHGATE NOW...

NORTHGATE
PROUDLY ANNOUNCES

Sorbus

is now included at no extra cost
to the owner—with every
NORTHGATE COMPUTER SYSTEM

The decision is up to YOU...

- **Superb 80286/16MHz with 2MB of RAM**
- **Blazing Fast New 286/20 System**
- **True 32-Bit 80386/16 (Not an SX)**

All three are complete systems configured alike at the same astonishing landmark price!

NORTHGATE'S 286/20 handles even large databases faster than other systems *Infoworld* (11/14/88) tested, including Dell. Plus it has a full size case and 1MB usable RAM. Doesn't waste 384K of RAM as many others do with shadowing methods.

OUR 286/16, with speed to spare, comes with a second Megabyte of RAM at no extra cost. Even with extra RAM it's hundreds below competition offers with the same features.

THE 386/16 blows right past 16-bit SX systems to true 32-bit 386 Computing Power. Imagine, a power computer with 68 MB of FAST hard drive storage at this incredibly low price! (And compare prices with Compaq's SX.)

Which one is best for you? Either way you'll get Northgate's industry-leading performance, quality,

workmanship and warranty. As with all Northgate systems, these three feature 800,000 Bytes Per Second throughput—up to three times faster than Dell, IBM, Compaq.

All systems give you 1MB RAM expandable to 16MB; Microscience's lightning quick 28MS hard disk with 68MB of storage and a 16-bit high speed RLL dual drive controller.

Add to these a host of extras only Northgate includes—BOTH 1.2 and 1.44 floppy drives; our exclusive OmniKey/102 keyboard; high resolution 14" flatscreen amber or white monitor and MS-DOS 4.01.

PLUS, Northgate makes available a wide range of options. We'll build your Northgate *Your Way* and you will be amazed at our "No Baloney" pricing.

If One of These is Not For You... Ask about Northgate's 286/12 that was awarded PC Magazine's "Editor's Choice" (1/31/89). Or Northgate's 386/20, top of the line!

It Will Forever Change The Way You View Your Existing Software And Data!

Here's What The Critics Are Saying About ViewLink...

"The most significant new product of the late DOS era ... a visionary solution - a beacon of good sense and productivity."

Jeff Angus, INFOWORLD
-Feb. 6, '89

"In a computer market that's overflowing with 'me-too' products, ViewLink is potentially one of the most important products to appear in the past year."

BYTEWEEK -Jan. 30, '89

"ViewLink provides a welcome new way of managing applications."

Jimmy Guterman, PC WEEK -Jan. 30, '89

"What a great idea... ViewLink is an idea that's long overdue for any DOS computer."

Don Crabb, CHICAGO-SUN TIMES -Feb. 19, '89

"ViewLink performs the type of service users should expect of their operating system..."

Jeffrey Tarter, SOFT*LETTER

Now that you've heard what the critics are saying about ViewLink ... imagine how much more efficiently you could work if all of your files were organized according to the way you use them. And not limited by their DOS directory or subdirectory structures.

Think of how much quicker you could get things done if you could load both the file you want to work with and its program at the same time—with a single keystroke.

Visualize how much more effective you could be if you

could search an entire hard disk for related files—and group them together automatically.

That's the powerful idea behind ViewLink. A new easy-to-use method in connecting you with your software and data. It works with over 50 of today's most popular software applications. And it's only **\$149.95**.

From Traveling Software, the people who brought you LapLink and DeskLink.

Available at your local computer store today.

For more information about ViewLink, call **1-800-343-8080** or in Washington state **206-483-8088**.

PRINTER CONTROL: THE EASY WAY

This easier, more flexible upgrade of our popular SETUP utility lets you tell your printer exactly how to print a file—and you never have to leave your application.

Printing a Lotus 1-2-3 spreadsheet sideways with compressed type once took a special software program for a dot matrix printer. Now a laser printer can do it by itself—provided you can find a way to transmit an escape sequence such as

```
<ESC>"*11o2e5.647c66F"<ESC>"*k2S"
```

before sending the file to the printer.

In the June 24, 1986, issue of *PC Magazine*, SETUP.COM gave users of the popular Epson RX/FX series dot matrix printers a way to invoke many of its cryptic control codes from within an application. However, modifying SETUP to send other escape sequences required some familiarity with either a macro assembler or with DEBUG.COM.

SETUP2 is a highly customizable version of SETUP that reflects the need to keep up with advancing hardware and to grow as your printing needs become more sophisticated. It lets you create your own printer menus and control code sequences with ease, using only a standard ASCII text editor or word processor. Just as easily, you can modify those menus when you change printers or decide to squeeze more out of your old one. While the original SETUP was limited to one printer menu with ten configuration options, SETUP2 permits as many as memory will hold. Should you need to send a one-time escape sequence you didn't build into your default printer menu, SETUP2 lets you key in text and control codes on-screen and output them directly to your printer.

As always, the easiest way to get a copy

of SETUP.COM is to download it directly from PC MagNet, as explained in the accompanying sidebar "SETUP2 by Modem." The alternative is to create the .COM file either from the SETUP2.ASM source code or from SETUP2.BAS, both of which are listed here and are also available via PC MagNet. SETUP2.BAS will automatically create SETUP2.COM when you run it once in BASIC. To create SETUP2.COM from its source code, you must use a macro assembler (IBM or Microsoft, Version 2 or later) and the commands:

```
MASM SETUP2;
LINK SETUP2;
EXE2BIN SETUP2 SETUP2.COM
```

Then delete the .OBJ and .EXE files that were created en route.

USING SETUP2 Like its progenitor, the SETUP2 program is a RAM-resident utility that sits quietly in the background and waits for you to press the keys that pop it

up. Its complete syntax is

```
SETUP2 [d:][path][filename] |
[/C codes] [/U]
```

where *filename* is the name of a Printer Make File (I'll simply call this a PMF file hereafter) that contains your printer menu and control codes, as discussed below. Once it is loaded—normally through your AUTOEXEC.BAT file—you can uninstall SETUP from memory by invoking it with the /U option, provided no subsequently loaded TSRs stand in the way. If you simply want to send a string of text or control codes from the command line without making SETUP2 RAM-resident, the /C codes option will let you do so. This feature is particularly useful when using SETUP2 in batch files.

You can also use the /C option simply to take SETUP2 for a quick test drive. At the DOS command prompt enter the first line below if you have an Epson-compatible dot matrix printer, or enter the second line if you have a Hewlett-Packard LaserJet or compatible:

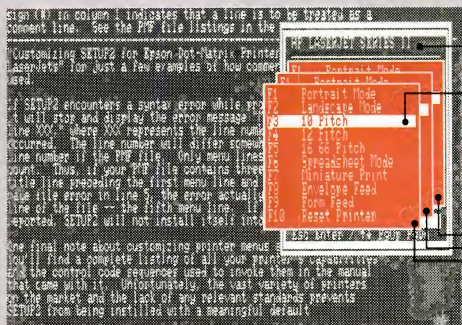

```
SETUP2 /C 15,"Printer Test",13,10
SETUP2 /C 27,"*k2S","Printer Test",
13,10,27,"*10H"
```

Your printer should print the text "Printer Test" in compressed type. The /C command line switch instructs SETUP2 to transmit the codes and text that follow to the printer after converting any numbers typed outside quotation marks into their binary equivalents. In the sample line above, the printer is first set to compressed mode, then text and a terminating carriage return/line feed pair are transmitted. (In the case of the LaserJet, a page eject command

■ **SETUP2 lets you create your own printer menus and control code sequences with ease, using only a standard ASCII text editor.**

■ UTILITIES

PC MAGAZINE Defining Printer Menus and Control Code Sequences with PMF Files

The menu window title—the first line in the PMF file.

The menu text and corresponding control code sequences are processed and assigned to a function key in the menu window according to their order in the PMF file.

Any number of menu lines, and therefore page numbers, may be used as long as the PMF file is less than 64K. (Note that the control codes are not displayed.)

Page 3
Page 2
Page 1

Figure 1: This illustrates the general format of a SETUP2 Printer Make File (PMF). The first ten lines of the PMF file will appear on page 1, the second ten on page 2, and so on, until every line contained in the PMF file is displayed within the menu window. Note that the menu text and control code fields on a given line must be separated by a semicolon (see Figure B in the sidebar "Customizing SETUP2 for Epson Dot Matrix Printers and HP LaserJets"). In addition, comment lines may be inserted anywhere in the file for documentation purposes. Such lines are identified by entering a pound sign (#) in column 1. Everything on a line after the pound sign is ignored by SETUP2's processing routines.

is also sent.) If your printer is off-line, powered off, or otherwise not ready to receive data, SETUP2 will respond with the message "Printer not ready."

SETUP2 interprets either double or single quotes to mean that the text they enclose is to be treated literally. Numeric entries may be separated by commas, spaces, or tabs and are not case-sensitive. Numbers are normally entered in decimal, but they may alternatively be entered in hexadecimal format by preceding them with an x or 0x (the C-language style). The Epson control code sequence shown above, for example, could have been entered as either of the following lines:

```
SETUP2 /C 0x0F,"Printer Test",0x0D,0x0A
SETUP2 /C xf "Printer Test" xd xa
```

If you make a mistake typing a code string, SETUP2 will notify you with the error

message "Invalid code string."

When you run SETUP2 without the /C option, it becomes RAM-resident. The default hotkey is the Ctrl-Right Shift key combination, which pops up SETUP2's printer menu window. Pressing the Esc key closes the window and returns you to the program you temporarily interrupted.

If SETUP2 is installed without providing it with a PMF filename, Ctrl-Right Shift will bring up an empty window, of course, but even from this you can see how the menu will work. At the top of the window is a blank line that will hold the name of your printer (or any other text you'd like to enter there, such as your name) once you've configured the program. Below it are ten blank lines with function-key labels F1 through F10 on the left. Below that is a highlighted input bar.

If you now press the Slash key (/), a

cursor will appear in the input bar. Here you can enter text and control codes to send output directly to the printer just as you did previously from the command line, using the /C option. You can enter up to 100 characters in the input bar. As you do, the text will scroll to the left. The Enter key ends text input and transmits the codes; the Esc key aborts the input process without sending anything to the printer. Again, if the codes you type contain errors, SETUP2 will beep, display the message "Error: Invalid entry" on the line beneath the input bar, and give you a chance to go back and edit the entry. If the codes are valid but the printer isn't ready, SETUP2 responds in a similar manner with the message "Error: Printer not ready." And if the transmission succeeds, the cursor will disappear and you'll be placed back in the menu area.

CUSTOMIZED MENUS The PMF file is the mechanism SETUP2 uses for custom configuration of its menus and control codes. Figure 1 shows the structure of the PMF file format graphically; "Customizing SETUP2 for Epson Dot Matrix Printers and HP LaserJets" provides sample PMF listings for Epson-standard dot matrix printers and for HP LaserJets.

A PMF file is nothing more than an ASCII listing of the menus you want to see when you pop up the window, together with the control codes that correspond to them. PMF files can be created with any ASCII program editor or text editor or any word processor that will save files in generic ASCII format. In the absence of anything better, EDLIN will suffice. Better

yet, try TED, the tiny text editor published in this column in the November 15, 1988, issue. If you use *WordPerfect* as an editor, on the other hand, *don't* save a PMF file as you would a normal word processing file. Instead, use the Text In/Out menu (accessed with Ctrl-F5) to write it out as a DOS text file.

The first line in a PMF file will appear

CUSTOMIZING SETUP2 FOR EPSON DOT MATRIX PRINTERS AND HP LASERJETS

A simple ASCII text editor is all it takes to configure SETUP2. Two sample PMF files—one for Epson RX and FX series dot matrix printers, the other for HP LaserJet printers—are given in Figures A and B to start you off.

Note the use of comment lines to enhance readability and to separate pages of menu text. The text of each menu line ends with a semicolon. For appearance sake, the control codes that follow are left-aligned with tabs and spaces. SETUP2 ignores the space between semicolons and the start of the control codes.

The first sample PMF file provides two full pages of menus for printers with

Epson-compatible command sets. If you have an FX model rather than an RX, you might want to add an NLQ/draft option to switch easily from draft mode to near-letter-quality mode and back. Most of the entries in this file will work with Epson MX series and IBM dot matrix printers as well.

The second PMF file is designed for Hewlett-Packard LaserJet printers and compatibles. As this example illustrates, you don't have to make the number of menu entries an exact multiple of 10; SETUP2 simply pads unused lines on the final page with blanks.

The control code combinations shown

here represent only a few of the many possibilities provided by HP's Printer Command Language. The Spreadsheet menu selection on the second page illustrates how a number of unrelated codes can be combined for a single purpose: in this case, to prepare a LaserJet to print spreadsheet data in compressed landscape format. The remaining menu entries on the second page control typeface selection. If desired, you could combine control codes for typeface, stroke weight, pitch, spacing, and other elements that factor into font selection to build a series of complete font selection menus.—Jeff Prossie

Figure B: Your LaserJet has a more complete list of the codes provided by Hewlett-Packard's Programming Control Language.

“We need Accounting Software
we’ll never outgrow.”

“You need Macola. Here’s why.”

Choosing the right accounting software can be a complicated process. And due to the time and money invested, this decision should be made only once—regardless of how much your business grows.

There are plenty of reasons why you’ll never outgrow Macola Accounting Software. Here’s just five.

Reason 1: Flexible and Powerful. In the words of PC Magazine, Macola Accounting Software “is at the top of its class... a flexible, powerful system that is well suited to many different businesses.”

Reason 2: Fourteen Integrated Packages. It’s modular, so you can add more computing power as your needs grow, from simple accounting to full scale accountability.

Accounting General Ledger—
Accounts Receivable—Accounts Payable—Payroll—Assets/Depreciation

Distribution Inventory Management—Customer Order Processing—Purchase Order and Receiving

Manufacturing Bill of Material Processor—Material Requirements Planning—Master Scheduling—Shop Floor Control—Job Costing—Standard Product Routing

That’s not all. There’s a Report Writer that allows customized reporting and can easily transport data files to popular spread sheet, word processing and database programs.

Reason 3: The best multi-user LAN compatibility. No other software can match

Macola’s 15 years of maturity in mini and micro Local Area Network (LAN) environments. Today, Macola is the most advanced accounting software for LANs. That’s why Macola earned LAN Magazine’s “Product of the Year” honor ... for the second year in a row.

Reason 4: Unparalleled Speed and Data Integrity. Macola Software is the only high-end accounting software written in Micro Focus COBOL... for maximum speed and data integrity. Source code is available. IBM has licensed Micro Focus COBOL

as its SAA standard for the new PS/2 and OS/2.

Reason 5: Comprehensive Support. Toll-free 800-line support is available from Macola. Or, utilize Macola’s nationwide network of authorized resellers for local training, customization and hands-on support.

These are just five reasons why you’ll never outgrow Macola Accounting Software. For more reasons, more detailed information, “live” demonstration packages and an authorized reseller in your area, call today:

SETUP2.ASM: The assembly language source code for the SETUP2.COM utility that lets you control your printer's output from within an application program. SETUP2 may be used either from the command line or as a RAM-resident program.

[illegible]

[illegible][illegible]

(SETUP2.ASM continues)

Virtual Memory for DOS!

MicroWay is your best source for the software and hardware you need to get true 32 bit performance from your 386. These include 32-bit tools, such as NDP Fortran and C, and the 32-bit applications that were developed with them (see last paragraph). These products run in protected modes under Unix, Xenix, or Phar Lap extended MS-DOS.

Starting with release 1.4VM, NDP Fortran and C not only access 4 gigabytes of memory, but run with Phar Lap's new VMM extension which provides 386 protected mode virtual memory. Now you can run a program with a 30 MB array on a 2 MB system simply by having 30 MB of free space on your hard disk.

MicroWay also offers transputer based parallel processing boards and languages that run in an XT, AT, or 386. Each of the T800 RISC processors on these boards packs the power

Dr. Robert Aswell, leading defense scientist, calculates that NDP Fortran-386 is saving him \$12,000 per month in rentals of VAX hardware and software while doubling his productivity!

Fred Ziegler of AspenTech in Cambridge, Mass. reports, "I ported 900,000 lines of Fortran source in two weeks without a single problem!" AspenTech's Chemical Modeling System is in use on mainframes worldwide and is probably the largest application to ever run on an Intel processor.

Dr. Jerry Ginsberg of Georgia Tech reports, "My problems run a factor of six faster using NDP Fortran-386 on an mW1167 equipped 386/20 than they do on my MicroVAX II."

of a 20 MHz 386/1167. Our best selling board, the Quadrunner2™, has four T800s and boasts 40 MIPS/6 megaflops of processor throughput.

MicroWay manufactures Weitek 1167 and 3167 coprocessor cards that run with the 80386. Both cards include an 80387 socket. The 1167 is 2 to 4 times faster than the 80387. The 3167 runs 30% faster than the 1167 in double precision. The key to achieving this speed increase is our NDP Fortran or C and the new 32-bit applications that offer Weitek support. Either processor provides a dramatic increase in throughput for graphics intensive applications. These include VensCad and Hoops 3D graphics, ANVIL 5000 CAD/CAM, SRAC and Swanson Analysis finite element packages, Mathematica and a host of other packages that were recently ported to the 386 using our NDP Fortran and NDP C. Please call (508) 746-7341 for more information.

32-Bit Compilers and Tools

NDP Fortran-386™ and NDP C-386™ Compilers generate globally optimized, mainframe quality code. Both run in 386 protected mode under Unix, Xenix or Phar Lap extended MS-DOS. The memory model employed uses 2 segments, each of which can be up to 4 gigabytes. They generate code for the 80287, 80387, mW3167 or mW1167. Both include high speed EGA graphics extensions written in C that perform BASIC-like screen operations.

- NDP Fortran-386™ Full implementation of FORTRAN-77 with Barklay 4.2 and Fortran-66 extensions. \$595
- NDP Fortran-386/VM \$695
- NDP Fortran-386/UNIX \$795
- NDP C-386™ Full implementation of AT&T's PCC with MS and ANSi extensions. \$595
- NDP C-386/VM \$695
- NDP C-386/UNIX \$795

Phar Lap 386/VMM extensions are supported by the VM releases of NDP Fortran and C. Virtual memory is used automatically by the compilers and the code they generate. This makes it possible to compile and run programs as large as the free space on your hard disk. Phar Lap Virtual Memory Manager ... \$295
Phar Lap Development Tools ... \$495

NDP Windows™ — NDP Windows includes 80 functions that let you create, store, and recall menus and windows. It works with NDP C-386 and drives all the popular graphics adapters. Library: \$125, C Source: \$250

NDP Plot™ — Calcomp compatible plot package that is callable from NDP Fortran. It includes drivers for popular plotters and printers. Works with CGA, MDA, EGA and VGA. \$325

NDP/FFT™ — Includes 40 fast running, hand coded algorithms for single and double dimensional FFTs which take advantage of the 32-bit addressing of the 386 or your hard disk. Callable from NDP Fortran with mW1167 and 80387 support. \$250
367FFT for 16-bit compilers \$250

NDP to HALO '88 Graphics Interface — This module enables you to call graphics routines in HALO '88 from NDP Fortran or C. \$100

MicroWay® 80386 Support (508) 746-7341

Parallel Processing

Videoport™

The highest performance graphics card on the market. Uses a T800 and T134010 in conjunction with a 130 MHz BrookTree DAC. The board comes with one meg of system RAM, one meg of video RAM and a library of graphics primitives. It runs standalone or in conjunction with a transputer network and drives 32 and 64 KHz analog monitors. \$4995

Monoputer2™

The world's most popular PC transputer development product now extends the memory available for developing transputer applications from 2 to 16 megabytes. The board features a DMA bus interface for fast I/O.

Monoputer2 with T414 (0 MB) \$995
Monoputer2 with T800 (0 MB) \$1495

Quadrunner2™

This board for the AT or 386 can be purchased with 2, 3 or 4 transputers and 1 or 4 megabytes of memory per transputer. Two or more Quadrunners can be linked together to build networks of up to 100 or more transputers providing mainframe power. from \$3495

Transputer Compilers and Applications

These Parallel languages are designed for use with Monoputer2 and Quadrunner2.

NORTHGATE PROUDLY ANNOUNCES...

Sorbus®

A Bell Atlantic™ Company

NATIONWIDE INDEPENDENT COMPUTER SERVICE

*is now included at no extra cost to the owner
with every Northgate Computer System*

SORBUS services computers and peripherals—Micros to Mainframes, Coast-to-Coast. Expert service by computer specialists, in-depth trained on *your* Northgate system to get you up and running promptly!

SORBUS, a Bell-Atlantic Company, provides maintenance on more than 400 brands of computer equipment

including IBM, Compaq, DEC, Hewlett-Packard, Princeton, Zenith...virtually all major systems and peripherals.

NORTHGATE is delighted to make this announcement and proud of our association with Sorbus as a further indication of our dedication to top quality support for our most important resource—You, our customers.

Phone Northgate Now for full details on the most complete lineup of high performance, quality systems with Service Second to None

(SETUP2.ASM continues)

If Everyone Worked Alike, We Would Only Have To Make One Computer.

But they don't. So we created a broad line of PC compatible computers to meet your individual computing needs while working within your budget.

Whether you are with a Fortune 1000 corporation, manage a small business or work at home, there's a Mitsubishi computer to fit your requirements in size, speed and power.

The sleek mp286L portable is easy to use at home or carry from home to the office. The MP286 is a small footprint desktop PC. For expandability, it's the 32-bit MP386 or the new 16 Mbit MP386s—the perfect balance of size and power.

For greater convenience and performance flexibility, you can integrate your PC with a wide choice of Mitsubishi peripherals including color monitors, disk drives, scanners and color thermal transfer printers.

See our full line at your authorized Mitsubishi dealer who is ready to listen and recommend just the right Mitsubishi system and peripherals. Or contact the Mitsubishi Information Center by calling in the U.S. and Canada 1-800-556-1234, ext 25 (in California, 1-800-441-2345, ext. 25).

With over a decade of experience, Mitsubishi has delivered over a half million personal computers earning a reputation for unparalleled quality and dependability.

Mitsubishi Electronics. Personal computers and personal service.

SETUP2 BY MODEM

The programs published in *PC Magazine* are available by modem from PC MagNet, an on-line information service administered by CompuServe.

DOWNLOADING A UTILITY

Here's the fastest way to get a *PC Magazine* utility or program file from PC MagNet:

1. Log on to PC MagNet.
2. Enter GO UTILITIES or choose (3) PC Magazine Utilities from the top menu.
3. Choose (4) Direct Utility Download.
4. Enter the filename (or just the first four letters).
5. Select the file from those presented.
6. Read the description of the file.
7. Answer (Y) to Do you wish to download this file?
8. Press Enter to see transfer protocols.
9. Choose a protocol (we recommend you use XMODEM or CompuServe Quick-B).
10. Download the file.

ONE CALL GETS YOU STARTED!

Sign up on-line at no additional charge.

1. To subscribe, set your modem to: 300 or 1,200 bps, 7 data bits, even parity, 1 stop bit, and full duplex. Call one of the numbers listed:

Anaheim, CA	(714) 520-9724

(continues)

Jeff Prosize

Purpose:

Sends menu-selected or typed control codes to a printer from within an application or from the DOS prompt.

Format:

SETUP2 [d:][path][filename] | [/C codes] | [/U]

Remarks:

Entered without the /C option, SETUP2 becomes a RAM-resident utility with a pop-up menu of user-configured printer control sequences specified in *filename*. The default hotkey is Ctrl-Right Shift. Esc closes the menu window and returns to any already running application. Entering SETUP2 with the /U option uninstalls the utility if no subsequent TSR program has been loaded.

Any ASCII text editor or word processor can be used to create *filename*, which contains the desired printer commands. This file may be up to 64K in overall size and may contain any number of lines, each of which must be ended by pressing Enter. The first line identifies the printer or company (hit Enter alone to leave it blank) and may be up to 26 characters long. Subsequent lines consist of up to 20 characters of identifying ASCII text, followed by a semicolon, followed by up to 255 bytes containing the printer control sequence. For example, the first four lines of a *filename* for an HP LaserJet might be entered thus:

H-P LASERJET

Spreadsheet: 27,'&1102e5.647c66f',27,'&k25''

Reset Printer: 27,'&'

Form Feed: 12

ASCII 27 is the (decimal) escape character; it could alternatively be entered in hexadecimal notation as x1B or 0x1B, following the C-language style. Numeric entries may be separated by commas (as shown) or by spaces or tabs. Literal ASCII text must be enclosed either within double quotes (as shown) or single quotes. White space to the right of the semicolon is ignored, and any line in *filename* beginning with a pound sign (#) is treated as a comment line and will not appear in the SETUP2 window.

In the example just cited, when the SETUP2 menu is popped up with Ctrl-Right Shift, the words "Spreadsheet," "Reset Printer," and "Form Feed" will appear next to lines identified as F1, F2, and F3. The associated printer control codes do not appear in the on-screen menu but are sent to the printer either by pressing the indicated function key or by moving the menu highlight bar to the appropriate line with the Up- and Down-Arrow keys and pressing Enter. The PgDn and PgUp keys bring lines in *filename* beyond the first "page" (ten lines) into the menu window.

■ UTILITIES

SETUP2 Command

Jeff Prosize

May 30, 1989 (Utilities)

Below F10 in the SETUP2 menu is a blank line that may be used to send printer control sequences not contained in *filename*. This line is accessed by pressing the Slash key (/), typing in the actual control codes (using the format conventions previously discussed), and pressing Enter. In this case, the actual printer codes are shown on the screen; the entry line scrolls horizontally to accommodate sequences of more than 100 characters.

Entering SETUP2 with the /C option enables sending printer control codes from the DOS command line without making the utility RAM-resident. This is useful both for testing and for batch file operations. The codes are again entered with the numeric and quote-mark conventions previously indicated. Note that each line must end with an ASCII 13,10 (carriage return/line feed) sequence.

By default, SETUP2 uses LPT1. Users familiar with DEBUG.COM can change the entry at offset 018A (normally 0) to 1 (for LPT2) or to 2 (for LPT3). Similarly, the default Ctrl-Right Shift hotkey can be changed to another Shift key combination by changing the entry at offset 01B3 (normally 5). A hex value of C in this location would change the hotkey to Ctrl-Alt, for example. A complete table of shift mask values is printed in the original article.

Seattle, WA (206) 241-9111
St. Louis, MO (314) 241-3102
Washington, DC (202) 388-4280

(Note: After you have become a member, you can locate a local telephone access number, or 2,400-bps service, by typing GO PHONES at the ! prompt.)

2. When you receive a Connect or Carrier Detected message, enter Ctrl-C.
3. At the HOST NAME prompt, enter C1S.
4. At the USER ID prompt, enter 177000,5000.
5. At the PASSWORD prompt, enter PC*MAGNET.
6. At the Enter agreement number prompt, enter Z10D8910.
7. Register your name and enter your VISA, MasterCard, or American Express account number.
8. Your personal User ID number and Password will be displayed at the end of the subscription process. Please record them in a secure place.
9. A new password will arrive in the mail within 10 days to confirm your subscription.

There are no connect charges for PC MagNet during the subscription process.

PC MagNet costs \$12.50 an hour for 1,200/2,400-bps service and \$6 for 300-bps, via MasterCard, VISA, or American Express. There is no additional charge for downloading source code or compiled programs from PC MagNet. These programs can be copied but are copyrighted and are made available only for noncommercial use. You may make copies for others as long as no charge is involved, but making copies for any commercial purpose is strictly prohibited.

Photocopy this page. Trim and hole-punch the copy and add it to your DOS manual.

Why Pay More?

"You can have the power and performance of the IBM PC/AT for half the price."

Over 400,000 SATISFIED CUSTOMERS • MAJOR CREDIT CARDS ACCEPTED

POLICY: Add 3% (minimum \$7.00) shipping and handling. Larger shipments may require additional charges. Personal and company checks require 3 weeks to clear. For faster delivery, use your credit card or send cashiers check or bank money order. Credit cards are not charged until we ship. Pennsylvania and Maryland residents add appropriate sales tax. All prices are U.S.A. prices and are subject to change. All items are subject to availability. Defective software will be replaced with the same item only. Hardware will be replaced or repaired at our discretion within the terms and limits of the manufacturer's warranty. We cannot guarantee compatibility. All sales are final and returned shipments are subject to a restocking fee. We are not responsible for typographic or photographic errors.

GIVE US HALF AN HOUR AND \$399 AND WE'LL GUARANTEE YOU A FULL FEATURED NETWORK.

THAT'S ALL it takes to turn two IBM or compatible PCs into a true network. Half an hour or less to install MainLan and \$399 for MainLan's complete starter pack.

And if you want to add 1, 2 or more, it's just a matter of \$199 for each additional computer.

An inexpensive way to turn your fragmented, unsociable collection of computers into a fully functioning network, sharing printers, making files, data and hard disks available to anyone who needs them, giving you electronic mail and the comfort of security.

The MainLan Starter Pack—everything you need to connect two computers, including two network boards, software, documentation, and one 16.5' shielded cable with terminating plugs. The Extension Pack contains the network board, and one cable and plug set.

FRIENDLY LAN

MainLan's menu system lets you spend your time working instead of learning how to make it work. To transfer or manipulate files, redirect printer output, or send E-mail, just press the appropriate key. You can be a full-fledged member of the network while using as little as 50k. All this at a transmission rate of 4 Mbps.

LAUDABLE LAN

Don't just take our word on it. "PC WORLD" in England says "MainLan is a revolutionary way of operating in a multiple machine environment without having to make all of the usual sacrifices. It has the potential to be the low-cost networking standard of the future." The kind of features that earned

MainLan the PC MAGAZINE EDITOR'S AWARD at the 1988 British Personal Computer Awards. That's MainLan.

COMPATIBLE LAN

Because MainLan is NETBIOS compatible, you can run most of the popular multiuser NETBIOS compatible applications programs without modifications. Supports file and record locking.

THRIFTY LAN

MainLan is easy on your pocket-book, too. Our unique hardware design costs less to produce—and you enjoy the savings. You'll also enjoy not having to have an expensive network server.

THE FEATURES

- ▶ NETBIOS compatible
- ▶ 4 Megabits per second transmission rate
- ▶ Needs as little as 50k RAM
- ▶ Printer Sharing
- ▶ Hard Disk Sharing (Virtual Drive)
- ▶ 90 days free support

THE GUARANTEE

It's simple. Try MainLan at our special introductory offer of \$399 for the 2-PC Starter Pack and if it's not what you want in a LAN, return it within 30 days and we'll return your money. The MainLan Extension Pack for one PC is \$199. Limit of one Starter Pack per customer site, please.

Yes, I want to see what MainLan's full-featured LAN will do for me. I understand that I may return it anytime within 30 days, for a full refund if I am not completely satisfied.

1 Starter Pack.....\$399.00 + \$10 Shipping & Handling*
* Extension Pack(s).....\$199.00 + \$10 Each Shipping & Handling*
TOTAL*.....\$

*Shipping via UPS Blue. **Florida residents add 6% sales tax.

■ UTILITIES

as the title at the top of the menu window. It may contain up to 26 characters. You'll probably use it for the name of your printer. The line itself is not optional: to leave it blank, insert a blank line in its place in the PMF file.

The lines that follow define printer menus and control codes. Each line contains one string of menu text followed by the codes that are associated with it. Menu text does not have to be enclosed in quotation marks, but it *must* be terminated with a semicolon. The semicolon won't show up in the window; it is used solely to mark where menu text ends and control codes begin. The codes themselves must adhere to the same flexible syntax outlined for entering codes on the command line following a /C qualifier or in the menu window's input bar. Extra white space between con-

■ With the menu window popped up, a string of codes can be sent by pressing a function key.

trol codes is ignored, so you can use spaces, commas, and tabs as desired to format a PMF file for readability.

The first three lines in a PMF file for Epson-compatible dot matrix printers might look something like those indicated below:

EPSON RX/FX PRINTERS

```
Elite Mode On; 27,"M"
Elite Mode Off; 27,"P"
```

The menu line text—everything to the left of the semicolon—may be up to 20 characters long; any additional characters will be ignored. The control codes and text to the right of the semicolon may comprise up to 255 bytes, though only a total of 20 characters will show within the display window. In both of the examples shown above, the code strings are just 2 bytes in length: <ESC> (decimal 27) followed by a control character.

Menu lines are incorporated into SET-UP2's menus in the same order in which they occur in the PMF file. For example, if

FINALLY!

EASYFLOW

An on-screen flowchart processor that knows about flowcharts - not just another "screen draw" program that makes you do most of the work. EASYFLOW is a powerful full-screen graphics program dedicated to flowcharts and organization charts. With it you can quickly compose charts. More important, you can easily modify charts so they are always up to date.

- ▶ **Automatic:** Fully automatic text centering within shapes, both horizontally and vertically. Fully automatic line routing & re-routing.
 - ▶ **Fast:** Written in assembly language for speed.
 - ▶ **Large:** Charts up to 417 columns wide by 225 lines high. Chart too large for your printer? EASYFLOW automatically breaks the chart up & prints it in page size pieces.
 - ▶ **Standard:** All standard flowcharting shapes included. Custom shapes can be ordered.
 - ▶ **User friendly:** Don't take our word for it. PC Magazine says "EASYFLOW lives up to its name. It's hard to imagine any easier and more flexible way to produce basic and even complex flowcharts". [March 10th 1987 issue, page 278.]
 - ▶ **Mouse:** Optional but fully supported.
 - ▶ **It prints:** On most popular matrix printers including IBM, Epson, Toshiba, HP LaserJet, LaserJet-Plus and many others.
 - ▶ **It plots:** On HP7440, 7475, 7550, 7570, 7585B and compatible plotters.
 - ▶ **It works:** We are contractually prevented from mentioning the name of the "big eight" accounting firm that purchased a world-wide site license, but we can tell you that they spent months evaluating all available flowcharting packages before choosing EASYFLOW.
 - ▶ **Rush delivery:** Order by noon today (eastern time) and you'll have it tomorrow. Rush delivery charge is \$10.50 (instead of \$2.00) and is available only to continental USA and Canada.
 - ▶ **Documented:** 100 page manual plus over 150 screens of context sensitive help.
- EASYFLOW works on IBM PC's, IBM PS/2 and compatibles. Requires 384 K memory, DOS 2.0 or higher and an IBM CGA/EGA/VGA or Hercules monochrome compatible adapter card.
- Order direct for only **\$149.95 + \$2.00 S&H (USA/Canada), \$10.00 (foreign).** Payment by M.O., cheque, VISA, Mastercard or Company PO.

The chart fragment above was produced on an HP LaserJet-Plus and is actual size and unretouched. Publication quality charts like this can be produced using only minutes of preparation time and seconds of print time.

■ UTILITIES

a file contains 22 separate menu lines, the first 10 will correspond to function keys F1 through F10 on page 1 of the SETUP2 menu window, the next 10 to function keys F1 through F10 on page 2, and page 3 will contain just 2 lines.

With the menu window popped up, a string of codes can be sent either by pressing a function key or by using the Up- and Down-Arrow keys to highlight the desired menu choice and pressing Enter. Use the PgUp and PgDn keys to move between menu pages.

Comment lines can be inserted anywhere into a PMF file. A pound sign (#) in column 1 indicates that a line is to be treated as a comment line. See the PMF file listings in the sidebar "Customizing SETUP2 for Epson Dot Matrix Printers and HP LaserJets" in order to see just a few examples of the ways that comment lines may be used.

If SETUP2 encounters a syntax error while processing a PMF file, it will stop and display the error message "Make file error - line XXX," where XXX represents the line number where the error occurred. Since only menu lines are included in this count, however, the "line number" will probably differ from that of the physical line in the PMF file. For example, suppose your PMF file contains three comment lines and a title line preceding the first menu line. If SETUP2 reports a make file error in line 5, the error actually lies in the ninth line of the file—the fifth menu line. If an error is reported, SETUP2 will not install itself in memory.

Because of the enormous variety of printers on the market and the lack of any relevant standards, I did not build in a default configuration for SETUP2. You'll find a complete listing of all your printer's capabilities and the control code sequences used to invoke them in the manual that came with it.

MODIFYING THE CODE While the SETUP2 program will allow you to change your printer menus with nothing but an ASCII text editor, there are two additional patch points you might need to change with DEBUG.

If you want to use a hotkey combination other than the default Ctrl-Right Shift, you must replace the value at offset 01B3h

SHIFT_MASK Value	0	1	2	3	4	5	6	7	8	9	A	B	C	D	E	F
Alt																
Ctrl																
Left Shift																
Right Shift																

Figure 2: The shift mask values in the table above correspond to the different hotkey combinations formed with the Alt, Ctrl, Left Shift, and Right Shift keys. Decide which keys you want, then find a column with dots corresponding to those keys but no others. As explained in the text, use DEBUG.COM to enter the value found at the bottom of the column at offset 01B3h in the program.

(which is normally 5) with a value obtained from the shift mask table shown in Figure 2. Thus, to change from Ctrl-Right Shift to Ctrl-Alt, for example, you need to enter the hex value C. (Remember, DEBUG always thinks in hex.) Assuming DEBUG.COM is in your current DOS path and SETUP2.COM is in your current directory, the entire DEBUG command sequence would be

```
DEBUG SETUP2.COM
E 01B3 0C
W
Q
```

Similarly, if your printer is connected to LPT2 or LPT3 rather than to the default LPT1, you must use the same procedure to change the byte at offset 018Ah (normally 0) to 1 for LPT2 or to 2 for LPT3. Be sure always to make a backup copy of the program before you work on it with DEBUG, so if you make a mistake you'll still have the backup to fall back on.

PROGRAMMING NOTES Like many other pop-up utilities that have appeared in PC Magazine, SETUP2 paints a window onto the screen when it senses that the hotkeys have been pressed, and restores the screen upon exit. Unlike many of its predecessors, however, SETUP2 uses BIOS calls to do the reading and writing. This means that if you're running on an older PC, the menu window won't snap into view as quickly as some others, but it also

means that SETUP2 will be compatible with a greater number of machines. On a fast 286 or 386 machine, you'll hardly notice the degradation in speed. The one point at which the program accesses video memory directly is when the highlighted menu bar is moved up or down. The reason is that while it's aesthetically acceptable for a window to paint itself on-screen in full view of the eye, a slow-moving light bar looks sloppy.

Programmers may note that in order to make maximum use of memory, SETUP2 stores control codes in a format similar to that of a linked list. Each binary string is preceded by 1 byte that denotes its length. Thus, a code sequence only 1 byte long will require 2 bytes of memory, while a more complex sequence that is 255 bytes in length will consume 256 bytes. SETUP2's internal output routines use the count byte that begins a string of control codes to determine how many characters to transmit to the printer.

SETUP2 also manages memory in a well-behaved manner. Rather than play fast and loose with DOS resources, the program shrinks its initial memory allocation to 64K before processing a PMF file, determines the file's size, and then requests a buffer of that size from DOS. The PMF file is read into the buffer and processed from there. This is an example of how .COM programs *should* behave—in direct contrast to how many of them really do act.

PMF files may be up to 64K in length. Anything greater will cause SETUP2 to report that the file is too large for processing. The number of menu choices and control codes that can be incorporated into SETUP2 is limited only by the number of lines you can fit into one PMF file.

Installed without any menus, SETUP2 will take up slightly less than 4K of memory. The amount of RAM required with menus is determined by the number of menu lines and the length of the control code sequences associated with each. As a rule of thumb, count on 21 bytes plus the number of control codes for each line, above and beyond SETUP2's base requirement.

Jeff Prossie is a contributing editor of PC Magazine.

■ ENVIRONMENTS ■ CHARLES PETZOLD

IBM'S OS/2 1.1 PROGRAMMING TOOLS

IBM's technical documentation for OS/2 1.1 and the Presentation Manager runs to more than 3,000 pages. Here's a breakdown of what you get, and what to expect from Microsoft.

It's a brave new world in programming. Remember the early days of DOS? Up through Version 2.0, IBM could relegate all the necessary technical information to appendices of its regular DOS user manuals. In the DOS 1.1 manual, the technical information fit in 70 pages with wide margins. IBM's first separately published DOS *Technical Reference* manual (for DOS 2.1) was only about 150 pages.

You didn't need any more. Even today, many DOS programmers get by without any official technical documentation from IBM or Microsoft. DOS and the ROM BIOS are simple enough to be thoroughly documented in programming books. There are even several small reference guides, such as Ray Duncan's *MS-DOS Functions* and *IBM ROM BIOS* (published by Microsoft Press), that provide programmers with most of the information they need to use DOS and the BIOS.

OS/2 and the Presentation Manager are a different story, however. With OS/2 Standard Edition 1.1, you've got an operating system with over 700 documented function calls. Moreover, programming for the Presentation Manager often requires more than just a compiler and technical documentation. Header (or include) files make it much easier for programmers to use the function calls, and various tools with which to design icons, bitmaps, and dialog boxes have become as important as a compiler.

Both IBM and Microsoft are (or will be) selling Programmer's Toolkits and Technical Reference sets for OS/2 1.1. As with OS/2 1.0 itself, IBM released its doc-

umentation earlier than Microsoft. IBM began sending free version 1.1 updates to registered purchasers of its original OS/2 1.0 Programmer's Toolkit and OS/2 1.0 Technical Reference packages in January. These updates, which completely replace the earlier editions, began appearing on the shelves of computer stores at the same time.

IBM's OS/2 1.1 Programmer's Toolkit costs \$787, and the Technical Reference package is \$210—5 percent higher than the original OS/2 1.0 versions. Currently, IBM is supporting Presentation Manager programming for only two languages: C and assembly language. These use the IBM C/2 version 1.1 compiler (\$560) and the IBM Macro Assembler/2 (\$225), respectively.

MICROSOFT'S PLANS Though its release is still (as of late January) several months away, Microsoft is also expected

to produce an OS/2 Programmer's Toolkit. Unlike the IBM version, which separates the toolkit and technical reference, Microsoft intends to consolidate everything into one package.

With OS/2 1.0, the differences between the IBM and Microsoft toolkits were considerable. In particular, IBM's C header files declared the OS/2 functions with uppercase function names; Microsoft's header files used mixed-case function names. And in these header files Microsoft also introduced new data types designed to be consistent with the eventual OS/2 1.1 conventions.

The inconsistencies between toolkits have been eliminated for OS/2 1.1. I expect the C header files in IBM's and Microsoft's packages to be nearly identical. In most cases, the differences will involve only a different copyright notice.

However, I still expect to see some differences between the IBM and Microsoft toolkits. The tutorials will certainly be different, and the function call references may be structured differently. I don't expect to see the same quantity of information on device drivers in Microsoft's toolkit as IBM provides. (Microsoft usually has separate device driver kits.) Naturally, I'll report on the Microsoft toolkit here when I get my hands on it.

WHAT'S IN WHAT It's still not clear to me why IBM chose to separate the OS/2 technical documentation and tools into two packages. I can't imagine a situation where you would need one package but not the other.

■ **PM programming**
requires more than just a compiler and technical documentation. Header files make it easier to use function calls.

CopyWrite copies everything!

CopyWrite removes copy-protection from hundreds of software packages. If you find a case where CopyWrite can not remove protection, we will send you a custom CopyWrite for a fee.

CopyWrite still includes the utility that makes copies of hundreds of other software packages.

CopyWrite is revised regularly to keep up with the latest in copy protection. Revisions are available for \$25 US.

CopyWrite requires an IBM PC, XT, AT, PS/2 or compatible with 256k bytes of memory and at least one diskette drive. It is not copy-protected. CopyWrite is not for making copies for sale or trade, or for any other use that deprives software authors of payment for their work.

CopyWrite costs \$75 US. Customizing is an additional \$100 US per product.

When you order a new CopyWrite, ask us about Antidote to protect your computer from virus attacks.

To order, send us a check for \$75 US funds, or call with your credit card. We ship within a day. Available on 3 or 5 inch diskettes.

PC DiskSAVER

Has heat destroyed your hard disk and all your valuable data? Are you faced with changing out a hard disk soon...due to bearings failing? Well, join the club! Heat is a cancer to hard disks that will sooner or later destroy them. The new technology disks all produce more heat than desired and many of them will suffer an early death in the confines of your PC system chassis.

The PC DiskSAVER sits below your half height disk drive and cools it 30+ degrees, while operating from your current power supply. The actual life span of your hard disk may increase by several years. The PC DiskSAVER comes in three models and installs easily in any IBM PC, XT, AT, compatible or clone and comes with full instructions.

Order your PC DiskSAVER today.

■ ENVIRONMENTS

The IBM OS/2 1.1 Programmer's Toolkit consists of the following items:

- A 50-page *Programming Overview* manual and a 100-page *Building Programs* manual that cover the basics of programming for OS/2 1.1.

- A 500-page *Programming Guide*, which is a tutorial, with code examples, on programming for OS/2 1.1 and the Presentation Manager. (I'll discuss this below more fully.)

- Two diskettes (in both 5¼-inch and 3½-inch high-density formats) that include C header files, assembler include files, the OS2.LIB import library, tools such as the resource compiler and icon editor, and sample code.

The IBM OS/2 1.1 Technical Reference collection contains only manuals and no diskettes. There are four manuals, however, which are divided into seven volumes:

- A *Programming Reference* manual divided into three volumes that total some 1,400 pages. This documents the OS/2 1.1 function calls, Presentation Manager messages, and the graphics engine interface.

- A 190-page *C/2 Bindings Reference* and a 180-page *Macro Assembler/2 Bindings Reference* that show the OS/2 data structures and functions as they are declared in the C header files and macro assembler include files.

- An *I/O Subsystems and Device Drivers* manual divided into two volumes that contain a total of 870 pages. This manual describes device drivers (including those for PM screen and printer graphics) and IOCTL calls.

LARGE-FORMAT MANUALS The new IBM documentation comes in 8½- by 11-inch softcover manuals with three-hole and two-hole punches. Prior to the release of OS/2 1.1, IBM adapted this format for technical manuals describing OS/2 Extended Edition, and manuals of this size have been common for years for IBM's non-personal computers.

Perhaps surprisingly, the more than 3,000 pages of documentation you get with IBM's two OS/2 1.1 packages occupy only about 5 inches of shelf space. With such a multitude of manuals, however, you may not want to put them on a shelf. For about \$45 I ordered a "catalog rack"

The power and performance of big-system CADD...MicroStation PC

How MicroStation works for Teledyne Brown Engineering

Teledyne Brown, an Intergraph customer, is the payload mission integration contractor for George C. Marshall Space Flight Center. Teledyne Brown ensures the successful integration of scientific experiments with the space shuttle orbiter and the Spacelab module, including subsystems.

The compatibility of MicroStation PC with Intergraph's other software offerings allows Teledyne Brown to transfer projects in several stages between the VAX and MicroStation until payload integration is complete.

Shaded image of a completed MSL payload on the shuttle

Multi-Purpose Experiment Support Structure (MPSS) carries a wide variety of scientific experiments into space.

Detail of MSL, shown on MicroStation PC

Materials Science Laboratory (MSL), attached to the support structure, shown on MicroStation PC

MSL payload in position on the shuttle, shown in 2D on MicroStation PC

Powerful graphics

A true 3D PC CADD package, MicroStation performs shading and hidden line removal. Undo/Redo, DXF In/Out, Linear/Area Patterning, and B-splines are just a few of the hundreds of commands that help you enter, manipulate, view, and store a wide variety of designs.

Speed and ease of use

MicroStation is one of the fastest PC CADD solutions available, and it's extremely easy to use. It was created for design and drafting — even large-scale, production-size files — without additional hardware.

Flexibility

Up to 32 reference files can be attached to the active file for scaling, rotating, or clipping. MicroStation features dynamic update which allows you to see all the characteristics of the element before placement — minimizing errors and time-consuming corrections.

Growth

Designs created with MicroStation are compatible with Intergraph's VAX and UNIX applications — providing an inexpensive entry into our broad range of systems without the usual file translation problems of other software packages.

Quality. Reliability. Performance.

See for yourself. Call for more information or for a referral to the MicroStation reseller or education center nearest you.

CIRCLE 265 ON READER SERVICE CARD

Easy come.

Easy go.

Life is hard. And then you get a Connection CoProcessor™ board. It's Intel's way of letting you communicate almost effortlessly, using your PC. And for other PCs and FAX machines to send messages to your PC with the same ridiculous ease.

True, you do have to press a few keys on your PC. But you don't have to set any protocols, wait for a printer to do its thing, or stand in line at a FAX machine.

The real labor saver here is CAS. CAS is a software link which allows you to send information directly from applications like Lotus® 1-2-3 rel. 2, WordPerfect® 5.0, Q&A® 3.0 and Sidekick® Plus. You can now send documents simply by indicating what you want to

send and who you want to send it to.

And our Connection CoProcessor won't waste your valuable PC time while it's communicating. You can continue to work while it sends programs, data and text, across the street or across the globe.

Because the Connection CoProcessor uses its own microprocessor and memory to take on the time-consuming job of sending and receiving information in the background.

All this, and Intel's toll-free technical support and a five-year warranty. Call us at 1-800-538-3373 to find out how Connection CoProcessor beats the way you're communicating today. Coming and going.

The Intel logo, consisting of the word "intel" in a lowercase, sans-serif font, with a registered trademark symbol (®) to its upper right.

■ ENVIRONMENTS

ways drawn in a counterclockwise direction." Actually, the direction in which GpiBox draws the box is dependent on how the program specifies the two opposing corners of the box. (And yes, it some-

times does make a difference in which direction the GPI draws the box.) The description of GpiBox in the *Programming Reference* manual has the correct description of how this function works.

FUNCTIONS AND BINDINGS The three-volume *Programming Reference* manual is, naturally, the core of the IBM OS/2 1.1 Technical Reference package. Its first two volumes contain descriptions of all the documented functions, in alphabetical order, with each function beginning on a new page.

Each function is presented with its parameters, possible return values, error codes, and some remarks. When a function involves a data structure, the fields of the structure are also described. I'm particularly happy to see a list of the possible error codes associated with each function;

■ *The Programming Reference* manual is the core of IBM's OS/2 Technical Reference package.

this was missing from IBM's Technical Reference set for OS/2 1.0.

In practice, however, IBM's *Programming Reference* turns out to be a little difficult to use. Although most Presentation Manager programming will be done in C, the function documentation in the manual is language-independent. To find the C syntax and the names of structure fields in the C structures, you must consult the *C/2 Bindings Reference* manual.

This is a sound and traditional way of documenting an API, because it allows the Technical Reference to be used for more than one language. But I think it would be better to show the C syntax along with the language-independent description of each function. It seems to me a small concession to reality.

I don't know yet whether I will eventually use IBM's or Microsoft's reference manuals for my day-to-day OS/2 programming. I will have to wait and see what Microsoft's manuals are like. I suspect that they will be more oriented toward C and easier to use for C programmers. But IBM has done a good job on its manuals, and for the time being, they are more than adequate.

Our Printer Sharing Unit Does Networking!

An Integrated Solution

Take our Master Switch™, a sophisticated sharing device, combine it with MasterLink™ networking software for PCs, and you've got an integrated solution for printer and plotter sharing, file transfer, electronic mail, and a lot more. Of course you can also share modems, minis, and mainframes or access the network remotely. Installation and operation is very simple.

Useable

Or you can use the Master Switch to link any computer or peripheral with a serial or parallel interface. The switch accepts over 20 commands for controlling the flow of data. It may be operated automatically, by command, or with interactive menus. Its buffer is expandable to one megabyte and holds up to 64 simultaneous jobs. The

MasterLink™ utility diskette for PCs comes with every unit and unleashes the power of the switch with its memory-resident access to the commands and menus.

Other Products

We have a full line of connectivity solutions. If you just want printer sharing, we've got

it. We also have automatic switches, code-activated switches, buffers, converters, cables, protocol converters, multiplexers, line drivers, and other products.

Commitment to Excellence

At Rose Electronics, we're not satisfied until you're satisfied. That's why we have thousands of customers around the world including large, medium, and small businesses, hospitals, stores, educational institutions, and Federal, state, and local governments. We back our products with full technical support, a one-year warranty, and a thirty-day money-back guarantee.

■ POWER PROGRAMMING ■ RAY DUNCAN

USING EXTENDED MEMORY, PART 1

Writing programs that access memory above the normal DOS 1MB barrier requires shifting back and forth from protected mode. It's tricky, but here are the ways you can do it.

In today's jargon, *extended memory* is the term used for RAM storage addresses above the 1MB boundary on 80286- and 80386-based PCs. It must not be confused with *conventional memory*, which comprises addresses below 1MB, or with *expanded memory*, which is bank-switched memory that can be mapped as pages into the conventional-memory address space. A sketch of the relationship between conventional memory and extended memory is shown in Figure 1.

If you own a PC AT clone of almost any brand, you probably have at least a small amount of extended memory in your system. These days, such clones typically arrive with 1MB of RAM installed on the motherboard, of which only 512K or 640K actually starts at address 0. The addresses for the remainder begin at 1MB. Moreover, if you have purchased any add-in memory board for an AT-class machine, that board can probably be configured as extended memory, expanded memory, or a combination of both.

The physical, linear address of the magic 1MB boundary is 100000h. Looked at in binary terms, this means that all memory locations above that boundary must have addresses at least 21 bits long. In their protected mode, 80286 and 80386 CPUs are capable of generating these addresses directly, and protected-mode operating systems such as OS/2 and Unix and Xenix can use all the extended memory you can plug into your machine for storing programs and data.

By contrast, DOS and its applications run on the 80286 and 80386 in *real*

mode—a sort of 8086/88 emulation mode. In real mode, the 80286 and 80386 CPUs can generate only 20-bit addresses. The obvious implication would seem to be that DOS and its client programs cannot make use of extended memory for storage of programs and data.

Yet our daily experience tells us otherwise. We've all got RAMdisks, disk caches, print spoolers, TSRs, and other

utilities of every description that *do* exploit extended memory when it is present. How do these programs reach these "obviously unreachable" memory addresses, and how can you make similar use of extended memory in your programming?

ACCESSING EXTENDED MEMORY

The first thing to understand about using extended memory is that the lunch is not free. With but two bizarre exceptions (I'll discuss these in the next issue), a program does have to be running in protected mode to read and write memory locations above the 1MB boundary. And moving safely from real mode to protected mode and back again is not a trivial task.

Simply getting into protected mode from real mode isn't hard. You just set the PE (protect enable) bit in the 80286's MSW (machine status word) and you're there! But unless you've done some additional required housekeeping, your program will immediately crash. Certain data structures and CPU registers that have no meaning in real mode must be initialized. For example, you must set up a global descriptor table (GDT) that controls protected-mode memory mapping, segment types, and access rights, and you must load the address of the table into the CPU's GDT pointer register.

Assuming you manage to enter protected mode and read or write the data of interest, you must then return to real mode so your program can continue its main line of execution. After all, you do want to be able to invoke DOS to read or write files and interact with the user, and I guarantee you

Figure 1: This diagram shows the relationship between conventional and extended memory. Expanded memory pages (not shown here) are usually mapped into conventional memory between the 640K and 1MB boundaries, although EMS 4.0 also allows pages to be mapped below the 640K boundary.

■ POWER PROGRAMMING

that DOS will be quite confused if you call it in protected mode.

Realizing this, your first inclination would be to haul down your handy Intel 80286 *Programmer's Reference* and look up the machine instruction that switches the CPU from protected mode to real mode. Surprise! There isn't one! When the 80286 was designed, Intel's engineers never dreamed that anybody would ever

want to make a transition from the clearly superior protected mode back to dull old real mode! Luckily, there is an escape hatch, however undesirable it may sound: if you halt the CPU and restart it, the CPU will restart in real mode.

CAN YOU BELIEVE IT? On 80286-based AT-class machines, the actual technique used by VDISK and such programs

for making the switch back to real mode is an almost unbelievable kludge. I can still remember a feeling of incredulity—back in the DOS 2.0 days—when I read through the VDISK and ROM BIOS source listings to find out how they were accomplishing this magic. A certain value is stored in a reserved memory location to serve as a signal to the ROM BIOS, and a special command is sent to the keyboard controller. Then the CPU is halted.

The keyboard controller, in its own good time, recognizes the command and generates a special interrupt that resets the CPU. The CPU then starts execution at FFFF:0000h, as usual, and begins the ROM BIOS POST (power-on self-test). The ROM BIOS checks for the special value that was earlier saved in RAM, realizes—finally—that it is waking up from an intentional halt, and returns control to the previously executing program rather than continuing with the ROM bootstrap. The turnaround time for this whole process can be on the order of several milliseconds. Microsoft's Gordon Letwin has aptly characterized it as "turning off the car to change gears."

Fortunately, things aren't quite so bad on PS/2 or 80386-based machines. PS/2s have special hardware support that allows a faster reset cycle (though the CPU still must be halted for the reset). 80386-based machines, on the other hand, can switch back to real mode by changing a bit in a control register, so they don't need to halt the CPU at all. That's because by the time the 80386 was being designed, it was becoming obvious that DOS and the programs that run under it weren't going to disappear any time soon.

ROM BIOS FUNCTIONS In any event, you don't have to worry too much about these gory details in writing your own application programs, because the ROM BIOS provides two functions that let you access extended memory in a hardware-independent manner. These are interrupt 15h function 87h, which copies a block of data from any location in conventional or extended memory to any other location; and interrupt 15h function 88h, which returns the amount of extended memory installed in the system. The parameters and results of these two functions are outlined

Initializing Extended Memory

Interrupt 15h function 87h—Move Extended Memory Block

Call with:

AH	= 87h
CX	= number of words to move
ES:SI	= segment:offset of global descriptor table

Returns:

If function successful

Carry flag	= clear
AH	= 00h

If function unsuccessful

Carry flag	= set
AH	= status
	01h if RAM parity error
	02h if exception interrupt error
	03h if gate address line 20 failed

The global descriptor table is composed of six 8-byte descriptors used by the CPU in protected mode. The calling program is responsible for initializing the following portions of the table (the remainder, offsets 00h–0Fh and 20h–2Fh, is initialized by the ROM BIOS):

Byte(s)	Contents
00h–0Fh	reserved (should be 0)
10h–11h	segment length in bytes (2×CX-1 or greater)
12h–14h	24-bit linear source address
15h	access rights byte (always 93h)
16h–17h	reserved (should be 0)
18h–19h	segment length in bytes (2×CX-1 or greater)
1Ah–1Ch	24-bit linear destination address
1Dh	access rights byte (always 93h)
1Eh–2Fh	reserved (should be 0)

Figure 2: ROM BIOS interrupt 15h function 87h, whose parameters and results are shown above, allows data to be moved between any two locations in conventional or extended memory. It is also used to load the required global descriptor table.

■ POWER PROGRAMMING

in Figures 2 and 3. (There's an additional function—interrupt 15h function 89h—that allows a program to enter protected mode and stay there, but we'll ignore this one for now.)

The parameter block required by interrupt 15h function 87 is actually a partially filled-in global descriptor table. The ROM BIOS takes care of the remaining necessary initialization of the table before it switches the CPU into protected mode. The most important thing you need to notice about the parameter block is that the addresses you place in it are 24-bit linear byte addresses—numbers from 000000h to FFFFFFFh—rather than the more familiar segment:offset pairs. To convert the latter into the former, you shift the segment left 4 bits and then add the offset. The 3 bytes of a linear address are stored in their natural order, with the least-significant byte at the lowest address.

You must use these ROM BIOS routines with caution, if at all, for several reasons. First, of course, data stored in extended memory is volatile; it is lost if the machine is reset or turned off. Second, on 80286-based machines with a PC AT architecture, the switch from real mode to protected mode and back again is a relatively slow process. This can result in lost interrupts for communications programs running at high bps rates and can have other unpleasant consequences. Lastly, programs that use these ROM BIOS functions are incompatible with the DOS Compatibility Box of OS/2.

PRIMITIVE MANAGEMENT You may already have spotted the major weakness of the extended memory functions supported by the ROM BIOS. While they let you access any location in extended memory quite freely, they do not make any attempt to *arbitrate* between two or more programs or drivers that are using extended memory at the same time. For example, if an application program and RAMdisk both attempt to put data in the same area of extended memory, no error will be returned to either program, but the data of one or both may be destroyed.

Regrettably, neither IBM nor Microsoft came up with any standard scheme for the cooperative use of extended memory by DOS programs during the first few years

Figure 3: ROM BIOS interrupt 15h function 88h is used to return the amount of extended memory installed in the system and must be "hooked" by programs that use the "interrupt 15h method" of managing extended memory allocations.

of the PC AT's existence. Third-party software developers were left to their own devices, and almost all of them eventually settled on one of two methods for extended memory management. I'll call these the "VDISK method" and the "interrupt 15h method."

When a VDISK driver is loaded, it saves information about the amount of extended memory it is using in two places: (1) in a data structure located in conventional memory and found via the interrupt 19h vector and (2) in a data structure located in extended memory at the 1MB boundary. If additional copies of VDISK are loaded (to create additional logical RAM-disks), each looks at both of these areas to determine the amount and location of extended memory still available and updates them to reflect any additional extended memory assigned.

Applications that adopt the VDISK method of extended memory management simply update the interrupt 19h and extended memory indicators in the same manner. At least, they ought to! In actual practice, some applications update only the interrupt 19h area and some update only the extended memory area. As a consequence, if you adopt the VDISK method yourself, you must program very defensively: check both areas, assume that the lesser amount of extended memory is available, and then update both allocation signatures to be consistent and correct for

any programs that may be loaded after yours.

The interrupt 15h method of implementing extended memory management is much less complicated. The application calls interrupt 15h function 88h to find out how much extended memory is available and then "hooks" the interrupt 15h vector so as to intercept calls made by other programs. Thus, when the application sees a subsequent call to interrupt 15h function 88h, it returns a reduced value that reflects the amount of extended memory it is using. (All other interrupt 15h calls are simply passed on to the original owner of the interrupt vector.) This technique deceives the other application into believing that the extended memory being used by the first program does not exist.

In sum, the VDISK method allows extended memory to be allocated upward, starting from the 1MB boundary, and the interrupt 15h method allows extended memory to be allocated downward, from the top. Since both management methods are in common use, however, you must take both into account when writing your own programs. Furthermore, neither method provides protection from applications that simply switch into protected mode, find the size of extended memory by reading and writing it directly, and then use it all without regard to other, previously loaded programs.

Moreover, both methods share a fatal weakness: the management is not dynamic but is rather first-in-last-out. If a program terminates and "releases" its extended memory, that memory is not available for use by other programs until all the extended memory that was allocated afterward by other applications is also released.

During 1988—4 years after the introduction of the PC AT—two long-overdue proposals for a more sophisticated, cooperative use of extended memory under DOS were introduced. The first is the *Extended Memory Specification (XMS)*, which represents a collaborative effort of Microsoft, Intel, AST Research, and Lotus. The second, which applies only to 80386-based systems, is the *Virtual Control Program Interface (VCPI)*, and it is sponsored by Quarterdeck Office Systems and Phar Lap Software. I'll have more to

If You Keep
An Open Mind,
You Don't Stop
With The Standards.

You Begin.

There's a big difference between settling for standards and setting them. At NCR, we're open-minded about open systems architecture. That means the standard is the starting point; and the sky's the limit on how flexibly the technology can be applied and advanced.

With technology, we're so open-minded that our 25MHz 386 is faster than a 25MHz 386. How? We didn't settle for the standard 32KB of cache memory offered in many other PCs. Instead, we raised it to 64KB. This

gives our new PC925™ faster response time and throughput. The result—increased productivity. And one more example of NCR adding value to advance an industry standard to a new standard of excellence in performance.

Our open-mindedness opens unlimited opportunities for applying PC technology to a variety of business problems. Because no business considers its computer needs standard.

At NCR, we're open to finding the PC solution you have in mind for your business.

NCR PERSONAL COMPUTERS
Open For Business.

■ POWER PROGRAMMING

say about the XMS and VCPI, and in the next installment of this column, I'll be presenting the assembly language and C source code for some extended memory routines you can use in your own programming.

THE VDISK INDICATORS In the discussion above, I was intentionally rather vague about VDISK's data structures. Here are more-specific details of how the VDISK memory management approach works.

VDISK takes over the interrupt 19h vector, which normally contains the address of the ROM BIOS routine that reboots the system, and points it to an interrupt 19h handler within itself. This new handler does nothing more than transfer control to the original handler, so its mere presence does not affect the system's operation. However, a program can fetch the segment portion of the interrupt 19h vec-

tor, assume that it points to the beginning of a VDISK driver if one is loaded, and use it to determine whether a VDISK driver is in fact present. If a VDISK driver is loaded, its name and the address of the first free (unallocated) extended memory can be found at fixed offsets from its base.

The exact memory addresses to be inspected may vary from one version of VDISK to another, but you can obtain the necessary information from the VDISK .ASM source file included on the IBM PC-DOS distribution disks. To get a practical, illustrative example, I put the line

```
DEVICE=VDISK.SYS /E
```

in the CONFIG.SYS file of a PC-DOS 3.3 system and rebooted. (The /E switch directs VDISK to use extended memory.) During system initialization I observed the usual message, which indicated that VDISK had created its default-size 64K RAMdisk as logical drive F:. I then in-

spected the interrupt 19h vector and found that it contained the address 1BF3:008Eh. Figure 4 is a hex dump of addresses 1BF3:0000h through 1BF3:003Fh—the first 64 bytes of the VDISK driver.

Bytes 00h through 11h are the VDISK device driver header, which contains information about the driver's entry points, capabilities, and other things of interest to the DOS kernel. In this example, bytes 12h through 2Bh are the initial portion of a volume label that VDISK places in the root directory of its RAMdisk. Dig out your ASCII/hex chart and you'll see that the label contains the string VDISK and the PC-DOS version number. Finally, bytes 2Ch through 2Eh contain the linear address of the first free byte of extended memory: 110000h in this example (1MB + 64K, since VDISK is using the 64K starting at 1MB).

Now let's take a look at the VDISK allocation information stored in extended

CO/SESSION™ IS THE FASTEST, EASIEST, MOST POWERFUL REMOTE COMPUTING SOFTWARE!

Remote PCs need no longer remain remote with the powerful new features of CO/SESSION 3.1. CO/SESSION is the ideal solution for all your PC communication needs.

HOME COMPUTING Use CO/SESSION to work at home and run your office PC as if you were there. Access files, execute DOS commands, run programs, print reports and more.

CUSTOMER SUPPORT Provide on-site support and training to customers without moving an inch. CO/SESSION allows you to work with remote users as if you were there.

NETWORK ACCESS Link remote users and offices to your network and enjoy on-line access to all the network resources.

FILE TRANSFERS Transfer files by modem or direct cable. CO/SESSION is ideal for laptops, home and remote offices!

AUTOMATED SESSIONS Add the ability to automate and schedule file transfers, printing and running of programs on remote PCs with SESSION/XL.

BETTER THAN CARBON COPY PLUS CO/SESSION is up to 400% faster, easier to use, more powerful and lockup free. If you're a current Carbon Copy user, ask about our upgrade program. You'll see the difference in minutes.

IMMEDIATE AVAILABILITY Call today for additional information on CO/SESSION and SESSION/XL or visit your nearest dealer and tell them you want the best in remote computing software. CO/SESSION can be purchased in single or two machine licenses.

NOW YOU CAN DESIGN JUST ABOUT ANYTHING...INCLUDING YOUR OWN CADD SYSTEM!

MAC
CADD
3.0

Anyone can produce a computer-aided drafting and design package that sells for thousands of dollars. But creating one that's fast, powerful, and affordable takes real ingenuity.

That's exactly what we've done at Generic Software.® We sell the most widely used CADD program in the world for under \$500.

PC Magazine ranked it "Editors Choice" in a face off with 17 low-cost CADD packages. "This product is an outstanding value from every point of view and is highly recommended." "A paperback version of AutoCAD," stated PC Week.

And our CADD programs are just part of what we offer.

You can start with Generic CADD Level 1,™ then advance to other levels as your needs—and skills—expand.

And you can use our CADD add-ons, Utilities, and symbols libraries to design the CADD system that fits your needs.

You only pay for the functionality you need, and the functionality you get has depth.

Critic tested, market approved. Generic Software offers price, quality, and support. Match our customer support against anyone!

- Unconditional 60-day guarantee on most products
- Unlimited free technical support
- Free monthly newspaper
- Regular updates at modest prices.

All adding up to prove that the only thing generic about us is the price.

Call us for a free CADDalog™ or for the name of your local dealer: 1-800-228-3601.

NEW BLAISE TOOLS

The fastest way to create powerful programs with Turbo Pascal 5.0 and Turbo C 2.0!

Blaise Computing, manufacturer of function libraries that offer easy-to-use solutions to your programming needs, introduces:

POWER TOOLS PLUS/5.0—\$149

—completely integrated and lightning-fast routines to help you:

- ◆ Add moving bar pull-down menus and windows to your user interfaces; NEW! ◆ Generate context-sensitive help screens; NEW! ◆ Add easy-to-use date and time conversion routines; NEW! ◆ Let users choose from window-oriented pick lists; NEW! ◆ Create and access "huge" data structures; NEW! ◆ Use multiple-line edit fields with fully configurable edit keys; NEW! ◆ Speed up your sorting with flexible in-memory sort routines; NEW!
- ◆ Add EMS support; NEW! ◆ Write TSRs and ISRs easily; ◆ Control DOS memory allocation;
- ◆ Create powerful programs in Turbo Pascal 4.0 & 5.0!

Turbo C TOOLS/2.0—\$149

—light, fast, high quality functions to help you:

- ◆ Add easy-to-use mouse support for windows and menus; NEW! ◆ Quickly include virtual windows and menus; NEW! ◆ Integrate your windows and menus with Turbo C's text windows; NEW! ◆ Create context-sensitive help screens; NEW! ◆ Provide multiple-line edit fields with fully configurable edit keys; NEW! ◆ Use keyboard and video services (including enhanced keyboard and VGA); NEW!
- ◆ Write TSRs and ISRs easily; ◆ Create powerful programs in Turbo C 1.0, 1.5 and 2.0!

FREE with these products!

Source code, complete sample programs, a comprehensive reference manual with extensive examples, the Norton Guides Instant Access Program, and an online database. We also offer free technical support and a bulletin board system dedicated to technical issues.

Unleash your programming potential!

Blaise Computing offers programming tools that are fast, flexible and affordable. Call now to order or to ask for a free brochure on our full line of products for C and Pascal.

Put Blaise tools to the test!

If at any time during the first 30 days you are not completely satisfied with their speed and flexibility, we'll refund your money.

Call 800-333-8087 today!

Partial volume label

Linear byte address of free extended memory

Figure 4: Above is a hex dump of the first 64 bytes of the memory occupied by the PC-DOS 3.3 VDISK driver. The base address of the driver was found by inspecting the interrupt 19h vector, which (in this instance) contained the address 1BF3:008Eh. In this particular version of VDISK, the 24-bit linear address of the first byte of free extended memory (110000h) is found in offsets 002Ch through 002Eh.

VDISK in Extended Memory

Indicates not bootable

OEM identity field

	0	1	2	3	4	5	6	7	8	9	A	B	C	D	E	F
100000	00	00	00	56	44	49	53	4B	33	2E	33	80	00	01	01	00
100010	01	40	00	00	02	FE	06	00	08	00	01	00	00	00	04	04

BPB

Start of free extended memory
(in kilobytes)

Figure 5: This hex dump shows the first 64 bytes of extended memory after the PC-DOS 3.3 VDISK driver is loaded. This memory section is set up to simulate the "boot block" of a normal DOS disk device, and so contains an "OEM Identity Field" in offsets 03h-0Ah and a valid BIOS Parameter Block (BPB) in offsets 0Bh-1Dh. The bytes at offsets 1Eh and 1Fh hold the address of the first free extended memory: 0440h (1,088K) in this example.

memory. Figure 5 contains a hex dump of addresses 100000h through 10003Fh, which are the 64 bytes beginning at the 1MB boundary. This memory is part of the first logical sector of VDISK's RAMdisk storage, so VDISK makes it look like the boot sector of a normal DOS block device. Offsets 00h-02h contain zero, showing that the disk is not bootable; bytes 03h-0Ah are the "OEM identity field" and contain the string "VDISK3.3"; and bytes 0Bh-1Dh are the "BIOS Parameter

Block" (BPB), from which DOS can calculate the locations of the FAT, the root directory, and so on.

The 2 bytes at offset 01Eh and 1Fh are what we want to see. If you look at the source code for VDISK, you'll find that these 2 bytes are treated as a word field and that they contain the address (in kilobytes) of the first free extended memory. In this particular case, the word contains 0440h (1,088K), which is again 1MB (1,024K) + 64K.

PC Magazine, Jan. 31, 1989, awarded Northgate's 286/12SM system its highly respected...

**EDITOR'S
CHOICE**

PC Magazine said:

"Speed by design: it's clear that Northgate Computer Systems values quality for the dollar with an emphasis on speed. The hardware and software components used in the Northgate 286/12 are chosen to give the most pep for the fewest dollars.

While the 286/12 is not the least-expensive fully configured system in this series, it simply gives more of everything."

THEN PC MAGAZINE CONCLUDED:

"If you want a system designed with performance and expansion as top priorities, consider this system seriously."

THE NORTHGATE PROMISE...

100% Customer Satisfaction!

That's the BEST reason Northgate's 286/12SM complete system deserves Your Choice as your next computer!

Unpack the carton, plug it together. Turn it on. The already formatted hard drive purrs. Up pops the C prompt. Type DIR. Zip. Files fly by so fast you have to freeze the screen to read them.

Then you notice...68 megs or more of RLL hard disk storage. No partitions either. Northgate gives you MS-DOS 4.01 with this system. Most others don't even include DOS. They charge extra, including Dell.

Now...take it for a test drive. Load your programs. Finished so fast? Run i-2-3. Try a re-calc. You hardly get your finger off the Enter key before it's done. *You don't know what fast is 'til you've run this baby.*

And the 286/12SM exudes quality. No cheap, old fashioned 12" monitor. Here's a high quality 14" graphics monitor, or even better, a true 16-bit (not 8-bit) VGA graphics

monitor puts 256 colors on the screen. *Simply magnificent.*

More quality: Wait until you discover data entry with Northgate's exclusive OmniKey. Crisp, positive entry. With the F keys on the LEFT WHERE THEY BELONG!

You can't buy OmniKey anywhere but Northgate! And it comes standard with all our systems.

Yes, you may pay a few dollars more for this system. But you know you're dealing in the Big Leagues with Northgate! *So if you're going to settle for less and buy at the lowest price, without concern for League Leading Performance, call the other guys!*

But if you want the 286/12 system that sets a new standard in the industry, backed by a company that just won't let you down, CALL NORTHGATE.

Complete System Price

\$2,199⁰⁰

Fully configured with 68 MB hard drive, 14" monitor, 1.2 MB and 1.44 MB floppy drives, OmniKey/102 keyboard AND MORE...

No lightweight this... full expansion capabilities, features and performance no other complete system can offer at the price

NORTHGATE PROUDLY ANNOUNCES...

Sorbus®

A Bell Atlantic™ Company Nationwide Independent Computer Service is now included at no extra cost to the owner—with every NORTHGATE COMPUTER SYSTEM.

**NORTHGATE

SYSTEMS, INC.**

PC
MAGAZINE
EDITOR'S CHOICE
FACT FILE

Northgate 286/12
Northgate Computer Systems
13895 Industrial Park Blvd., #110
Plymouth, MN 55441
(800) 548-1993
(612) 553-0111

List Price: With 1MB RAM, 67MB hard disk, 1.2MB 5¼-inch or 1.44MB 3½-inch floppy disk drive, monochrome card and monitor, DOS 3.3, \$1,995, with VGA card and monitor, \$2,599

In Short: Northgate handles high-performance systems. The competitively priced 286/12 combines hardware and software components to get the most from the 12-MHz, AT-Level architecture.

Other specifications and standard features that make this NORTHGATE "YOUR CHOICE":

- Processor—Intel 80286/12 (not a 101).
- Cabinet—Full size desktop case; control panel with system reset button, speed switch (8/12MHz), hard drive in-use light, 200-watt power supply.
- Hard Drive—Microscience 66MB, 28MS access time.
- Controller—16-bit, RLL, 1:1 interleave for 800,000 BPS data transfer.
- Famed OmniKey/102 keyboard—pick of the pros.
- Floppies—One 1.2MB 5¼ inch; one 1.44MB 3½ inch.
- Monitor—14" flatscreen, amber or white, 1000 line resolution capability.
- Video Adapter—Hercules compatible with parallel port.
- Software—Northgate MS-DOS 4.01 with GWBasic, hardbound covers; PCQuick hard drive caching; Northgate System and DOS on-line user's guide; Northgate Utilities.

All systems are custom configured and manufactured at our production facility in Plymouth, Minnesota. Approximately 80 percent of parts used in Northgate systems are made in the U.S.A.

Hard drive is factory-formatted (we can do this legally because we are a DOS licensee) and system can be unpacked and ready for operations on site in about 10 minutes. Full instructions (written and printed in English) are provided.

SYSTEM OPTIONS:

Display—16-bit VGA Greyscale, Analog

or Multisynch

Hard Drives—Up to 600MB, SCSI, ESDI, RLL (Northgate believes MFM drives are obsolete)

FINANCING:

Use the Northgate "Big N" revolving credit card instead of tying up VISA or MC credit. Millions in financing available, easy to qualify.

OR... Lease a Northgate with up to five-year terms. Ideal when cash flow is important. Phone for details.

Northgate and OmniKey are trademarks of Northgate Computer Systems, Inc. All other products that are trademarks or registered trademarks of their respective companies.

Northgate's proprietary motherboard—DESIGNED AND MADE IN THE U.S.A.— gives you a full 1MB of usable RAM. So you can use 384K for your applications. And system performance is unaffected. Now compare prices!

The 286/12SM board has serial and parallel ports built in. The board has two 8-bit and four 16-bit slots. A special memory board slot we call "Lightning Alley" runs at processor speed—12MHz—not 6 or 8 MHz as do others. That's as much as 100% faster!

One megabyte of RAM can be installed on the motherboard. Memory cards enable a total of 16MB to be installed in the system. Two floppies, too, so you can use 1.2 and 1.44MB diskettes, as well as 360's and 720's.

Let's talk differences and what makes Northgate a better value. Many systems have 1MB of RAM (including Dell, CompuAdd). BUT...only 640K is usable. The other 384K is "shadowed."

That means the system ROM and video ROM occupy the other 384K you paid for. Without your being able to use it! No RAMDISK! No Disk Caching! No Spoolers. And you can't use SmartDrive for Windows—want to see what S-L-O-W is? Try it.

Northgate performance is as good or better and gives you more for your money.

Phone Now...Let Northgate begin building your computers... Today!

PRODUCTIVITY

■ POWER PROGRAMMING

The responsibilities of a program you might write that uses the VDISK method for extended memory management are now a bit clearer. The program must first find the total amount of extended memory available by calling interrupt 15h function 88h. This will protect it against the programs that use the interrupt 15h management method. It must then inspect the interrupt 19h vector to find out whether the vector points to the base of an already-loaded VDISK driver.

If a VDISK driver is already resident, the new program must inspect both the fields within the driver itself and the boot block at the 1MB boundary, so as to determine the starting address of available extended memory. If these are inconsistent, your program should use the higher of the two. It must decide how much memory to reserve for itself and then update the two fields just mentioned to reflect that amount of "allocated" extended memory.

If no VDISK driver is present in the system, your program can take the easy way out: hook the interrupt 15h vector and use the interrupt 15h method of memory management. Alternatively, it can pretend that it is a VDISK by pointing the interrupt 19h vector to something that appears to be a VDISK driver header and by creating a phony boot block at 1MB. In either case, the program must also install its own Control-C (interrupt 23h) and critical-error (interrupt 24h) handlers so that it cannot be terminated unexpectedly.

Regardless of the allocation method used, your program must be careful to exit gracefully so that it removes all evidence of its presence and so that any extended memory it used is not orphaned. If the interrupt 15h vector was captured, that vector must be restored to point to the previous owner. If the VDISK indicators were modified, they must be returned to their proper state to "release" the memory. This can be quite tricky if another driver or TSR has allocated some extended memory to itself after your own application program.

With us, VGA stands for Very Good Alternative.

Products Refined For
The International Market

You don't have to pay top dollar to get VGA color technology in a monitor.

Not when there's an alternative with the world class quality of Samtron.

Our monitors are made in Korea, by Samsung Electron Devices. One of the largest monitor manufacturers in the world. But, while we make monitors in volume, we don't make them in every possible model.

Just the most popular ones, refined for the international market. Like the 14" Samtron VGA color monitor you see on the right.

That keeps the production runs high, the costs low.

It's how we've been the money-saving alternative for smart monitor buyers in the U.S. and around the world since 1978. (Our service is also worldwide.)

And it's why choosing a Samtron VGA monitor is as brilliant as the 256 colors you'll get.

Work Faster, Smarter and Cheaper. Guaranteed.

From the world's leading manufacturer of computer keyboards comes a small product that can make a big difference in your company's productivity: the Key Tronic Professional Series Mouse.

The Faster Way To Work.

Only the Professional Series Mouse comes with this custom pop-up menu software that allows you to speed your way through Lotus 1-2-3, WordPerfect 4.2 and 5.0, and dBASE III PLUS with point-and-click ease and precision.

Of course, the Professional Series Mouse also operates with literally hundreds of other software programs: from desktop publishing, to CAD, to graphics.

To receive your \$10 check from Key Tronic*, please complete the following information and mail (postmarked by July 15, 1989) with a *copy of your dated sales receipt* to Key Tronic at MS #143 • P.O. Box 14687 • Spokane, WA 99214.

The Editor's Choice Is The Smart Choice.

Great care went into the design and engineering of the Professional Series Mouse. In fact, *PC MAGAZINE* had many flattering things to say in its February 14, 1989, issue (page 252), when it issued the Editor's Choice Award

to the Professional Series Mouse. "Well designed, carefully documented, and an exceptional value" was how that publication summed it up.

The Price Is Right.

The Professional Series Mouse lists for \$109—a remarkable price considering the menuing software and numerous performance features which are included.

And if you purchase a Key Tronic Professional Series Mouse before June 30, 1989, you can earn a \$10 rebate. Simply fill out the coupon below, attach a copy of your sales receipt, and mail both to the address indicated. Key Tronic will mail you a check.

Your Satisfaction Is Guaranteed.

If you're not 100% satisfied with the Professional Series Mouse, you can return it to Key Tronic Corporation for a replacement or a full refund!

So ask your computer equipment dealer for a Key Tronic Professional Series Mouse by name. It's the guaranteed way to work faster, smarter and cheaper!

SPREADSHEET CLINIC

Protecting your 1-2-3 worksheets from prying eyes; determining the median of a range of values; a 1-2-3 macro for replacing the value in a cell with a value calculated from it.

Replacing the value in a cell with a value calculated from it

In many of my 1-2-3 macros I need to replace the value in a cell with the result of a formula or function that uses that value. To do this, I move the cell pointer to that cell and invoke a macro routine like the one shown below:

```
{Edit}operation{Calc}-
```

where *operation* specifies the operation I want to perform on that value. The {Calc} instruction recalculates the formula while it is still on the Edit line, replacing that formula with its result. The tilde (~) command hits Enter, locking the new value into the current cell and overwriting the previous value. Thus, the routine

```
{Edit}*2{Calc}-
```

doubles the value in the current cell.

An alternative routine to accomplish the same doubling in the Point mode is

```
{Edit}+(Down){Up}X{B5}{Calc}-
```

The {Down} and {Up} commands put 1-2-3 into the Point mode, and point to the current cell. If the cell pointer was on A1, for example, and that cell contained the value 123, the formula 123+A1 would be displayed on the Edit line at this point.

Unfortunately, 1-2-3 does not allow you to calculate a formula on the Edit line while it is in the Point mode. To return to the Edit mode, therefore, the macro types a dummy character (in this case, X) and presses the Backspace key to erase it. The

macro can then recalculate the formula and place the result—double the original value—into the current cell.—Neil G. Gardner; Huntington Woods, Michigan

Mr. Gardner's method is the best way we know to replace the value in a cell from within a 1-2-3, Release 1A, macro. If you use a later release of 1-2-3, however, a {Let} statement is the method of choice. For example, to double the value in cell B5 of a 1-2-3, Release 2 or 2.01, worksheet, you would use either the statement

```
{Let B5,B5*2}
```

or

```
{Let B5,B5+B5}
```

Unlike Mr. Gardner's method, this does not require moving the cell pointer to the cell whose value you want to alter.

If you want to modify the value in the current cell, use a calculated {Let} statement. For example, the routine shown in Figure 1 doubles the value in the current cell of a 1-2-3, Release 2 or 2.01, worksheet. The command in cell B1 instructs 1-2-3 to recalculate the string formula

```
B2: **{Let **@CELLPOINTER("address")  
A",@CELLPOINTER("contents")*2}
```

The result of this formula will be a valid {Let} statement that commands 1-2-3 to enter the result of the function

```
@CELLPOINTER("contents")*2
```

into the current cell. For example, the formula in cell B2 would return the string

```
{Let $B$5,@CELLPOINTER("contents")*2}
```

if the cell pointer was on cell B5 when you invoked this macro. This statement would double the value in cell B5.

Here's a way to determine the median of a range of values

While working in Lotus 1-2-3, I often need to determine the median of a list of values. For an odd number of entries, the median is simply the middle value when the range has been sorted in ascending or descending order. For an even number of values, the median must be calculated by adding the two middle values and dividing by 2.

Unfortunately, 1-2-3 does not have an @MEDIAN function that will do the work for you. Consequently, after sorting the values in the range into ascending or descending order in a single column, I apply

	A	B	C	D	E	F
1	\d	{Recalc NEXT}				
2	NEXT	{Let \$B\$2,@CELLPOINTER("contents")*2}				
3						

Figure 1: This 1-2-3, Release 2 or 2.01, macro routine uses a calculated {Let} statement to double the value in the current cell of your worksheet.

■ SPREADSHEET CLINIC

a formula in the form

```
=IF(MOD(ROWS(RANGE),2)=1,
INDEX(RANGE,0,INT(ROWS(RANGE)/2)),
(INDEX(RANGE,0,(ROWS(RANGE)/2)-1)
+INDEX(RANGE,0,ROWS(RANGE)/2))/2)
```

In applying the formula, you simply replace the *range* with the actual address (B1..B10, for example) of the desired range.

Here's how the formula works. The conditional test of the @IF function, @MOD(@ROWS(range),2)=1, determines whether the list contains an even or odd number of values. If there is an odd number of values in the list, 1-2-3 uses the function

```
@INDEX(range,0,INT(ROWS(range)/2))
```

to calculate the median. This function returns the middle value from the range. The value 0 tells 1-2-3 to look in the first (and only) column in the range; the argument @INT(ROWS(range)/2) identifies the middle row, whose value will be returned by the @INDEX function.

If the range contains an even number of values, 1-2-3 will use the formula

```
(INDEX(range,0,(ROWS(range)/2)-1)
+INDEX(range,0,ROWS(range)/2))/2)
```

to calculate the median. This formula adds

the two middle values in the list and divides by 2. The result is the median.—Jordan Engel; Washington, D.C.

Mr. Engel's formula certainly works well, but it is a bit difficult to enter the addresses repeatedly. Consequently, we suggest that, in addition to sorting the range of values, you assign the name *RANGE* to that range. Then, you can use the macro shown in Figure 2 to calculate the median. This macro types the formula

```
=IF(MOD(ROWS(range),2)=1,
INDEX(range,0,INT(ROWS(range)/2)),
(INDEX(range,0,(ROWS(range)/2)-1)
+INDEX(range,0,ROWS(range)/2))/2)
```

onto the Edit line, recalculates it, and then enters the result—the median—into the current cell.

If you wish to automate the entire process, you can use the macro shown in Figure 3. This macro inserts a new column to the left of the one that contains the values you want to sort, copies those values (or, if any of the cells in the range contain formulas or functions) into the new column. Then, 1-2-3 sorts the copied values and uses the @IF formula shown above to calculate the median. Then, 1-2-3 returns the worksheet to its original condition.

Password protection to blank your screen from prying eyes

While working with a sensitive 1-2-3 worksheet, you may not want to leave it on-screen when you step away from your desk. You can always save it, erase it, and then retrieve it when you return, but if the worksheet is large, this can waste time that you may not be able to spare.

Fortunately, there is a way to prevent people from viewing and working with a worksheet—without requiring you to remove it from RAM. Simply by invoking the macro shown in Figure 4, you can blank the screen of your computer.

The macro uses file I/O commands to write information to the screen of your computer rather than to a file. A special ANSI escape sequence within a {Write} command blanks the screen. Before doing so, 1-2-3 asks you to supply and confirm a password. Once 1-2-3 blanks the screen, it won't redisplay the worksheet until you re-type the correct password.—Frank Johnson; Minneapolis, Minnesota

The macro Mr. Johnson has created makes use of a technique we discussed in the December 27, 1988, issue's Spreadsheet Clinic. We explained there that if you specify the DOS device name CON as the argument of an {Open} command, 1-2-3 will send the information specified by subsequent {Write} commands to the screen of your computer rather than to a file. In addition to sending text to the screen, you can send escape sequences that move the cursor, invoke various attributes, and erase characters. The four-character sequence, ESC[2J, blanks the entire screen and is the key to this macro.

In order to understand the escape sequences sent to it, your computer must read ANSI.SYS when it boots. Thus, a copy of ANSI.SYS must be located in the root directory of the disk with which you boot your machine. That directory also must contain CONFIG.SYS, which must contain the statement device=ansi.sys.

Normally, 1-2-3 translates character 27 (the escape character) into character 32 (the space character) when a {Write} command instructs it to export that character. Since the ESC character is an integral part

9		{Branch INPUT}					
10							
11		PASSWORD					
12		CONFIRM					
13		RESPONSE					
14							

Figure 4: This 1-2-3 macro blanks your screen until you retype a password.

of the sequence needed to blank the screen, you must instruct 1-2-3 not to translate that character. To do this, you must alter the character-translation table within the .SET file you use to load 1-2-3. To learn to alter this file, see the December 27, 1988, issue's Spreadsheet Clinic.

The first statement in Mr. Johnson's screen-blanking macro tells 1-2-3 to display the prompt Specify Password: at the top of the screen and wait for your reply. Type the password you'll want to use later to unblank the screen. When you press Enter, 1-2-3 stores this in the cell named PASSWORD (B11). The statement in cell B2 then asks you to retype the password. Pressing Enter locks your response into the cell named CONFIRM (B12).

The statement at the beginning of cell B3 compares your responses with the two {GetLabel} commands. If you did not type exactly the same response to the second {GetLabel} statement, this statement will be true, and 1-2-3 will execute the {Branch} command at the end of cell B3. This routes the execution of the macro back to the cell named \b (B1), which in turn allows you to respecify the password.

If you retype the correct password, 1-2-3 executes the {BreakOff} command in cell B4. This disables the {Break} key, preventing anyone from canceling the execution of the macro by pressing Ctrl-Break.

The '{Open CON,W}' statement then opens the screen for access by 1-2-3's {Write} command. The next statement sends out the four characters [ESC], [1, 2, and J. When interpreted by ANSI.SYS, this sequence blanks the screen.

As soon as 1-2-3 blanks the screen, it

executes the statement in cell B7, which writes the Password? prompt at the upper-left corner of the screen and waits for your reply. It also redraws the first and last lines, leaving the rest of the screen blank.

When you get back to your desk, you simply type in your password and hit Enter, which locks your response into the cell named RESPONSE. The {If} statement at the beginning of cell B8 then executes, and if your response exactly matches the label stored in PASSWORD (including capitalization), 1-2-3 continues with the remainder of the commands in cell B8. The first of these commands, ", redraws the screen, revealing the same image that was on the screen before the macro blanked the screen. The next command, {Quit}, cancels the execution of the macro.

If your response does not match the password, 1-2-3 will skip those commands, executing the statement in cell B9 instead. This statement routes the execution of the macro back to cell B7, which asks you for the password again. 1-2-3 will continue in this loop until you supply the correct password or reboot your computer.

Mail contributions to Spreadsheet Clinic, PC Magazine, One Park Avenue, New York, NY 10016 or upload them to PC MagNet (to join, see the "By Modem" sidebar in the Utilities section).

■ NEIL J. RUBENKING

USER-TO-USER

Patch COMMAND.COM to delete files with confidence; a simple batch file that compares the contents of two directories; a method for recovering files with ease.

Comparing the contents of two directories with COMP

When comparing two groups of files in different directories, COMP checks to see only that all of the files in the first directory are present in the second directory. Files that exist in the second directory but not in the first are not noted in any way.

REALCOMP.BAT, shown in Figure 1, performs the COMP twice, reversing the order of the directories the second time, and stores the results of both comparisons in a temporary file. The file is then typed through a filter that removes all of the successful comparisons. The file ANSWER.NO, which is directed into the COMP commands, consists of an n, a carriage return, and a Ctrl-Z End-of-File marker. Its full pathname must be included.

I would like to know if you have a method for suppressing the "Compare more files (Y/N)?" message that the batch file displays. I couldn't figure out a way to pipe the output of the comparisons to the temporary file and still use the technique of piping the output to NUL in order to suppress the message.—Barton A. Gravatt; Homer, New York

This file isn't using the ability of COMP to compare files—it's just using it to check for their presence. The resulting list contains the full path of any file that appears in only one of the two directories. The comparison of files that *do* appear in both directories gets filtered out.

```
ECHO OFF
IF %1==. GOTO ERROR
IF %2==. GOTO ERROR
COMP %1 %2 > STOPGAP.FIL < ANSWER.NO
COMP %2 %1 >> STOPGAP.FIL < ANSWER.NO
CLS
TYPE STOPGAP.FIL | FIND "File not found"
ECHO.
DEL STOPGAP.FIL
GOTO END
:ERROR
ECHO.
ECHO You must include two pathnames. Press any key to continue.
ECHO.
PAUSE > NUL
:END
```

Figure 1: REALCOMP.BAT produces a list of files that appear in one of the two directories.

The ANSWER.NO file isn't really necessary. You can get the same effect by piping an N to the COMP command, for example,

```
ECHO N | COMP %1 %2 > STOPGAP.FIL
```

But avoiding the "Compare more files" question is more difficult. COMP writes that message to the standard error device, not to standard output. As a result, even CTTY NUL won't hide it. There are utilities that will redirect standard error, but I prefer to just put a CLS after the unwanted screen output. I've added that CLS in REALCOMP.BAT.

A simple deletion technique that makes it easy to recover your files

While lacking a file unerase utility, I needed a way to make accidentally deleted files recoverable. DOS provides no easy way to

recover the files it deletes. So I created two batch files: DE.BAT "deletes" files and UNDE.BAT recovers the last file you deleted.

DE.BAT is shown in Figure 2 and uses the same syntax as DOS's DEL command, including wildcards. However, it does not actually delete files. Instead it moves them to a temporary subdirectory named TRASH on RAMdisk drive D:. This way, if you change your mind, you can recover these files from this subdirectory as long as your computer has not been shut off or rebooted. You must create this directory before using this file.

The error message "Deletion halted . . ." in line 18 warns you that there is no TRASH subdirectory, the RAMdisk is out of room, or there is no RAMdisk installed. It will give you a chance to exit before the file is permanently deleted.

UNDE.BAT in Figure 3 is a quick way to retrieve the last deleted file to your cur-

Do You Believe Software Can Make A Computer Faster?

The Editors Do!

Based on outstanding performance improvement provided by Multisoft's products, PC Magazine awarded on Editor's Choice in the February 14, 1989 issue.

EDITOR'S
CHOICE

• Super PC-Kwik

Speed is the only reason to use a disk cache, but speed isn't the only criterion to use in choosing one. The best cache program is the one that speeds up disk activity while occupying the least DOS memory and adapting to the special requirements of your work and your computer.

Super PC-Kwik is the fastest cache program available, and it's also the one with the most useful and sensible options. You can squeeze it down to as little as 9K of RAM and still maintain a half-megabyte cache in expanded memory. You can also benefit from its speed and intelligence if you keep the cache in conventional or extended memory.

When you combine it with the RAMdisk, print spooler, and other programs in Multisoft's PC-Kwik Power Pak, Super PC-Kwik makes better use of your memory than any other cache you can buy.

Order Super PC-Kwik today and see what the industry's best disk cache can do for you, or get the most for your money with our 5-in-1 Power Pak.

Super PC-Kwik \$79⁹⁵

Power Pak \$129⁹⁵

```

Figure 2: Instead of deleting files, DE.BAT moves them to the TRASH subdirectory. You can recover a file as long as your machine hasn't been turned off or rebooted.

rent directory. The syntax is just

UNDE

that is, the batch file's name. Both of these files can be easily modified and expanded to handle various deleting jobs. —Jim Chong; Niagara Falls, Ontario, Canada

This idea lends itself to variations. If you have enough space on your hard disk, put the TRASH directory right on your disk. This will give you the ability to "unerase" a file even if you've turned off your computer since the time you "erased" it. Of course, you'll have to empty the TRASH from time to time.

To save space, you might use a file compression program such as ARC from Software Enhancement Associates or PKARC from PKWare. Instead of copying the file to the TRASH directory, add it to

the TRASH archive.

Unlike the DEL command, DE.BAT doesn't work with pathnames. If you pass it a filespec that includes a pathname (C:\DATA\JUNK, for example), it will report that the file did not get copied to the TRASH directory. That's because the fifth line will test for the existence of D:\TRASH\C:\DATA\JUNK—a mess. Use DE.BAT only on files in the current directory.

The author states that DE.BAT works with wildcards. It does, but there's a danger. Suppose you use DE on the filespec *.BAK. Suppose further that the TRASH directory has room for only one more file. The first *.BAK file gets copied, but none of the others do. Now the fifth line tests for a successful copy by checking the existence of D:\TRASH*.BAK. One matching file is enough to prove existence, so DE merrily deletes all of the *.BAK files, leaving only one of them unerased.

If you want to use DE safely with wildcards, there is a way. Rename the existing file to DEI.BAT, and create a new DE.BAT with these lines:

```

@ECHO OFF
FOR %* IN (*) DO CALL DEI.BAT %*
  
```

Now DEI.BAT acts on each matching file individually, so there's no possibility of problems due to wildcards. If your DOS

```

@ECHO OFF
IF NOT EXIST D:\TRASH\%1 GOTO Err
COPY D:\TRASH\%1 D:\TRASH\%1 > NUL
ECHO Last Deleted File = %1
ECHO Recovered in
CD
GOTO End
:Err
ECHO File D:\TRASH\%1 not found
:End
set LDF=
  
```

Figure 3: UNDE.BAT retrieves the last file you put in the TRASH.

Tandy® Computers: The broadest line of PCs in America.

The Tandy 3000 NL

Affordable 286
power and
remarkable
expansion.

The Tandy 3000 NL is the right choice for your growing business. From the outset, you'll have an Intel® 80286-based system clocked at 10 MHz. You'll have the performance to manage productivity applications more effectively under MS-DOS®, and the potential for multitasking under MS® OS/2.

Now take on tomorrow: outfit the 3000 NL with a second 3½" drive, and you still have room for two front-panel 5¼" drives—floppy or hard disk, tape or disk cartridge. Custom configure your system using seven expansion slots. Add an 80287 math coprocessor. Expand the memory to up to 16MB.

And with the 10 MHz bus design, the 3000 NL can transfer data across a network at high speeds. Our 3Com® workgroup lets your people and PCs work together, so your entire office can share information and route messages—electronically. And with IRLMAN™, up to 32 people in your workgroup can access your company's IBM® mainframe computer. We can provide the workgroup solution to meet your needs.

Radio Shack Computer Centers offer the most comprehensive range of support services in the industry to maximize your investment. The bottom line? We work hard for your business.

The new-generation Tandy 3000 NL. From the best-selling family of PC Compatibles made in America.

Right Now. Guaranteed!*

Yes, we can ship your new ZEOS™ 286 or 386 today! We've built up an extra supply of the hottest selling computers in America. The celebrated ZEOS 286-12 and PC Magazine's Editors Choice—the ultra fast ZEOS 386-16.

Take your pick now for immediate delivery. These are both *complete*, genuine ZEOS Zero-Wait state systems. Both include an ultra-fast Seagate hard drive and all the other goodies. And they're ready to ship. *Right Now.*

Here's how it works. We have these extra systems pre-built and ready to ship. They include both High Resolution Monochrome and VGA systems. While supplies last, we will ship either of these systems to you *the day you order* subject to these conditions:

1. Your order must be received by 1PM Central Time.
2. Credit Cards are subject to credit card authorization.
3. Orders must be for our standard 286-12MHz system or 386-16MHz system, either monochrome or VGA. Any other systems or upgrades are custom built and will take slightly longer.

****Our Guarantee to You:***

If we fail to ship your system under the conditions outlined, we will ship it *at our expense* as soon as it is ready. All systems are fully burned in and tested. Each system includes our 30 day Money Back Guarantee and One Full Year Limited Warranty. *Toll Free* technical support and Express Parts Replacement are included too!

This offer is good only as long as these pre-built

Comput

**Complete ZEOS 12MHz 286
with 32MB Hard Drive!**

Only \$1,395

For VGA color add \$595

Standard Features Include:

- 80286-12 CPU, 6/12MHz Dual Speed keyboard/hardware selectable. Reset and Turbo buttons right up front.
- Zero-Wait State DRAM, 512K expandable to 4MB on the mother board (16MB System Total). EMS Capability on board.
- Fast 32MB Seagate 138R Hard Drive with auto-park, 1.2MB Floppy Drive.
- Ultra high speed Hard/Floppy controller. EI interleave, 800 KB/sec transfer rate.
- Genuine Hercules® (Yes, Hercules!) Brand graphics card. High-Res Amber Display with Tilt/Swivel Base.

Performance Comparisons using PC Labs Benchmark Series Release 4:

	NOP	80286 Instruction Mix	Floating Point Calculation	Conventional Memory
ZEOS 286/12 Desktop	2.81	4.78	18.84	0.72
IBM PC AT (8MHz)	4.23	8.96	35.60	1.32
IBM PS/2 Model 50	-3.3%	2.20	28.34	1.05

- ZEOS Enhanced 101 Key Keyboard with our Pleasant Tactile/Click Feel.
- Serial and Parallel Printer Ports.
- Clock/Calendar with Battery Backup.
- 6-16 and 2-8 bit expansion slots.
- 80287 support, up to 12 MHz.
- Heavy Duty Case Complete with Security Lock and LED indicators.

FREE Shareware Disks Too!
25 Software Programs Included
Every system will include 5 ready to run Shareware programs on free disks. Included are programs for Word Processing, Spread Sheets, Educational, Financial, Business, Games and more. With Shareware you can try the programs first before you register them with the author. What a great idea!

systems remain in stock; please give us a call to verify availability. This offer does not apply to other ZEOS systems or custom configurations.

Immediate shipment is only part of the story.

ZEOS builds Rock Solid computers. That's why we offer you our 30 Day Money Back Guarantee, Toll Free technical support and Full One Year Limited Warranty. Compare that to the others. Then compare performance.

Performance is what ZEOS is all about. If you're buying a computer you may as well buy the fastest. The ZEOS 286-12 is *the fastest* in its class. It features true Zero-Wait state operation with speeds close to many 386 systems!

Or select the ZEOS 386-16. The Editors of *PC Magazine* did. In fact they selected the ZEOS 386 as

Editors Choice. And is it ever a screamer. As the *PC Magazine* said, "This ZEOS 386-16 blows away every other computer..." Another *PC Magazine* editor said "Don't pass up the ZEOS... solid construction, flexible design and escape-velocity performance make it a top flight choice."

PC Resource Magazine put it this way "ZEOS... provides quality comparable with the IBM or Compaq and does so for about 70% of the cost." *Personal Computing* simply says "The best value we've come across so far."

We couldn't have said it better ourselves.

And these are the machines that we have ready to ship to you *right now*. Rock solid block buster ZEOS machines with quality and performance that is, in a word, *Guaranteed*. Order now by calling 800-432-5891.

ers Now!

Complete ZEOS 16MHz 386 with 80MB 28ms SCSI Drive!

Only \$2,495

■ USER-TO-USER

version is earlier than 3.3, you'll have to use COMMAND/C in place of the CALL statement. This creates a problem for UNDE.BAT—the LDF environment variable gets set within a secondary command processor and disappears as soon as DEI .BAT ends. If you want to use the "safe" DE.BAT with any DOS version earlier than 3.3, all you have to do is edit UNDE .BAT and replace the references to %LDF% with %1. Your new UNDE.BAT will require a command line parameter to tell it which file to undelete.

Productivity Tip

All of the Extended ASCII characters (those with ASCII values greater than 128) are available for your use when naming files. Because you have to enter them by pressing Alt and typing on the numeric keypad, you don't want to use them often.

However, for special files consider using names that are difficult to enter, like $\alpha\beta$.DAT.

Add this verify feature to make sure you don't delete the wrong files

Being a veteran CP/M user, I'm used to having my computer display all files pending to be deleted, then prompting if it should continue. Below is a sample of how it worked:

```
CP/MERA *.BAK
LETTER BAK | BACKUP BAK | STARTER BAK
MEMO BAK | MODENIO BAK | STICORE BAK
OK?
```

As you can see, the files pending to be deleted were displayed, and then the system would prompt if it was OK for you to continue. An answer of Y would cause the files to be deleted, and an answer of N

would abort the operation.

This verification saved me from accidentally deleting files many times. Now, however, I use an MS-DOS computer. Too often I have deleted all my .BAT files from a directory when I wished to delete the .BAK files. If a directory of files pending to be deleted had been displayed, I would have discovered my typo. So I devised a way to visually verify my files before I delete them.

First, create the small batch file DEL .BAT, shown in Figure 4, and place it in a directory where it can be accessed from any drive or directory within your system (via the PATH command).

Next, make sure you have DEBUG .COM available. Then go to your root directory and make a copy of your COMMAND.COM program, giving it another name such as COMMAND.BAK. This will give you a backup of COMMAND .COM in case the original gets corrupted

Webster's defines form as ...

"to think of; frame in the mind; conceive ... create out of separate elements ... assume shape."

Indigo Software defines JetForm as ...

"doing all of the above creatively, efficiently and inexpensively."

What can you expect from the most powerful, flexible competitively-priced electronic forms product on the market?

- **Power:** to take full advantage of PC interactive graphics design capabilities and the latest in laser printing technology.
- **Flexibility:** to create electronic forms that meet all your forms requirements — from single-page expense claims to multi-page insurance policies.
- **Design:** to watch your form as it takes shape and use a host of built-in design features.
- **Speed:** to cut your forms design and print time to a fraction, with no compromise to the end product.

Is What You See Really What You Get?

With JetForm, yes! JetForm makes the creation process easy. As your form takes shape on the screen, you know it will look the same when it comes out of your laser printer.

A Brand New Resolution The Handy Scanner HS-3000

Desktop publishing has never been easier! With the new Handy Scanner® 3000, you can easily add graphics to your documents. Additional software is also available for rapid text entry.

The Handy Scanner 3000 is the first hand-held scanner to offer four (100–400 dpi) resolutions for the IBM PC/XT/AT, PS/2 Models 25/30, 50/60, and their compatibles. You can scan images 4 1/8" wide and up to 20" long. The scanner has unique features such as 32 levels of grey resolution for crisp clear images, a fast 7-sec. speed for 10" scans at 300 dpi, and a yellow-green light that captures the reddish skin tones of your images (scanners with red lights just can't see the all-important skin tones). What's more, a real-time screen lets you instantly see your scanned images, so you can quickly make adjustments if needed.

With its accompanying software, you can quickly scan, bit-edit, crop, save and use the images in virtually all graphics packages, including PageMaker, Ventura, WordPerfect 5.0, PC Paintbrush+, First Publisher and Byline.

If you need a quick, easy way to enter text for word processing, you can use our optional OCR software. You can scan monospaced or typeset text from typewriters, dot matrix and laser printers and books. The trainable text reading software automatically and seamlessly merges two halves of a page together.

The Handy Scanner 3000 package includes the scanner, interface card, Scan software, and a leading paint program.

The Handy Scanner 3000 from DFI—call now for more information and literature.

while making these changes. Now enter

DEBUG COMMAND.COM

DEBUG will load **COMMAND.COM** into memory, where you can modify it.

MS-DOS must be forced to use the DEL batch file instead of the internal DEL command. You can do this by changing the uppercase D in DEL to a lowercase d so the command interpreter won't be able to find

it. Instruct DEBUG to find the DEL command by entering

S CS:FFFF "DEL"

at the - (hyphen) prompt. DEBUG will return with an address where it found the search text of DEL. Now enter the following command:

E #####:#### "d"

where #####:#### is the address that the previous search command returned. Verify that all has gone well by using the Dump command and by entering

D #####:####

where #####:#### is again the address given to us by the search command. The Dump command causes DEBUG to display a section of memory starting at the address given. Viewing the right-hand portion of the screen, you should see the DEL command with a lowercase d, and an up-

```
@ECHO OFF
IF "%1"==" " GOTO NoParam
ECHO The following files will be deleted:
DIR/W %1
ECHO .
ECHO Press Ctrl-C to abort, or
PAUSE
ERASE %1
GOTO End
:NoParam
REM This is the message the internal DEL gives!
ECHO Invalid number of parameters
:End
```

Figure 4: This batch file must be accessible from any drive or directory within your system. In order to make DEL.BAT replace the internal DEL command, you must make DEL unrecognizable by patching COMMAND.COM itself.

80386 CACHE

25 MHZ MOTHER BOARD WITH 80387 WEITEK

SPECIFICATION:

Intel 80386-25 CPU
One 32 bit memory bus, supports 1M to 64M bytes of memory
Provides 32K 2 way set associated cache (Expandable to 64K)
Fully AT compatible
Standard AT size
Turbo switch/Turbo Light
Software speed change:
3.06 25 MHZ/AT 16/AT 12/AT 10/AT 8
Supports 25 MHZ 80387
Supports WEITEK coprocessor
Supports RAM/DO, Shadow RAM
5 AT slot, plus 2 XT slots
7 channels of DMA, 16 levels of interrupt
DOS and OS/2 compatible
UNIX, AENX compatible

Is your disk drive filling up? Make it BIGGER for only \$99!

- ▶ Easy installation
- ▶ Works with any disk drive
- ▶ Automatic, transparent operation
- ▶ Ideal for word-processing, spreadsheet, and database files

diskdoublerr II
The 1988 Top 10

"Board Level Products"
—Computer Products Magazine

Compresses and decompresses data files automatically

DiskDoublerr II works automatically and transparently on all your data files — text, database, and spreadsheet. It compresses them by up to 50% every time you save to disk, and decompresses them when your program reads them off the disk. No special commands are needed: you use all your programs just the same as always and gain valuable disk space effortlessly.

High-speed, reliable operation

DiskDoublerr II features a unique high-speed data-compression chip that does all the work, so in most cases you won't even know it's there. Its new surface-mount design offers the reliability your valuable data deserves, at an amazingly low cost.

Works with any disk drive

DiskDoublerr II can work with any or all of the disk drives in your system: floppy, hard (including SCSI, ESDI, cards, and even RLL), RAM, Bernoulli, even WORM optical drives! DiskDoublerr II does not modify DOS disk or file structure in any way.

Easily installed

DiskDoublerr II installs in minutes in any 8- or 16-bit slot of any true PC-compatible — no cables, no connectors, no reformatting. Just plug it in and go! Its universal mounting bracket eliminates the tight fit sometimes caused by non-standard clone hardware.

Satisfaction guaranteed

All Datran products have a 30-day money back guarantee and DiskDoublerr II has a 3-year limited warranty.

turboCom

- Super-fast PC-to-PC communications
- Easy command-line operation
- Works in batch files
- Sends and receives files unattended
- Includes 2 manuals, a 5¼" and a 3½" disk

TurboCom 3.0 has no complex menus or commands to learn — it's as easy to use as the DOS copy command! TurboCom 3.0 can save you up to 75% on your data-transmission costs, and you can even use it in batch files to send and receive files automatically.

■ USER-TO-USER

percase EL. If you do, enter

W

to write the changes to disk. If you don't see DEL displayed thus, skip this command and exit DEBUG by entering

Q

After you've written the changes to disk, reboot your machine. The new command should be operational. When you enter

DEL filespec

the DEL.BAT file will be invoked. It first displays a directory of the filespec and pauses until the operator presses any key to continue, or Ctrl-C to abort.

Note that COMMAND.COM's ERASE command can still be used to delete without verification, if for some reason this is desired (possibly by other batch files, just like our DEL.BAT file!).

—Allen Howell; Arcanum, Ohio

Always make a backup before meddling with COMMAND.COM, and be prepared to reboot from a floppy disk if you make a mistake. However, naming your backup copy COMMAND.BAK seems unsafe to me, since I frequently delete every *.BAK

■ You can "patch out" other DOS commands, to replace them with batch files or to disable them.

file. I would suggest something different, like COMMAND.SAV, and make it Read-Only.

You can "patch out" other DOS commands, either to replace them with same-

named batch files or simply to disable them. However, a patched COMMAND.COM makes your system nonstandard. If anyone else has to use your system, he may be unpleasantly surprised by the difference. To use the batch file described here without patching COMMAND.COM, just give it a name that's not a built-in DOS command, like DELL.BAT.

Share Your Secrets

Reveal your latest DOS and systems discoveries through User-to-User. We'll pay \$50 or more for any submissions we print, *plus an extra \$25 if you send your letter on-disk*. If you do, please include a printed copy. Mail contributions to User-to-User, PC Magazine, One Park Avenue, New York, NY 10016 or upload them to PC MagNet (to join, see the "By Modem" sidebar in the Utilities column). [E]

Affordable Printer/Plotter Networking

LASERNET™ takes the high cost out of networking printers to PCs.

LASERNET is better than a LAN for sharing printers. It's faster. More economical. And, a simple, menu-driven configuration makes installation easy! If you have a LAN, LASERNET eliminates printer-sharing bottlenecks.

With 24 years of market leadership, you can rely on Western Telematic for cost-effective printer networking. Call now for a FREE brochure.

We Took The #1 Editor's Choice In Remote Computing And Kept Going.

ANNOUNCING pcANYWHERE III

Where do you go when you're already at the top? Up! And up! And up!

The *PC Magazine* #1 Editor's Choice in Remote Computing is now even faster. Even easier to use.

And even more clearly the leader, with new, unbeatable features that can't be found anywhere else.

Plus, now you can use pcANYWHERE III™ with PC MacTerm™ to run a PC from your Macintosh.

PC Magazine wrote: "pcANYWHERE is one of those rare programs that costs less than the competition yet offers better performance."

THE BEST IN THE BUSINESS JUST GOT BETTER

pcANYWHERE III lets you run any PC remotely from any other PC, terminal, or Macintosh. Completely control all programs, data, attached peripherals, and internal cards, such as network adapter cards, on the distant computer. Transfer files. Print on either end. All with complete security.

pcANYWHERE III is also the best solution for remote access to a Local Area Network. In fact, Novell chose pcANYWHERE III for remote computing with its new NetWare Asynchronous Communications Server (NACS).™

These are only some of the great, new features:

AUTOMATIC CALL BACK prevents unauthorized access, and lets you control which side of the communication absorbs phone charges. **DIAL DIRECTORY** lets you store a list of phone numbers and make calls with a single keystroke. **CALL LOGGING** records call time and duration—great for client billing and customer support.

VOICE/DATA SWITCHING lets users talk into the same phone line being used for data transmission. **RECORD AND**

PLAYBACK is excellent for remote diagnostics and training; entire remote sessions can be captured and played back later.

BETTER THAN A CARBON COPY

PC Tech Journal: "What is the final verdict on Carbon Copy PLUS...its features are surpassed by those of a package recently reviewed—pcANYWHERE...ease of use, dependability, flexibility of operation, cost effectiveness. On these scores, pcANYWHERE is the better alternative."

PC Magazine: "If there's one program that can handle it all, it's pcANYWHERE...As the least expensive package, it's also the clear front-runner in giving the most bang per buck."

Data-Based Advisor: "My preference, pcANYWHERE performed flawlessly...inexpensive enough to be installed wherever there's a modem."

Family and Home-Office Computing: "A 'best buy' in my book."

And they didn't even see pcANYWHERE III!

LOW PRICE INCLUDES BOTH HOST AND REMOTE SIDES

Best of all, pcANYWHERE III retails for only \$145. And unlike other remote computing packages, one purchase of pcANYWHERE III provides the software necessary for both sides—host and remote—of a PC-to-PC connection.

For more information, or to place your order, call your local dealer or distributor. Or contact DMA at 212-687-7115, or write to: Dynamic Microprocessor Associates, Inc., 60 East 42nd Street, Suite 1100, New York, NY 10165.

pcANYWHERE III, pcANYWHERE, and PC MacTerm are trademarks of Dynamic Microprocessor Associates. Other products are trademarks of their manufacturers.

pcANYWHERE III. THE INDUSTRY CHOICE FOR REMOTE COMPUTING.

THE 386™ CHIP: IT'S NOT WHAT YOU'VE GOT. IT'S WHAT YOU CAN DO WITH IT.

386 is a trademark of Intel Corporation.
Alpha Channel is a trademark of International Business Machines Corp.

You'll know the name Olivetti. You probably know it is the largest European-based information technology group (in fact, one of the top ten worldwide with revenue that tops \$ 6.5 billion). What you may not know is that it's also a world leader in 386-based PC technology. Because what counts is not just having the 386. It's also what you are able to do with it. Take, for example, the M380 line from Olivetti Systems & Networks (that's the biggest European PC manufacturer, by the way). Top of the line is the brand new M380/XP9 - one of the fastest, most powerful PCs in the world. The new

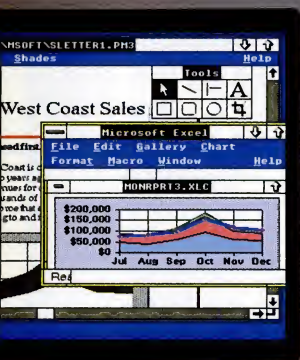

386 technology just announced by Intel gives it a clock speed of 33MHz. And that leaves the competition standing. Other features of the XP9 include a 135MB hard disk unit, 4MB standard RAM, eight available slots and VGA-compatible graphics. But the M380 line is a whole family of powerful 386-based machines, with models to cater for just about any user needs.

olivetti
OLIVETTI SYSTEMS & NETWORKS

These include the XP1, the new 25MHz XP4, the floor-standing XP5, and the newly-launched 25MHz XP7 with 4MB standard RAM and capacity for five integrated peripherals. And, for those of you who are into MCA, we offer two fully-compatible machines: the 386SX-based P500 and the 386-based P800. It's a lineup that will give some idea of what Olivetti Systems & Networks can do with the 386 micro-processor. But there's a lot more besides. For further information please contact: Olivetti USA 765 U.S. Highway 202 Somerville, NJ 08876-1289

Push your software to the limit.

If you want to get the most out of today's new, high-powered software applications, we have a few words of advice:
Use a Microsoft® Mouse.

The Microsoft Mouse gives you easy access to all the powerful features today's software has to offer.

It looks innocent enough here, but wait until you see how the Mouse makes your software scream.

The Mouse can unleash your software—and take full advantage of the features intended to make your work easier.

With the Mouse you can effortlessly manipulate menu-driven applications without taking your eyes off your screen. You can pull down menus. Highlight text in one fell swoop. Copy, cut and paste formulas in spreadsheets easily. And move things from here to there without any command-key mumbo jumbo.

Literally hundreds of applications support the Mouse. But as the leading software developer for personal computers (and one of the first to bring a graphical interface to PC screens), we've gone a step further:

Microsoft Windows/286 with PC Paintbrush® for Windows, Microsoft Paintbrush or EasyCAD™2 actually come with the Mouse (or vice versa).

Already, the Microsoft Mouse has made its way into the hands of over one million personal computer users. And that number is sure to grow even faster. After all, graphically oriented software is the driving force behind improved productivity.

But it's the Microsoft Mouse that puts you in the driver's seat.

■ EDITED BY CRAIG L. STARK

POWER USER

Make your network printer wait for a sheet of letterhead stationery; an easier way to find style sheets in Word; underline and bold WordPerfect text with one macro.

Here's a way to use WordPerfect 5.0 macros to locate hard-to-find characters

In preparing WordPerfect text for use with Ventura Publisher or other page-formatting software, many characters—such as typographic quote marks and em dashes—require special codes. Simple search-and-replace macros can handle some of these. However, hyphens that should be converted to en dashes between numbers (as in “pages 3–9”) are difficult to search for.

WordPerfect 5.0's new macro language makes the job much simpler. The programming statements can be entered only in the built-in macro editor, however, so a macro must exist before it can be edited. The first step, therefore, is to define NDASH from the keyboard, using macro definition (Ctrl-F10). Then put in the initial search for a hyphen (F2, hyphen, F2) and end the macro definition. Now hit Ctrl-F10 again, give NDASH as the macro name, and elect to Edit the existing macro. Choose Action in the editor to edit the macro so that it exactly matches Figure 1.

The macro commands (such as LABEL, CASE, and GO) are entered by first pressing Ctrl-PgUp. This brings up a list of commands from which you choose the one you want. Normal WordPerfect commands can be entered by hitting the appropriate key combinations (F2 for search and Alt-F2 for search-and-replace, for example) or by first hitting Ctrl-F10 (which turns on function mode) and pressing the

appropriate keys (such as Home-Home-Up). Pressing Ctrl-F10 again turns off function mode. To enter variable numbers, first press Ctrl-V, then hold down the Alt key and press the number of the variable (0 to 9). When finished editing, press F7 to exit (not in function mode).

Though not adequately documented in the manual, the new macro language opens up new possibilities for complex text processing in WordPerfect.—Michael Conner, Kampsville, Illinois

You can also use this technique in other macros that need to test whether a character belongs to a particular set of characters. The basic principle is the same: Block the character, assign it to a variable, and use a CASE statement that contains an entry for

each member of the set.

Previously, I've been able to show you how to define macros simply by listing the keystrokes. Because of the advanced macro features of WordPerfect 5.0, however, that's no longer a viable method. Thus, you'll be seeing more and more macros here in which your instructions consist of a screen shot of the macro editor. If you haven't started using the macro editor, try it with some of the examples in this column.—Neil J. Rubenking

You can underline and bold WordPerfect text in a single operation

Making existing text both bold and under-

PRODUCTIVITY

■ POWER USER

fect, but the macro below makes it a breeze. The macro takes advantage of the GoTo mode, which is turned on when the Block On is active. In this mode, the cursor will move to the next occurrence of any key that is pressed, marking the block up to this character. Thus, for example, you can simply press the Spacebar to mark a word, or hit the period key twice to mark two sentences.

You can also use the cursor movement keys to mark the block, of course. After the block is marked, press Enter to make the text underlined and bold. The macro keystrokes are shown in Figure 2.

Note that the keystrokes won't perform the expected function when you're defining the macro, because no block has actually been marked during definition.—H. S. Chan; Penang, Malaysia

This technique becomes even more interesting in WordPerfect 5.0, since there are many more text variations that you might want to combine. The macro shown in Figure 3 makes a block of text underlined, very large, and shadowed—admittedly, a bizarre combination—all at once.

As with Chan's 4.2 macro, the key-

strokes won't do what you expect during the creation of the macro. Just press them in order and they will be recorded correctly. If there are special combinations of text attributes that you use often, create a macro like this for each combination.—Neil J. Rubenking

Here's how to make it easier to find your style sheets in Word

In one of his books on *Microsoft Word*, Peter Rinearson suggests that if you intend to start the program from more than one directory, you should put all your style sheets in a single directory reserved for them alone. This avoids cluttering your disk with a multitude of similar style sheets, and it ensures that if you update a style sheet in one place, all documents with that style sheet will be immediately updated.

Unfortunately, the use of a separate style-sheet directory means that each time you start a new document or open a new window, you have to tell Word where to find NORMAL.STY. This can be an irksome chore, but the following macro

```
<Ctrl-F10>
UND<BOLD
<Alt-F4>
<Ctrl-PgUp><CR><CR>
<F8>
<Alt-F4>
<Ctrl-Home><Ctrl-Home>
<F6>
<Ctrl-F10>
```

Begin macro definition
Call it UND<BOLD
Block On
Pause to specify block
Underline the block
Block On again
Go to start of previous block
Make block bold
End macro definition

Figure 2: This macro allows you to combine underlining and boldface operations.

```
<Ctrl-F10>
UND<MORE
(description)
<Alt-F4>
<Ctrl-PgUp>1<CR>
<Ctrl-PgUp>DN
<Ctrl-F8>SV
<Alt-F4>
<Ctrl-Home><Ctrl-Home>
<Ctrl-F8>AA
<Alt-F4>
<Ctrl-Home><Ctrl-Home>
<F8>
<Ctrl-F10>
```

Begin macro definition
Call it UND<MORE
Enter description of choice
Block On
Pause
Turn the display off
Set Size Very large
Block On again
Re-mark same block
Set Appearance shadowed
Block On yet again
Re-mark same block
Underline the block
End macro definition

Figure 3: The greater versatility of WordPerfect 5.0 allows combining more text attributes. The macro above combines underlined, very large, and shadowed specifications in a single operation.

Break through!

COREL OPTICAL DISKS for NOVELL LANs

COREL announces the finest in data security and mass storage for Novell Networks.

As the world's leading developer of WORM (Write Once Read Many) interface software for IBM and Apple Mac computers, COREL brings it's record of software excellence to the network environment.

Now, Novell Network 2.15 has a new storage solution breakthrough. COREL optical disk subsystems provide the ultimate back-up and highest security options available.

Operating on the network file server, COREL's optical software supports elevator seeking, directory hashing, and directory caching. Complete access

across Network Bridges let you support and run even your largest applications. No extra hard disk space or workstation memory is required.

Optical storage gives you the potential for infinite capacity since removable optical cartridges are used. And security is insured with the write-once character of the technology. You'll never worry about losing data again.

COREL software is completely compatible with Novell Network utilities, security levels, and all existing applications. The world's leading developer of WORM interface software invites you to make the networking breakthrough. For details, contact COREL Systems today!

CIRCLE 370 ON READER SERVICE CARD

LITTLE PRICE.

BIG WALLOP.

If you're looking for an easy-to-use database that's compatible with dBASE, you've found it.

It's menu-driven PC-File.dB, the database for a little price that packs a very big wallop.

Just for grins try mail merge, report writing, quick labels, advanced graphing, macros and LAN support on for size.

Then add compatibility with dBASE III Plus or dBASE IV databases.

That's a lot for \$89.95.

So see your dealer today. For once it's the program that'll knock you out, not the price tag.

For the name of the dealer nearest you, call 1-800-JBUTTON. (In WA state 206-454-0479.)

ButtonWare

ButtonWare, Inc., P.O. Box 98058, Bellevue, WA 98009, 206-454-0479

When ordering directly from ButtonWare, please add \$5.00 for shipping and handling.

PC-File.dB is a trademark of ButtonWare, Inc. dBASE III Plus and dBASE IV are registered trademarks of Ashton-Tate, Inc.

■ POWER USER

makes it easy to attach a style sheet from a common directory:

```
<ctrl esc>fsc:\ss\<f1>
```

This ends with the list of style sheets on-screen, so that you have to choose only the one you want.—Albert Delfiner, *Easichester, New York*

As written, the macro assumes that the style-sheet directory, SS, is in the root directory. A better choice would be to put it in the *Word* directory so you don't clutter up the root.

Also keep in mind that maintaining a separate style-sheet directory is not the only reasonable choice. One obvious possibility is simply to keep all style sheets in the *Word* directory, where the program expects to find them. Granted, this adds more files to an already crowded directory, but when you use the Format Stylesheet Attach F1 command, *Word* will show only files with an STY extension.

Another possibility is to keep most style sheets in a single directory but create special style sheets for directories that naturally require unique styles. For example, if you keep a correspondence directory that contains all of your letters, it makes more sense to have a special NORMAL.STY for letters in that directory than to have a separate LETTERS.STY in the style-sheet directory.

If you use this trick, then whenever you start a letter in the correspondence directory, *Word* will automatically load the NORMAL.STY for letters. When you load files in other directories, *Word* will automatically load the NORMAL.STY from the *Word* directory. You should use this approach sparingly, however, since you can quickly confuse yourself by creating multiple style sheets, all of which have the same name.—M. David Stone

How to tell your network printer to wait for a sheet of letterhead stationery

Our office uses *WordPerfect* in a network environment where 30 people share two HP laser printers. A request to print on letterhead used to signal the start of a departmental relay race. On your mark (load tray

with letterhead). Get set (send print job). Go (grab printout—often someone else's—on your letterhead).

The solution was to write a macro to pause the printer and request a manual sheet feed. Simply enter the keystrokes shown below to assign the macro to Alt-L (for letterhead). Naturally, any legal macro key or name may be used.

```
<Ctrl-F1>      Start Macro Def.
<Alt-L>         Call it Alt-L
<Home><Home><Up> Go to top of doc.
<Ctrl-F1>>A     Insert printer Cmd.
<27>&12H        Cmd. for manual feed
<CR><CR>        "Enter" command
<CR>            "See Note below"
<Ctrl-F1>       End macro Def.
```

(Note: You must have at least one blank line for the command to work correctly. You may add additional blank lines to avoid printing on your letterhead.)

When your document prints, the printer will eject a blank sheet and then pause with the message "PF FEED LETTER." You should then insert your letterhead. Only the first page will print on letterhead; the remaining pages will print on whatever is in the paper tray.

One additional note: The printer command that requests manual feed is saved with your document.—John Grundy; Mesa, Arizona

Of course, you may have to modify the macro above to match your particular laser printer's command sequences. Check your manual to see what the code to request a manual feed is, and substitute it for the <27>&12H in the macro. *WordPerfect* 5.0 users can easily create a corresponding macro by following the comments rather than the exact keystrokes.—Neil J. Rubenking

Share Your Power

Tell fellow users your latest technical tips for hardware and software applications (other than spreadsheets, networks, languages, or DOS) through Power User. We'll pay \$50 or more for any tips we print, plus an extra \$25 if you submit your letter on-disk. If you do, please include a printed copy. Mail contributions to Power User, *PC Magazine*, One Park Avenue, New York, NY 10016, or upload them to PC MagNet (to join, see the "By Modem" sidebar in the Utilities column).

ging onto the mainframe, and wading through the passwords and commands to arrive at the E-Mail screen.

It's not hard to see how NOW! reduces wasted time, needless stress and training costs.

Nor is it difficult to find out more. Simply call or write and we'll send you a free demo disk and detailed information.

All of which, you'll be pleased to hear, is written in a language called English.

How UDS squeezes more out of the V.32 standard

Believe it! In the hands of UDS engineers, the V.32 standard means a lot more than 9600 bps, full-duplex.

Every UDS V.32 is fully compliant with the CCITT recommendation, but that's only the beginning. Model V.3225, the latest in the UDS V.32 family, offers lots of extra features.

First of all, there's MNP level 5, the data compression/error control technique that increases data throughput by as much as a 2:1 ratio. In other words, a UDS V.3225 can give you full-duplex error-free communication at 19.2 kbps!

When your dedicated line goes down, V.3225 is the ideal dial back-up

solution. It even checks the dead line periodically and switches back to it as soon as it's available.

Then there's V.22 b/s operation; If your V.3225 receives a call at 2400 bps, it automatically drops to that speed, and full-duplex communication goes on.

Got a real data density problem? The card you get in your free-standing V.3225 can be plugged directly into the Universal Data Shelf™, giving you as many as 16 channels in a standard 19- or 23-inch equipment rack.

To learn how the V.3225 can squeeze more from your datacomm system, contact Universal Data Systems, 5000 Bradford Drive, Huntsville, AL 35805. Telephone 205/721-8000; FAX 205/830-5657.

CONNECTIVITY CLINIC

The difference between software that is usable on a LAN and software that uses a LAN; some data switches don't just deliver mail—they read it; a PC LAN Labs free T-shirt offer.

A data switch can spoil protocol file transfer attempts

We recently switched from dial-up lines to a multiplexor with leased lines to communicate with the DEC VAX minicomputer at the home office. It has been a big improvement, except that I can no longer transfer files. Why, when we are no longer getting garbage on the lines and everything else seems to work, do file transfers fail?—*William Jarman; Great Falls, Montana*

A multiplexor is a sophisticated form of data switch that packs the equivalent of several telephone or data lines together and sends the information economically over lines leased from a telephone company. A multiplexor is closely related to the data PBXs or data switches that I tout so highly as connectivity alternatives in many installations. The trouble with some of these systems (they're not all alike) is that they don't just pass along the mail, they insist on reading it first!

You didn't specify what file transfer protocol you were using, but I'll bet it is some form of Xmodem. Many file-transfer protocols (such as Xmodem) may send special characters such as XOFF and XON (decimal 19 and decimal 17) as part of the data in the file. These are control characters and are frequently interpreted as instructions by the multiplexors or data switches. As such, they have unintended functions and are essentially "eaten up" by the switch.

File transfer protocols such as Kermit avoid troublesome control characters and should provide a solution. Xmodem is unsuitable for a variety of reasons. Usually it cannot be used over a multiplexor connection or over X.25. It doesn't have a configurable block size and it alters the size of files, rounding them up to the nearest 128 bytes. In addition, it performs no data compression—a feature that sometimes allows effective data-transfer rates greater than the actual bps rate of the line.

Not all software on a network is networked

I'm helping plan a local area network using NetWare over 3Com EtherLink adapter cards. Can you explain what's the difference between software that is usable on a LAN and software that uses a LAN? Do we have to get new application software

for everything we do? Also, what's the best way to let people remotely control stations on the LAN?—*Eric R. N. Hall; Atlanta, Georgia*

Most normal single-user software will work on a LAN as well as on a single-user PC, as long as it is used by only one person at a time. This kind of software doesn't use the LAN services. It just resides on one of the LAN's logical disk drives, where it also stores its data.

LAN programs let you "map" part of the server's disk space so it looks like a local disk drive to your operating system and your software. The application software neither knows nor cares that drive C: is on your desk, while drive G: and the laser printer are down the hall.

This is the way most people use application software on a network. Standard DOS programs are perfectly happy this way unless more than one person tries to use the same files at the same time. In practice, most people put their programs and files in private subdirectories on the server and put only shared data files in public directories.

You can get remote-control dial-in access to a LAN using software such as Crosstalk Communication's *Remote*². Remote-control software runs on a modem-equipped PC on the LAN. Users can dial into this PC and use the remote-control program to log on to the LAN. The remote-control program doesn't care that drive G: is down the hall either—it's just handling the modem and rerouting the console I/O to the modem.

■ Most normal single-user software will work on a LAN as well as on a single-user PC, as long as it is used by only one person at a time.

■ CONNECTIVITY CLINIC

Software that *uses* a LAN for something more than simple data storage and print spooling is a little more complex. It must be tailored to the type of LAN you're using, since the facilities available and the methods necessary to use them vary from LAN to LAN.

Most LANs have multiuser facilities such as record locking to prevent two users from simultaneously changing the same record in a database. However, they are available only to the applications written to use them. Other LAN services, such as NetBIOS and IPX, provide interstation communications, making it possible for application programs that are running on separate workstations to coordinate their activities.

This type of intraLAN, interstation communications facility can be exploited by some remote-control products, too. *RemoteLAN* (also by Crosstalk Communications) uses the LAN's communications capabilities, allowing one LAN workstation to serve as the remote console for another LAN workstation. In this arrangement, all communications go over the LAN and no modem is used. On a large LAN, this

■ Most LANs have multiuser facilities such as record locking to prevent two users from simultaneously changing the same record in a database.

would allow a central help desk to investigate problems experienced by people using the LAN without requiring additional hardware or phone lines.

Although you usually think of "resource sharing" on a LAN in terms of disk drives and printers, over-the-LAN remote-console software allows network users to share a single-user application as a resource, too. A CD-ROM-based research

package, such as Ziff-Davis's Computer Library, is a perfect example of this type of resource. Running Computer Library's *Lotus BlueFish Searchware* under *RemoteLAN*'s control not only shares the CD-ROM drive as a resource but shares the software that uses it, too. When it is run in this fashion, any user on the LAN can use the nominally single-user Computer Library software to search the abstracts and full-text articles on the CD-ROM; the users just make a "call" over the net with *RemoteLAN*.

Report the activity of your Novell network to PC LAN Labs and get a free T-shirt

I recently saw someone wearing a PC LAN Labs T-shirt on the beach. He really looked sharp. How can I get one of those great T-shirts?—*Ama Fan; Silicon Valley, California*

Have I got a deal for you! If you are a Novell network administrator, I will send you one of our official and exclusive PC LAN Labs T-shirts in return for a few minutes of your time.

We want to establish a correlation between our LAN benchmark tests and the load carried on your networks using the *NetWare 2.1* accounting capability. To do this, we need a printout of the report the *NetWare ATOTAL* utility generates detailing one week's activity. Include some annotation as to the average number of active workstations, the hours they operate, the kinds of tasks they generally perform (data entry, accounting, word processing, and so forth), and the kinds of network cards used (ARCnet, Token-Ring, and Ethernet, for example). In return, I'll send you one of the official PC LAN Labs T-shirts. They have our special logo and are sure to get you respect on the beach, in shopping malls, and on the job.

ATOTAL compiles data from the accounting system, so you have to use the first selection in the SYSCON menu to turn on the accounting function. Additionally, you have to assign charge rates to the five different services monitored by the accounting system. (See pages 4-9 of the *Supervisor Reference manual*.)

A word of warning, however: you must enter the Supervisor Options menu under SYSCON, choose the Default Account Balance/Restrictions menu, and give everyone a default of unlimited credit. (See pages 4-14 of the manual for details.) If you don't do this, all of your users will be locked out of the network. This is likely to make you so unpopular that not even our T-shirt can help.

At the end of one week, run ATOTAL and print the screen. The accounting system doesn't post results until after a user logs off, so run the report when most people are off the system. Send the printout to PC LAN Labs, P.O. Box 6009, Destin, FL 32541. Remember to tell me to what address I should send the T-shirt.

The ATOTAL report won't give us a picture of the peak load. If you can find a way to show us the load during a peak period, I will also send you some of our high-quality PC LAN Labs drinking cups—the same ones we use on the Destin beaches.

Productivity Tip

Are you interested in improving LAN performance? Before you buy a high-speed 386 machine for a file server, take a look at your present server's hard disk drive. Then, simply buy a bigger, faster drive or put in multiple drives. Server processors typically loaf along while the drive screams.

Network Your Questions

Connectivity Clinic gives you practical solutions to networking problems of all types. We'll pay \$50 or more for any tips we print, *plus an extra \$25 if you submit your letter on a disk*. If you do, please include a printed copy. We'll gladly answer your questions at no charge, but we cannot answer letters personally. Mail contributions to Connectivity Clinic, *PC Magazine*, One Park Avenue, New York, NY 10016, or upload them to PC MagNet (to join, see the "By Modem" sidebar in the Utilities column). You may also contact Frank J. Derfler, Jr., via MCI Mail (use Derfler's box named CONNECTIVITY CLINIC). ☐

Push-Button Computing

A sample Home PAD. Everything starts here. Now, any DOS-based computer can behave like a state-of-the-art workstation costing thousands of dollars more.

The DOS PAD. Press the DOS button. DOS is demystified.

HyperPAD takes telephone and contact management a step beyond by automating data management chores — at the push of a button.

HyperPAD comes with more than two-dozen PADs — a complete desktop management environment that includes applications and utilities that would cost hundreds of dollars elsewhere.

PC Magazine's Direct Marketing Connection

For PC Products and Services

For many of you, mail order is your primary means of purchasing PC products and services.

In fact, in recent interviews with our subscribers, we learned that 70% bought PC products and services through direct marketing channels during the past year.*

You buy direct because it's convenient, because you know exactly what you want and don't need any hand-holding.

The following special section, PC Magazine's Direct Marketing Connection, is what you've been demanding. It connects you with the direct marketers who are anxious to please you. By having them all in one place, you can quickly zero in on the products you need from the vendors you want to buy through.

America's choice and **Arlington Computer Products** choice is **EPSON®**

It's not hard to understand why. Care in design, engineering and manufacturing have made Epson an industry leader and the industry standard. And to back their reputation, a one year warranty stands behind every Epson product.

Arlington Computer Products is an authorized Epson® dealer. Please call for immediate delivery at very competitive prices.

Epson FX-850

- Narrow-carriage 9-pin, dot-matrix printer
- SmartPark™: a unique Epson paper-handling innovation, lets you switch from fanfold to single sheets or envelopes without removing hardware or paper.
- With a standard push feed tractor and single sheet friction feed, the FX-850 can handle virtually any type of paper as well as envelopes.
- Exclusive SelectType front control panel puts popular printer features and SmartPark operations at your fingertips.
- The FX-850 prints 264 characters per second (CPS) in high-speed draft mode (12 CPI); 54 CPS in Near Letter Quality mode (12 CPI).

Epson FX-1050

- Wide-carriage 9-pin, dot-matrix printer
- SmartPark™: a unique Epson paper-handling innovation, lets you switch from fanfold to single sheets or envelopes without removing hardware or paper.
- With a standard push feed tractor and single sheet friction feed, the FX-1050 can handle virtually any type of paper as well as envelopes.
- Exclusive SelectType front control panel puts popular printer features and SmartPark operations at your fingertips.
- The FX-1050 prints 264 characters per second (CPS) in high-speed draft mode (12 CPI); 54 CPS in Near Letter Quality mode (12 CPI).

Epson LQ-500

- Epson's 24-pin, dot-matrix technology creates true letter quality characters and high-resolution graphics
- Prints 180 characters per second (CPS) in draft mode; 60 CPS in letter quality (12 CPI)
- Automatic single sheet loading, standard pull tractor and friction feed for versatile paper handling
- Exclusive SelectType front control panel offers quick, easy selection of popular typesets, fonts and pitch
- Two resident, letter quality fonts — Roman and Sans Serif
- New "shadow" and "outline" print modes for use with desktop publishing applications

Epson LQ-850

- Epson's 24-pin, dot-matrix technology creates true letter quality characters
- Epson's SmartPark™
- Exclusive SelectType front control panel offers quick, easy selection of popular typesets, fonts and pitch
- 284 Characters per second in the high-speed draft mode delivers outstanding productivity
- 88 Characters per second in Letter Quality mode for enhanced, high-resolution characters
- In draft mode or Letter Quality mode, the LQ-850 runs at a surprisingly quiet 55 dB noise level

Epson LQ-1050

- Epson's 24-pin, dot-matrix technology creates true letter quality characters
- Epson's SmartPark™
- 264 Characters per second in the high-speed draft mode delivers outstanding productivity
- 88 Characters per second in Letter Quality mode for enhanced, high-resolution characters
- In draft mode or letter quality mode, the LQ-1050 runs at a surprisingly quiet 55 dB noise level
- Exclusive SelectType front control panel offers quick, easy selection of popular typesets, fonts and pitch

Epson LQ-2550

- 24-Pin technology creates superior Letter Quality characters and high-resolution graphics up to 360 dpi.

- 7-Color printing capability is standard.
- Epson's SmartPark™
- Exclusive LCD SelectType front control panel for easy selection of pre-sets, fonts and printer functions.
- 133 Characters per second print speed in Letter Quality mode (12 CPI).
- 400 Characters per second print speed in draft mode (12 CPI).
- Epson LQ ESC/P™ assures software compatibility.

NEW 20MHZ SIVA 286 SYSTEM

delivering superior Quality, Performance and Value!

VNS introduces this new system which includes many important options as standard: 40MB Hard Disk, 1MB Memory and more! **Priced at \$1595**

Complete System Features:

- CPU 80C286 running at 16/20MHZ
- 0/1/0.5 Wait State selectable
- High speed RAM 1MB expandable to 4MB on board (16MB total) memory above 640K is configurable
- Award BIOS with built-in setup
- 40MB hard drive ST251-1, 28ms access time
- 1.2MB floppy drive
- Ultra high speed floppy/hard disk controller 1:1 interleave, 800KB/sec
- High resolution 12" monochrome monitor with tilt and swivel base
- Real time clock calendar with battery back-up
- On board 80287 co-processor socket
- 4-16 bit and 1-8 bit expansion slots available
- 2-Serial, 1-Parallel and 1-Game port
- 101 keyboard fully AT-compatible
- DOS, OS/2, XENIX-compatible

System Upgrades

- 20MHZ CPU upgrade — \$99 only
- Additional 1MB memory — \$199
- Additional 3MB memory — \$599
- EGA upgrade — \$395
- VGA upgrade — \$495
- Upgrade to 86MB hard drive — \$395

Thank You!

Seagate SCSI Kits

The Small Computer Systems Interface (SCSI) provides increased performance, reliability, and flexibility over ST412 drives. Performance is improved through improved transfer rates, built-in 1.7 alternate capacity, and automatic error detection and correction.

Shamrock SCSI kits are compatible with all 8006, 286, 386, PS/2 Model 24, 30, and 30286 systems. Each kit includes: high speed SCSI hard drive with face plate, host adapter, installation guide with menu driven software, and mounting hardware. Bundled software includes the **TakeTwo** backup utility, and **Leprecode** disk cache software. Specify computer when ordering.

Seagate Model	Size	Formatted Capacity	Average Time	Kit Price
ST225N	5.25"	20MB	65 msec	\$379
ST139N	3.5"	30MB	40 msec	\$399
ST157N	3.5"	49MB	40 msec	\$399
ST277N	5.25"	65MB	40 msec	\$499
ST294N	5.25"	80MB	38 msec	\$559

For ST225 Combination: SCSI Hard/Floppy Controller add \$40

Seagate PC/XT Disk Kits

- Pre-installed & Formatted
- Wireless Digital short slot controller
- 30 page installation guide & reference manual
- Cables, mounting screws, full & half-height face plates
- FREE **TakeTwo** high speed backup software PC MAGAZINE "Editors Choice"
- FREE **Leprecode** software by Multisoft
- 1 year Warranty, 30 Day Money Back Guarantee
- Optional 160 Watt UL/ULC approved power supply for IBM PCs \$50

30MB KIT \$299 (Seagate ST225N)
• 32 7MB/55ms, half-height 1.44 watts
65MB KIT \$499 (Seagate ST277N)
• 65 5MB/55ms, half-height 1.44 watts

- Seagate Matched Pair Kits
- 20MB \$249
- 40MB \$349
- Seagate Drive & Matched Controller
- 1 year factory warranty
- 15% faster throughput than ST251 drive

\$219

- 4 1/2" scan width, 400 dpi resolution
- 16 grey scales, 8" per second speed
- Comes with short slot controller & 7" cable
- Use with Hercules, CGA, EGA, & VGA displays
- Scan images for Fax
- Optional OCR Software available
- Includes HALO DESKTOP PUBLISHING EDITOR software

Jumbo Tape Backup

COLORADO
SABRENT SYSTEMS

\$299
(with Tape Cartridge)

- 40.8 Megabytes per DC2000 tape cartridge, one tape included
- Connects to floppy disk controller
- Uses standard QIC-40 format 2MB per minute in AT's, 1MB/min in PC/XT
- External chassis available
- Novell, 386CM & SCO Xenix Compatible
- DC2000 Cartridges: \$77 ea. & \$110

3.5" Floppy Kits

3.5" External Floppy Drive: \$299

External High Density 1.44MB Floppy Drive for PC/XT Computers.

The easy way to transfer PS/2 data between systems. Includes replacement high speed controller, cables and manual.

FREE: TakeTwo, the backup utility PC MAGAZINE names as their Editor's Choice. Now you have a fast, affordable backup solution that brings you trouble compatibility with the latest IBM PS/2 systems.

720K Internal for PC/AT/AT, \$109

- Features DOS 3.2 or optional \$15 driver software.

1.44MB Internal for AT only \$139

- Includes driver software

1.44MB Internal for PC/XT \$189

- Floppy Controller & cables with 500,000 bit/second data transfer rate. Supports 2 drives
- Instant Laptop & PS/2 compatibility. All kits include bracket to mount in 5 1/4" drive bay, black & grey face plates, and mounting rails
- 1.44MB XT kits include replacement floppy controller that doubles the data transfer rate

286 and 386 Computers

Our data clustering systems come standard with high performance 386i dual interface. They give you the data transfer capabilities required by the high performance generation of systems. All our computers have 8 slot motherboards, room for 1 full and 3 half-height drives, serial/printer ports, AWARD BIOS, clock controller, choice of 1.2 MB or 1.44 MB floppy drive, and Leprecode Enhanced Keyboard with tactile switches and built-in auto calculator.

Our 286 systems feature 12 & 16 MHz processors and 512K RAM standard, upgradable to 4 MB on system board.

Our 386 systems offer 18, 20 & 25 MHz processors and 1 MB RAM standard, upgradable to 8 MB. A 64K static column RAM cache operating at 35 nanoseconds ensure maximum processor performance.

And don't forget that when you buy from Shamrock you get a 1 year warranty and 30 day money back guarantee!

GENOA SuperEGA HRes+ (4860-9)	180

POLICY: Min. order \$100 for CDD/Credit Cards. Prepaid orders Min. \$50. Prices & availability subject to change. Shipping charges vary Min. \$10. Prices reflect discount for advance payment. Add 2% (Min. \$5) for CDD & Discover, 3% for MC/VISA and 5% for Amex & Optima. CDD requires cash or cashier check. All sales final. Refused shipments subject to a 20% charge (Min. \$50). Not responsible for compatibility. *PICKUP HOURS: Mon-Fri: 3 to 5 pm, PLEASE CALL FIRST FOR WORKORDER. *

FOREIGN ORDERS: For foreign orders add special handling charge of \$30 per order. Air shipments add 10% (Min. \$50). For Printers & Monitors 30% (Min. \$150). Some items may be made. Credit card orders, add 5% to amount owed. FAX: 714-881-3384

★ FREE DELIVERY ★

* PREPAID ORDERS IN CONTINENTAL USA ONLY *

Simply mail the check for the exact amount (CA add 6%) as shown here with your order. We will ship your order UPS Ground, FREE of any other charges. It is that simple. Money order/Bank check orders shipped immediately. Personal/Co. checks delay shipment 2/3 weeks. (Credit Card orders are not considered prepaid).

MICROBEST

PLEASE REFER TO AD # PC 915

RGB Color Monitor by Samsung

\$199

These 14" monitors were purchased from a large PC manufacturer who was overstocked. They

are brand new with one year warranties and are made by Samsung. They are fully CGA compatible and work with PC compatibles. A CGA (640 x 200 resolution) card is just \$49 and comes with a printer port. This is the perfect video combo for your new XT or AT clone.

SPECIALS

WordPerfect 5.0

\$215

The most popular word processor is now even better than ever! Version 5.0 adds multiple font support, graphics integration, page preview and much more. WordPerfect 5.0 still retains its feel and ease of use that made it #1. Combine this with the best support in the industry and you can't lose.

FoxBASE+

\$185

FoxBase+ 2.10 is simply the fastest dBASE compatible database software available. FoxBase+ also adds many enhancements to the dBASE language.

And it's user-friendly too, its FoxCentral uses pull-down and pop-up menus and you can perform every important database operation without programming! There are even LAN, runtime, and 386 FoxBase versions available.

BUSINESS TO BUSINESS™

One Year Free Replacement Warranty

We guarantee every product we sell to be free of defects as covered in the manufacturer's warranty, or we will replace it with a brand new one FREE for one full year. You only pay shipping and insurance.

"The response to our new one year free replacement warranty has been tremendous. For the first time a direct marketing company has addressed the major concern of direct buyers."

"What do I do when I have a problem?"

Now Business To Business has answered that question decisively. If a problem occurs with any product you purchase from us anytime during the first year and it's covered by the manufacturer's warranty, simply ship it back to us and we'll immediately ship you back a brand new one FREE."

Jeffrey M. Kreps
President

Why We're The BEST Direct Marketer in the U.S.

- ☒ Exclusive ONE YEAR Replacement Warranty
- ☒ 30 Day Return Privilege
- ☒ No Extra Charge for Credit Card
- ☒ Same Day or Next Day Shipping
- ☒ No Charging Credit Card Until Product Ships
- ☒ Factory Authorized Service Center
- ☒ Highest % of Products in Stock
- ☒ Customer Always told Stock Status before Ordering
- ☒ Knowledgeable Sales and Technical Staff

Invisible Network.

Expanded Memory Support. Invisible Network is the only LAN that supports expanded memory. On computers equipped with expanded memory version 4.0, your DOS memory overhead can be as little as 3K for a workstation, 13K for a server. And you can increase total DOS memory from 640K to 704K. Now you can have over 630K of free DOS memory while running the network! If you don't use expanded memory, the overhead is still low: 60K for a workstation, 80K for a server.

- Prices include network boards and software—Nothing extra to buy.
- NET 3.0 Network Operating System is full-featured, easy to install, and has extensive on-line help. Can be used with or without expanded memory.

"Good performance under load, elegant design, low price, simple cabling requirements, and broad compatibility."
—PC Week

"The Invisible Network is really easy to install. And it's inexpensive."
—LAN Magazine

"A joy to use. I highly recommend it."
—Data Based Advisor

INSTANT SATELLITE NETWORKS

Distributing information via satellite is profitable and cost effective. You can deliver information anywhere in the continental U.S. in seconds to an unlimited number of locations. You control authorization to receive your transmission. S.T.A.R. provides you with everything you need.

MUSIC

FINALLY AN AFFORDABLE

MIDI STUDIO \$399

- includes
- KEYBOARD
 - INTERFACE
 - SOFTWARE

The CMS-1 is a complete MIDI Studio which includes everything: keyboard, interface and software. The CMS-401 Interface uses the Roland 401 chip set for 100% compatibility with over a 100 music programs. CMS Enhanced Cakewalk software has the best value for the money; it is the features and performance that it offers. The Caste MT-540 keyboard is able to play 4 parts simultaneously. Drums, bass, chords and a lead instrument with up to 16 notes at one time. The MT-540 has a total of 210 sounds derived from (30 PCM) authentically sampled musical instrument sounds! If you already own a MIDI keyboard, the CMS-401 Interface and CMS Enhanced Cakewalk™ is available for only \$249.00. Print your Cakewalk files with the Winning Composer notation program for only \$49.00.

PC Cakewalk beats higher priced sequencers in many functions and is a great package for the money.

Make now the program you're buying is the actual program that motivated PC Magazine's Choice.

HANDS OFF THE PROGRAM®

PC SECURITY

HANDS OFF THE PROGRAM is an all software, privilege based, system security utility that prevents unauthorized access of your PC's subroutines, files, files and data drives.

HANDS OFF THE PROGRAM provides a sophisticated technique to upgrade up to 64 users of a PC, by privilege, into their own separate areas on the hard disk. Users may access only their own areas and any other area protected with a lower privilege.

HANDS OFF THE PROGRAM protects files on your hard disk by preventing unauthorized users from modifying the DOS file attributes (Read Only, Hidden, System). For example, use the **READ ONLY** attribute to prevent virus programs from modifying your system.

HANDS OFF THE PROGRAM monitors access to your hard disk via "disk locking". A "locked" hard disk may not be accessed, according to applications software or formatted via the DOS FORMAT command until it is "unlocked".

HANDS OFF THE PROGRAM incorporates advanced security techniques on PC's running PC-DOS 5.0 or higher. The DOS FORMAT or Drive C is prevented while the PC is in use. The security manager is protected against Control Break and a host from floppy results in the automatic locking of Drive C.

HANDS OFF THE PROGRAM also provides:

- Disk Encryption
- User Access Reporting
- Steps Common Viruses
- Mailbox
- Read Only and Execute Only privileges by user
- Auto Installation

Power User	Tell your network printer to wait for a sheet of letterhead stationery.		411				
Connectivity Clinic	A data switch can spoil protocol transfer attempts.		415				
Connectivity Clinic	Not all software on a network is networked.		415				
Connectivity Clinic	A free LAN Labs T-shirt offer!		416				

COMING UP

DATABASES: OS/2 vs. DOS It's been more than 2 years since IBM introduced OS/2, heralding it as the operating system of tomorrow. Two years, and still DOS reigns supreme, with many software developers taking a wait-and-see attitude on Big Blue's "new standard." Many, but not all. Contributing editor Richard Hale Shaw reviews the OS/2 versions of *Paradox*, *Q&A*, and *R:BASE*—as well as their DOS counterparts—as *PC Magazine* examines this Tale of Two Operating Systems and determines whether OS/2 is indeed "a far, far better thing . . ."

FORMS SOFTWARE It's a hot, new category of computer software, and it's rapidly growing—with more than a dozen vendors currently fighting it out for market share. But forms-generation programs, like the documents they produce, come in all shapes and sizes. *PC Magazine* evaluates 17 of these packages, examining the fine print and reading between the lines.

CLIP-ART LIBRARIES You want to complement your text with graphics but your artistic talent goes about as far as a stick figure with a hat. Or you just don't have the time it takes to sit down and create a dazzling illustration. Well, clip-art libraries are here, offering a wealth of pre-drawn artwork, all ready to use, all promising to add that professional touch to your newsletter, report, or business presentation. No desktop publisher will want to miss *PC Magazine's* in-depth look at 13 of these popular packages.

FONTS With the number of typefaces available to LaserJet and PostScript printer owners rapidly approaching the number of printers out there—or seemingly so—choosing from among the hundreds of font products on the market can be a formidable task indeed. But fear not. Contributing editor Edward Mendelson comes to the rescue with a complete look at all the latest font cartridges, generators, editors, managers, utilities, and soft fonts. It's an article easily subtitled "Everything you need to know about fonts," and it's coming next issue.

FREE INFORMATION

IT'S AS EASY AS 1, 2, 3

1 Fill in your name and address and check off your answers to the eight research questions. (One card per person, please.)

2 Circle the numbers on the card that correspond to the ads or articles you'd like more information about. (Numbers for advertised products are repeated in the Advertiser Index as well.)

3 The literature will be mailed to you from the advertiser free of charge.

Void after August 31, 1989

1. In which of the following sectors does your organization operate? (Check one.)

- a. ☐ Private Industry
- b. ☐ Government
- c. ☐ Education

2. Your primary job function is (check one):

- d. ☐ MIS/DP: Communications Systems, Programming
- e. ☐ Engineering/R&D
- f. ☐ Financial/Accounting
- g. ☐ Marketing/Sales
- h. ☐ Administrative/General Management

3. Is your company a reseller?

- i. ☐ Yes
- j. ☐ No

4. For how many IBM PCs and compatibles do you specify brands of products?

- k. ☐ 10 or less
- l. ☐ 11-25
- m. ☐ 26-100
- n. ☐ 100 or more

5. Are there any PCs in your office? (Check all that apply.)

- a. ☐ Linked to mainframe
- p. ☐ Linked to mini
- q. ☐ Networked together

6. Does your company own:

- c. ☐ Mainframe(s)
- s. ☐ Mini(s)

7. Do you plan to buy any PC products?

- t. ☐ Now
- u. ☐ In 4 to 6 months
- w. ☐ In 6 to 12 months
- x. ☐ No definite plans

8. Number of employees in your entire company?

- y. ☐ 25 or less
- z. ☐ 26-99
- 1. ☐ 100-499
- 2. ☐ 500-999
- 3. ☐ 1000 or more

PLEASE PRINT CLEARLY—use only one card per person PC 5/30-4

Garfield the Cat Stars in Cartoon Generator for Kids

BY ALAN COHEN

Well, he's had his own television special and his own American Express commercial, so it was only a matter of time before someone designed a computer program around Garfield, the world's most famous Fat Cat.

Create with Garfield, Deluxe Edition, \$39.95 from DLM Teaching Resources, lets children design and print their own comics, cartoons, posters, and labels. These creations all feature You-Know-Who himself. The program is set up so that even children with absolutely

no artistic talent can easily and quickly compose professional-looking artwork.

Your child begins by selecting a background from among a variety of predrawn scenes. To this beginning, picture elements, or *stick-ons*, can be added and arranged.

Besides a wealth of Garfield poses, there are stick-on representations of all our hero's favorite and perhaps not so favorite animated pals. Captions are easily added to the picture once the artwork is in place. The child either chooses from among the prewritten captions or composes original dialogue.

Create with Garfield is a lot of fun, but it isn't without its problems. The four-color CGA graphics are far from stunning. And once a stick-on is "stuck on" to a scene, erasing it becomes a production in itself.

If you're willing to deal with

Your child can make Garfield say whatever his or her heart desires with *Create with Garfield, Deluxe Edition*. Artistic talent is not required.

these inconveniences (or, perhaps more appropriately, willing to let your child deal with them), you'll find *Create with Garfield* to be a worthwhile program that's stimulating to young minds.

List Price: *Create with Garfield*,

Deluxe Edition, \$39.95. **Requires:** 256K RAM, CGA graphics, DOS 2.1 or later. Copy protected. DLM Teaching Resources, One DLM Park, Allen, TX 75002; (800) 527-4747, (800) 442-4711 (in Tex.).

CIRCLE 648 ON READER SERVICE CARD

YOU'VE READ ABOUT IT, NOW PLAY IT!

XENOPHOBIE, the Play-By-Mail game given mention in an article in this issue's After Hours section. If you want to become a starship captain, engage in diplomacy, make your ship larger and faster, vaporize other ships or anything else that comes to mind you have five, count 'em, five ways to get FREE information from us:

- 1) Call us any day at 619-744-LOOK from noon until midnight to speak to us face-to-face.
- 2) Call us any day at 619-744-LOOK from midnight until noon to use our BBS system.
- 3) Contact us on CompuServe by leaving your name and address for us using our account number: 76670.1657.
- 4) Circle the number listed below on the reader response card.
- 5) Write us at our office at:

Empire Game Systems
Dept. PCM
P.O. Box 83
San Marcos, CA 92069

If you do any of these things we will send you information on all of our games. Or, you can speed up your entry into **XENOPHOBIE** by sending us a check or money order for \$9.95 for your copy of the **XENOPHOBIE** rules package. This includes 80 pages of rules, maps, charts, tables and so forth.

(Also, ask how you can play a FREE Sampler of our other game, **WARP FORCE EMPIRES!** Plus, don't forget to ask for information on our upcoming game **WORLD CAMPAIGNS!**)

CIRCLE 206 ON READER SERVICE CARD

To complete your library of PC Magazine send \$8.00 for each back issue ordered (\$9.00 in Canada, U.S. funds only) to: Ziff-Davis Publishing Company, P.O. Box 5999, Cherry Hill, NJ 08034, Attn: F. Hunter. Be sure to include month and year of the issue ordered. **For faster service call 1-609-354-4975.**

Manhunter: A Grisly Vision of New York Under Alien Control

BY STEPHANIE K. LOSEE

The beautiful opening screens of *Manhunter*, Sierra On-Line's latest graphics-based adventure game, set you up for something really good. While the game boasts some of the best graphics you've ever seen, actually play-

and the rest is just a pretty picture. But it's not all pretty—this game is full of graphic violence. You'll watch your limbs blown off, your head smashed to a pulp, and the skin removed from your face.

Amid the blood and gore, *Manhunter* does have merit, including the superb graphics. The game takes place in an architecturally correct rendition of New York, with accurate maps of the city and faithfully represented interiors and exteriors of existing buildings. Along the way you'll encounter several arcade-style games and obsta-

In *Manhunter*, Coney Island is but one of the New York landmarks you'll visit in your efforts to banish the oppressive Orbs from Earth.

ing it turns out to be a massive anticlimax.

It is 2004. Two years earlier, the sadistic "Orbs" invaded New York City, bringing life as it was known to a halt and designating certain humans as "Manhunters." These unfortunates must track down and report the names of fellow humans who have committed crimes against the Orb Alliance.

The premise is certainly compelling, but game play is for the most part rudimentary. If there's anything of interest in a given scene, the cursor alerts you to its presence when you scroll over it. This eliminates the frustration that comes from searching, but it makes each step far too obvious. Often you'll walk into a dazzling scene to find that there's only one thing to pick up or look at,

cles that provide a welcome challenge.

Like *Space Quest*, Sierra On-Line's superior cousin to *Manhunter*, the game concludes with a tag line about the upcoming episode in what turns out to be an ongoing series. If you're new to this kind of graphics-based adventure game, you may find *Manhunter* an ideal introduction, since it isn't nearly as challenging as some others. But be forewarned: a strong stomach is a prerequisite.

List Price: *Manhunter*, \$49.95; Hint Book, \$7.95. Requires: 256K RAM; CGA, EGA, MCGA, VGA, or Hercules graphics; DOS 2.0 or later. Copy protected through documentation. Sierra On-Line Inc., P.O. Box 485, Coursegold, CA 93614; (209) 683-4468.

Paperboy Takes You on The Route to Mischief

BY PHILIP F. H. ROSE

Are you worn out from racing along mountain roads in *Test Drive* and performing aerial acrobatics in *Advanced Flight Simulator*? Bored with outsmarting wizards and battling dragons? How about a career in newspaper delivery to relieve the stress of life? *Paperboy*, Atari's much-loved arcade classic, is now available for the PC from Mindscape at \$39.95.

The rules are simple. You have newspapers to deliver. There are houses on a street to deliver them to. Of course, there are a few snags along the way. Besides cars and pedestrians, you will encounter barking dogs, rolling hubcaps, and a hostile lawn mower that wants to cut more than the grass.

As you weave your way through these obstacles, you must try to deliver your newspapers to the correct houses, indicated by the word "subscriber" flashing in the bottom right corner of the screen. In the true spirit of the seedy video arcade, *Paperboy* sometimes rewards downright sleazy behavior. You get bonus points for "acciden-

tally" breaking the windows of nonsubscribers by throwing newspapers through them. The whole idea is to balance the use of your newspapers between real subscribers and these targets while you head for the next newspaper pickup.

Once you finish the day's deliveries, you get to knock off some more targets for bonus points as you stunt cycle along a dirt field. Your day's record is then tallied. Each subscriber whom you failed to deliver a newspaper to drops his subscription. If you lose too many subscribers, your boss may fire you—it's a dog-eat-dog world out there. But if you have done a good job and delivered to all of your subscribers, you pick up additional houses on your route. Each day, the number of obstacles you face increases, and the pace of the action picks up.

While the excitement level may never reach that of PC shoot-em-ups, *Paperboy* offers a nice change of pace. Game manufacturers should continue to look deep into the recesses of the arcade game past. They might find many other games worthy of revival on PCs. List Price: *Paperboy*, 39.95. Requires: 256K RAM, CGA or EGA, DOS 2.0 or later. Copy protected. Mindscape Inc., 3444 Dundee Rd., Northbrook, IL 60062; (312) 480-7667.

CIRCLE 648 ON READER SERVICE CARD

In *Paperboy* you must not fail to deliver the paper to a subscriber's house, no matter what obstacles block your way.

Portfolio Contest Tests Investment Skills, Without the Usual Risk

BY DONALD B. TRIVETTE

If you've always suspected that—given some cash—you could be another T. Boone Pickens, now's your chance. On June 1, The Source begins its fourth Portfolio Contest.

You start with \$100,000 to invest in securities. When the game ends on July 31, the folks at The Source will evaluate your portfolio. If your gains exceed those of the other contestants, you win \$1,000. And this thousand—unlike the \$100,000—is real, spendable money.

A stockbroker won the first Portfolio Contest by turning \$100,000 into \$350,000. An engineer (who *must* be considering a career change) picked up the \$1,000 in the second contest. Currently, the third contest is in progress.

As I write this, I'm heavily invested in options. With some extraordinary good luck, my portfolio will be at the top of the heap on March 31. In the meantime I've lost \$80,000, but it's not as devastating as it seems. The Source lets you create as

many \$100,000 portfolios as you want, so I've got several that are more conservative.

The Source offers some services to help you select your investments, whether they are part of the game or for real. Investext reports financial data and projections for major companies; Stockvue summarizes more than 4,300 stocks; and Vestor makes weekly recommendations and predictions.

The Portfolio Manager—the same one you'll use in the contest—is one of The Source's most powerful investment tools. It allows you to sort, print, and analyze your portfolios in a variety of ways, including gains and losses by period and holdings by tax lot.

The Source has agreed to pick up part of the tab for the fourth contest for *PC Magazine* readers. When you call to open an account, give the claim number 7800758, and The Source will waive its \$30 initiation fee and give you a \$15 credit. Who knows, maybe you'll win the fourth contest; I've got the third one sewn (loosely) up.

List Price: Fourth Portfolio Contest. Standard Source connect charges apply, based on time of day and bit-per-second rate. **Requires:** Modem, communications software. The Source, 1616 Anderson Rd., McLean, VA 22102; (800) 336-3366.

Fantavision animates simple drawings. In this example, the kite moves back and forth across the screen.

EDUCATION

Animation Generator Brings Drawings to Life

BY MATTHEW J. ROSS

Fantavision, from Broderbund's Creative Workshop Series, is a slick animation and special-effects generator. Designed for ages 8 to adult, it is a fun way to develop your child's artistic skills, and maybe even stimulate your own dormant creativity.

Using a mouse, you can draw up to 16 geometric objects, including squares, circles, and triangles, in a frame. These objects can be cut and pasted into different frames, rotated, and made larger or smaller with the zoom feature. After you create a series of different frames, *Fantavision* fills in the gaps, generating as many as 64 in-between frames, producing smoothly animated special effects.

Watch as your objects move across the screen, change colors, and spin. You may view your movie at different speeds, change an object's perspective from one frame to the next, and draw background images to create an eye-catching stage for your action.

After you've gotten the ef-

fects just right, pull down the Sound menu and select from several ready-made sounds: a dog's bark, a bird's chirp, or a laser's blast. Among other choices are "pops" and "creaks." *Fantavision* even allows you to customize your own sounds by specifying frequency and duration. Enter the sounds into the desired frames of your movie, hit GO, and see and hear your cinematic masterpiece come to life.

Fantavision's clear instructions and interface make this program easy to learn; you will be making simple special effects in an hour. A selection of impressive, ready-made movies and effects comes on an additional disk. See a polar bear cleverly drawn with stick figures. Watch an erupting volcano, or follow an eagle as it majestically swoops across your screen.

As with most art or drawing software, talent is required for really eye-catching results. This doesn't mean you can't have fun if you can't draw. Just don't expect to create Lucasfilm results if you don't have some artistic ability.

List Price: *Fantavision*, \$49.95.

Requires: 256K RAM, mouse, graphics adapter, DOS 2.0 or later. Not copy protected. Broderbund Software Inc., 17 Paul Dr., San Rafael, CA 94903; (415) 492-3200.

The Source's Fourth Portfolio Contest has facilities that allow you to track the progress (positive or negative) of the securities you "buy."

BEDFORD ACCOUNTING

(Bedford Software)

"The Perfect System for your Growing Business."

BEDFORD ACCOUNTING is a completely integrated accounting system that includes General Ledger, Payroll, Accounts Receivable, Accounts Payable, Inventory and Job Cost. Use each module as an independent software package...or combine modules to form your completely

coordinated accounting package.

BEDFORD allows for greater flexibility in your reports, supports a completely user defined chart of accounts, manual or computer produced checks (even for payroll), keeps track of full or partial payments by customers, allows you to make full or partial payments to vendors, and offers quick pop-up capability to let you look up accounts and inventory information.

The BEDFORD ACCOUNTING SYSTEM was judged to be PC Magazine's Editor's Choice in a review of 50 accounting packages conducted by Price Waterhouse. "This is truly a (complete accounting) system. Bedford's six modules...are easy to install, easy to use, and so well integrated with one another that it makes accounting a snap—even for non-accountants."

ON-LINE
SERVICESCompuServe Role-Playing Games:
A Respite from the Mundane World

BY BILL O'BRIEN

We've had fantasy for as long as we've been ourselves. A million years ago you could spark your mind by dreamily contemplating the latest cave drawings. Today, there is a whole universe—or, more accurately, there are many universes—of dungeons, dragons, good, and evil waiting for you on-line. The PC's telecommunications capability is the key to these vast realms.

Communications services like CompuServe and The Source bring formerly isolated dreamers together in what could

be called "gang fantasy." The frontiers of the imagination are explored by communities of connected users, united by nothing more than a phone line and the world of multiuser, on-line games.

Many such game theaters thrive on CompuServe, where perhaps the most-ardent players engage in role-playing games (RPGs). For the novice, relatively simple, maze-oriented RPGs like BlackDragon and the Island of Kesmai lead your character through dungeons, tunnels, gardens, and castles as you encounter all manner of challenges.

Throughout it all, your character's attributes (strength, intelligence, wisdom, stamina, luck, and so on) wax and wane according to the choices you make in dealing with your surroundings. These games provide relatively low-level graphics with slashes and brackets used to represent stairs and walls. Alphanumerics might represent creatures, treasures, or other objects of interest.

Gamers looking for more challenge can head for CompuServe's British Legends, a game where character creation is slightly more involved. Still based on maze theory, British Legends hosts a multiplayer scenario where you can interact with other CompuServe users' characters while exploring the countryside. You may talk to them, steal from them, or fight for or against them.

Camraderie and large-scale player interaction are rampant in British Legends—so much so that more-sophisticated players

may be put off by it. Scene descriptions, for example, often scroll off the screen as players communicate back and forth on topics hardly related to the adventure at all.

Still other games on CompuServe use the information service simply as a central meeting place for the players. Actual play takes place by mail, in

nied by a check to cover the cost of computer time used to analyze a move. Your ambition dictates the amount of money you'll spend, but Townsend has built some limits into Xenophobe that prevent the more affluent players from dominating the game through money alone.

The people who play the games are as interesting as the

Strategy, pre-planning, and intuition decide the outcome of confrontations in all CompuServe RPGs. Graphics are rare because of the variety of screen formats supported.

Example 8: GORM BIRD (a Confabulant) has two ships chasing in. MALLIE is in the zone and shooting defense only (DFO). MALLIE has a range of 20 feet. Defense only (DFO). This means that he and MALLIE will come in close on 500, or he decides to fire all weapons (page 8). Because he is not sure that MALLIE will be in about 10 or that time, he decides to also target GORM's 500 and eliminate 1 fire firing at MALLIE (page 10) time increment 100.

Chs	1,2,3,4,5	1	Chs	3,5	1
Sec. Mags	1,2	1	Sec. Mags	2	1
Mags	8	2	Time	10	1
Target:	MALLIE		Target:	MALLIE BIRD	

As you can see, there are 2 locations in which to make your firing orders. This allows you to split your firing between two ships on fire at different times of the same ship, while you may target a weapon to fire twice, it will only fire once (the first time that the firing criteria is met). If you are sure of your shots and you have seen that firing criteria, toward the target ship when the allotted time or range is reached, if the target will not fire.

Deluxe Edition

Your child can create original cartoons featuring everyone's favorite feline.

much the same way that chess can be played through the postal service.

Xenophobe is one such CompuServe game. In Xenophobe, a player decides which of several races (Terran and Alien) he wishes to be, and how many spaceships he wants. (Moderator Jim Townsend estimates that only about 3 percent of the players are women, hence the masculine pronoun.) Then the intrepid gamer sets off to conquer the Xenophobe universe.

That universe is vast and, after 2 years of play, mostly unexplored. The intensity of play is reflected in the game rules and procedures. Order a ship, for instance, and you must also fit it out with engines and a command center. Players can form trade and military alliances and establish colonies.

All of this is done, of course, by mail. Each turn is accompa-

nyed by a check to cover the cost of computer time used to analyze a move. Your ambition dictates the amount of money you'll spend, but Townsend has built some limits into Xenophobe that prevent the more affluent players from dominating the game through money alone.

Some players live through their real-world days just to get on-line and engage in their fantasy roles. After all, commanding a space army is a lot more fun than getting yelled at by the boss for losing a box of paper clips. CompuServe's role-playing games are one of the most exciting facets of the information service, because they link the PC community in a network limited only by the minds of the users.

List Price: CompuServe Role-Playing Games. Standard CompuServe rates; additional charges for some games. **Requires:** Modem, communications software. CompuServe, 5000 Arlington Centre Blvd., Columbus, OH 43220; (614) 457-8600.

☐ Please have a Dell representative call me.

1. Are you a (select one):

- A ☐ End user
- B ☐ Consultant
- C ☐ Reseller
- D ☐ Corporate Purchaser
- E ☐ DP/MIS Manager

4. How many PCs do you have installed now?

- A ☐ 1-10
- B ☐ 11-20
- C ☐ Over 21

2. Which products are you most interested in?

- A ☐ 286 architecture
- B ☐ 386 architecture

5. How many PCs do you (your company) plan to purchase in the next twelve months?

- A ☐ 1-10
- B ☐ 11-20
- C ☐ Over 21

3. Are you interested in computer products for:

- A ☐ Home
- B ☐ Business

6. Is your requirement:

- A ☐ Immediate
- B ☐ 1-3 Months
- C ☐ Over 3 Months
- D ☐ Info only

OUR SYSTEM 310 IS FASTER THAN A BAT OUT OF HELL.

If you've been looking at 386-based computers, you obviously feel the need for speed. Something the Dell System 310 delivers in spades.

In fact, the System 310 has more speed than even the most seasoned 386-users have come to expect.

Case in point, PC Labs benchmark tests. The 310 consistently outperformed the Compaq[®] 386/20e. Not to mention the IBM PS/2[®] Model 70-121. Leading one

reviewer to comment, "It's fast enough to burn the sand off a desert floor."

For us, however, fast enough is not enough.

By utilizing an Intel[®] 82385 Cache Memory Controller, page mode RAM and interleaved memory, the 310 not only delivers all that speed, but enough horsepower to do everything from CAD/CAM to megaspreadsheets to databases the size of the Manhattan Yellow Pages.

It even has the umph to work as a network file server.

TELL US WHAT TO DO NEXT.

As much as the Dell System 310 has to offer, it doesn't even begin to reach its full potential until after we've heard your input.

For it's only in this way that we're able to custom configure every 310. To give users exactly what they need. No more. No less.

Do a lot of spreadsheets? There's an optional Intel 80387 or WEITEK 3167 math coprocessor available.

Storage? You can have a 40 MB hard drive. Or choose a 90, 150, or 322 MB ESDI drive.

The System 310 comes standard with 1 MB of RAM. Want more? We can add as much as 8 MB to the system board. Still not enough? We can add still another 8 MB by installing a high-speed memory expansion board.

You can even run your 310 as either a MS-DOS[®], OS/2 or UNIX[®] system. It's your call.

The same holds true for monitors. You can choose between VGA mono or VGA Color Plus, for high resolution colors displayed on a larger screen.

The point here is that when you order a System 310, you not only get a 386-based system that's incredibly fast, powerful and versatile, but incredibly personal as well.

"You will have to look far and wide to find a better price performance package for the power-user lurking inside you."

(November 29, 1988)
